Contents

Preface vii
Foreword ix

PART I – INVESTMENT MATHEMATICS 1

Chapter 1 Compound interest 3
Andrew Adams

Chapter 2 Fixed-interest bonds 21
Andrew Adams

Chapter 3 Equities and real estate 39
Andrew Adams

Chapter 4 Real returns 53
Philip Booth

Chapter 5 Index-linked bonds 67
Philip Booth

Chapter 6 Foreign currency investments 81
Philip Booth

Chapter 7 Solution of equations by numerical approximation techniques 95
Peter England

PART II – STATISTICS 111

Chapter 8 Data collection and presentation 113
Della Bloomfield

Chapter 9 Descriptive statistics 141
Della Bloomfield

Chapter 10 Probability 153
Della Bloomfield

Chapter 11 Some important probability distributions . . . 177
Della Bloomfield

Chapter 12 Confidence intervals and hypothesis testing . . . 193
Della Bloomfield

Chapter 13 Correlation and regression 207
Della Bloomfield

PART III – ADVANCED APPLICATIONS 235

Chapter 14 Portfolio theory 237
Andrew Adams

Chapter 15 Market indices and portfolio performance measurement . 259
Andrew Adams

Chapter 16 The mathematics of bond investment policy . . 281
Philip Booth

Chapter 17 Bond anomalies 293
Philip Booth

Chapter 18 Curve fitting 303
Peter England

Chapter 19 Theoretical pricing of forward and futures contracts . . 325
Peter England

Chapter 20 Theoretical pricing of options 337
Peter England

Chapter 21 The stochastic approach to the theory of interest . . 369
Philip Booth

Compound interest tables 385
Student's t distribution: critical points 395
Areas in the right-hand tail of the normal distribution . . . 396
