List of Tables	xi
List of Figures	xiii
Foreword by Daniel McFadden	xv
Acknowledgments	xix
1 Introduction	1
1.1 Product Differentiation and Discrete Choice Models	1
1.2 Some Basic Themes	5
1.3 Organization of the Book	10
2 Review of Discrete Choice Models	13
2.1 Introduction	13
2.2 Models with Discrete Responses	14
2.3 Foundations of Discrete Choice Models	17
2.4 Models with Stochastic Decision Rules	20
2.5 Models with Stochastic Utility	29
2.6 The Multinomial Logit	39
2.7 Generalizations of the Multinomial Logit	45
2.8 Stochastic Dependency among Alternatives	49
2.9 Conclusions	52
2.10 Appendix	53
3 The Representative Consumer Approach	63
3.1 Introduction	63
3.2 Discrete Choice Models and the Demand for Differentiated Products	66
3.3 Reinterpretation of Demand with a Continuum of Consumers	69
3.4 A Representative Consumer Theorem for Discrete Choice Models	70
3.5 The Multinomial Logit Representative Consumer	76
3.6 The Logit Representative Consumer with Endogenous Total Consumption	80
3.7 The CES Representative Consumer Model	85
3.8 Conclusions	90
3.9 Appendix	91

List of Figures

- 2.1 The probability function \mathbf{P} as a function of the stimulus s 16
- 2.2 Choice probabilities for the logit model for different values of μ 35
- 2.3 Domain of integration for the binary choice model 38
- 2.4 Alternative derivations of the multinomial logit model 43
- 2.5 Sequential choice for the nested multinomial logit model 47
- 3.1 Relations between LRUM and representative consumer models 76
- 4.1 Variant locations and market spaces for $m = 2$ and $n = 3$ 107
- 4.2 An illustration of the construction of $g(\underline{z})$ when $m = 2$ 112
- 4.3 Market space configuration when $m = 2$ and $n = 4$ 115
- 4.4 Illustration of the proof 127
- 5.1 The three main approaches to product differentiation 132
- 6.1 The circle model of product differentiation 152
- 6.2 The set of potential variants and consumer types 157
- 6.3 Replication of the number of potential variants and consumer types 158
- 6.4 Critical undercutting prices for the circle model 174
- 6.5 The graph of $H(\lambda)$ when $\beta = 6.5$ and $\beta = 8.5$ 177
- 6.6 The demand function x_i kinks at \bar{p}_i 180
- 6.7 Postentry equilibrium prices with immobile firms 193
- 6.8 The indivisible product case 203
- 6.9 The divisible product case 208
- 6.10 Demonstration that $n^z > n^e \Rightarrow n^p > n^e$ 208
- 6.11 Comparison of n^e , n^f , and n^z for constant budget share ARUM with uniform preference density 211
- 7.1 Equilibrium and optimum firm numbers for the logit model with outside alternative 233
- 7.2 Equilibrium and optimum integer numbers of firms for the logit model with outside alternative 234
- 7.3 The demand for network i in the presence of positive externalities for two values of μ 260
- 7.4 Determination of the solution to (7A.3) 265
- 7.5 The graph of functions F and G 271
- 8.1 Firm 1's demand for three different values of p_1 294

4	The Address Approach	101
4.1	Introduction	101
4.2	Description of the Address Model	102
4.3	An Address Theorem for Discrete Choice Models	105
4.4	Some Applications	118
4.5	The CES as an Address Model	121
4.6	Conclusions	125
4.7	Appendix	126
5	A Synthesis of Alternative Preference Foundations of Product Differentiation	131
5.1	Introduction	131
5.2	A Three-Way Synthesis	132
5.3	The Alternative Interpretations of the Hotelling Model	133
5.4	The Logit and CES Models	135
5.5	Comparison of Parameters: A Synthesis of the Alternative Approaches for the Logit and CES	138
5.6	Conclusions	139
6	Oligopoly with Product Differentiation	143
6.1	Introduction	143
6.2	Models of Product Differentiation	146
6.3	Existence of a Price Equilibrium	160
6.4	Properties of Short-Run and Long-Run Equilibria	185
6.5	Market Equilibrium and Optimum Product Diversity	197
6.6	Conclusions	212
6.7	Appendix	213
7	Oligopoly and the Logit Model	219
7.1	Introduction	219
7.2	The Basic Logit Oligopoly Model	221
7.3	Optimum and Equilibrium Product Diversity: The Logit and the CES	226
7.4	The Logit with an Outside Alternative	229
7.5	The Logit and Quality Choice	236

7.6	A Logit Model with Search	246
7.7	Multiproduct Oligopoly: A Nested Logit Approach	248
7.8	Network Externalities with Differentiated Products	257
7.9	Conclusions	262
7.10	Appendix	264
8	Product Selection, Location Choice, and Spatial Pricing	273
8.1	Introduction	273
8.2	Locational Competition	275
8.3	Product Selection and Price Competition	291
8.4	Spatial Price Policies and Location	320
8.5	Conclusions	340
9	Spatial Competition and the Logit Model	343
9.1	Introduction	343
9.2	Probabilistic Discrete Choice Approach and Spatial Competition	344
9.3	Competition over Locations	351
9.4	Location Choice under Mill Pricing	363
9.5	Market Equilibrium and Optimum under Alternative Spatial Price Policies	375
9.6	Conclusions	384
9.7	Appendix	385
10	Further Directions	393
	Glossary	399
	References	401
	Index	417

- 8.2 Firm 1's profit as a function of its own price 294
- 8.3 Firm 1's best-reply function $p_1(p_2)$ with linear transport costs 296
- 8.4 Equilibrium mill prices and locations for nine firms 300
- 8.5 Collusive prices as a function of z_1 305
- 8.6 Market segmentation of consumer types under vertical differentiation 307
- 8.7 Firm 1's profit as a function of its own price 308
- 8.8 Cost and preferences for which the finiteness property does not hold 314
- 8.9 Delivered price schedule for discriminating spatial monopoly 321
- 8.10 Comparison of spatial price policies for monopoly 323
- 8.11 Equilibrium delivered price schedule under spatial price discrimination 327
- 8.12 Mill pricing versus spatial discriminatory pricing for duopoly equilibrium 331
- 9.1 Construction of local choice probabilities 348
- 9.2 Equilibrium locations as a function of $\mu/\tau l$ when $n = 3$ 355
- 9.3 Equilibrium locations as a function of $\mu/\tau l$ when $n = 4$ 356
- 9.4 Equilibrium locations as a function of $\mu/\tau l$ when $n = 6$ 358
- 9.5 Derivation of the optimal locations when $n = 2$ 361
- 9.6 Optimum locations as a function of $\mu/\tau l$ when $n = 6$ 362
- 9.7 The domains \mathcal{D}_i and firm 1's best-reply function 366
- 9.8 Firm 1's profit function for $\mu = 0$ and μ positive and large 367
- 9.9 Critical values $\bar{\mu}/\tau l$ and $\hat{\mu}/\tau l$ as a function of z_1/l 368
- 9.10 Equilibrium and optimum locations as a function of $\mu/\tau l$ for linear transportation costs 370
- 9.11 Equilibrium and optimum locations as a function of $\mu/\tau l^2$ for quadratic transportation costs 373
- 9.12 Firm 1's equilibrium price schedules for different values of $\mu/\tau l$ 379
- 9.13 Equilibrium and optimum locations as a function of $\mu/\tau l$ 380
- 9.14 Equilibrium profits under alternative price policies for $z_1/l = 0.3$ 380
- 9.15 Optimum and equilibrium locations under M , U , and D policies 383
- 9.16 Illustration of the proof 391

List of Tables

- 5.1 Alternative interpretations of the key parameters and variables for the logit 140
- 5.2 Alternative interpretations of the key parameters and variables for the CES 140
- 7.1 Comparison of equilibrium and optimum for the simple logit model 226
- 7.2 Comparison of equilibrium and optimum for the simple CES representative consumer with $\mu = (1 - \rho)/\rho$ 227
- 7.3 Comparison of equilibrium and optimum for the logit model with an outside alternative, $\mathbf{P}^* = [n + \exp(V_0 + p^*)/\mu]^{-1}$ 232
