List of figures		*page* xiii
List of tables		xiv
Preface		xvii
List of conference participants		xix
Part One: Introduction		1
1 European trade and welfare after '1992'		3
L. Alan Winters		
1	Introduction	3
2	The 'official' estimates	4
3	Refining the estimates	9
4	Recent advances – a summary of the volume	14
5	Some policy conclusions	26
Part Two: General equilibrium analyses		33
2 '1992': trade and welfare – a general equilibrium model		35
Michael Gasiorek, Alasdair Smith and Anthony J. Venables		
1	Introduction	35
2	The model	36
3	Data and calibration	40
4	Quantity changes	45
5	Factor prices	49
6	The welfare consequences of '1992'	50
7	Alternative experiments and assumptions	57
8	Concluding comments	59
	Appendix: The model	61

Discussion 63
Larry S. Karp

Global production effects of European integration 67
Jan I. Haaland and Victor D. Norman
1 Introduction 67
2 Model structure 69
3 Data and calibration 72
4 Effects of EC integration 76
5 Effects of EEA 80
6 Conclusions and extensions 85
Appendix: Cournot competition in integrated markets 86
Discussion 89
Richard E. Baldwin

The integration of financial services and economic welfare 92
Cillian Ryan
1 Introduction 92
2 The theoretical model 93
3 Calibration 96
4 Modelling '1992' 101
5 The results 102
6 Sensitivity analysis 112
7 Conclusions 114
Appendix: Calibration 116
Discussion 118
Jacob Kol
1 Introduction 118
2 Model and analysis 119
3 Additional elements 119
4 Conclusions 120

Part Three: Modelling market integration – partial equilibrium 123

Market integration, competition, and welfare 125
Jan I. Haaland and Ian Wooton
1 Introduction 125
2 The model 127
3 Effects of integration 133
4 Numerical examples 138
5 Conclusions 144

Discussion 147
Konstantine Gatsios

6 Pharmaceuticals: who's afraid of '1992'? 150
Gernot Klepper
1 Introduction 150
2 Industry and market structure 151
3 A model of price discrimination, price controls, and arbitrage 156
4 Welfare effects 165
5 The likely impact of harmonisation 167
Discussion 170
Damien Neven

Part Four: Trade and industrial policy 173

7 Integration, trade policy and European footwear trade 175
L. Alan Winters
1 Introduction 175
2 The structure of the model 176
3 Calibration 182
4 Spain and Portugal 187
5 Korea and Taiwan 188
6 Eastern Europe 193
7 Sensitivity 199
8 Conclusion 199
Appendix: Additional data and results 201
Discussion 209
Kym Anderson

8 The long-run value of inflexibility 213
Larry S. Karp and Jeffrey M. Perloff
1 Introduction 213
2 The main idea 214
3 The model 217
4 Simulations 223
5 Multiple targets 225
6 Industrial policies 226
7 Conclusions 227
Discussion 231
Harry Flam

Part Five: Empirical evidence 235

9 Macroeconomic import functions with imperfect competition: an application to EC trade 237
Joaquim Oliveira-Martins and Joël Toujas-Bernate
1 Introduction 237
2 Macro trade functions and imperfect competition 238
3 Empirical implementation 242
4 Simulation of the effects of the '1992' market integration 252
5 Summary and conclusions 256
Appendix 1: Sources of the data 259
Appendix 2: Derivation of the parameters of the demand system from the Morishima elasticities 260
Discussion 263
Lars-Hendrik Röller

10 Bilateral trade elasticities for exploring the effects of '1992' 266
Paul A. Brenton and L. Alan Winters
1 Introduction 266
2 The model of demand 267
3 Estimation and extensions 269
4 The '1992' experiments 270
5 The data 271
6 Results from applying the Almost Ideal Demand System 272
7 An alternative demand system 275
8 Implications and conclusions 279
Appendix: Estimates of the elasticity of substitution 281
Discussion 285
Riccardo Faini

Index 289

Figures

		page
3.1	Structure of the model	68
3.2	Factor price used in calibration (EC = 1)	77
5.1	Relative effects of market integration, tariff equivalent = 0.5, 2 countries, 1 firm per country	141
5.2	Relative effects of market integration, tariff equivalent = 0.5, 2 countries, 2 firms per country	142
5.3	Relative effects of market integration, tariff equivalent = 0.5, elasticity = 2, total number of firms = 6	142
6.1	Third degree price discrimination with price controls	157
6.2	Third degree price discrimination with arbitrage	160
6.3	Price discrimination with arbitrage and price controls	161
6.4	Reaction functions under different arbitrage opportunities in market 1	163
6.5	Reaction functions under different arbitrage opportunities in market 2	164
6.6	Changes in arbitrage under price controls	166
7.1	The hierarchies of supply and demand	181
8.1	Adjustment costs (γ, a and σ positive)	218
8.2	Adjustment costs ($\gamma = 0$, a and σ positive)	219
10.1	Typical hierarchy for estimation	269

Tables

2.1	Industry data	*page* 42
2.2	Segmented markets – % change in production and external trade	46
2.3	Integrated markets – % change in production and external trade	48
2.4	Segmented markets – % change in factor prices	49
2.5	Integrated markets – % change in factor prices	50
2.6	Welfare changes with equal-sized policy experiment	51
2.7	Segmented markets – breakdown of welfare gains (A) as % of total welfare gains in each industry with free entry	52
2.8	Segmented markets – breakdown of welfare gains (B) as % of total welfare gains in each industry with free entry	53
2.9	Integrated markets – breakdown of welfare gains (A) as % of total welfare gains in each industry with free entry	56
2.10	Integrated markets – breakdown of welfare gains (B) as % of total welfare gains in each industry with free entry	56
2.11	Distribution of welfare gains by industry in the long run	58
2.12	Welfare changes with differential policy experiment and with sub-industries = 1	59
3.1	Input characteristics	73
3.2	Market characteristics	74
3.3	Initial pattern of production, value added shares of GDP	75
3.4	Effects on production, prices and welfare of EC integration	78–9
3.5	Differential effects of EEA	81–2
3.6	Total effect on production of EC integration and EEA	84
4.1	Relative efficiency of financial intermediaries in short-run markets	103
4.2	Gains from equalising efficiencies in the short-run market with factor redistribution	105
4.3	Gains/losses from the integration of the EC market	107

4.4	Gains from equalising efficiencies in the long-run model	109
4.5	Changes in borrowing and lending in the integrated long-run market in 1988	111
4.6	Net inter-country borrowing and lending as a result of long-run market integration in 1988	112
4.7	Total gains from equalising efficiencies in domestic markets	113
5.1	Share difference, $\gamma \equiv s_h - s_{eq}$, $m = 1$, $n = 1$, $t = 0$	136
5.2	The effects of integration, % change from segmented equilibrium, elasticity of substitution, $\sigma = 2$; $\sigma = 5$	139
5.3	The effects of integration, % change from segmented equilibrium, $T = 0.5$, $t = 0.1$, $m = 1$	143
6.1	Estimation of relative drug prices from different studies	152
7.1	Classification and acronyms	177
7.2	Elasticities for base runs	183
7.3	The main European quantitative restrictions on footwear imports, 1987	184
7.4	Initial quota rent wedges	186
7.5	The accession of Spain and Portugal	188
7.6	Quantitative restrictions on Korea and Taiwan, quantities	189
7.7	Quantitative restrictions on imports from Korea and Taiwan, effects on output and imports	190
7.8	Quantitative restrictions on imports from Korea and Taiwan, effects on welfare and trade	192
7.9	Liberalising imports from Eastern Europe and the world, effects on output and imports	195
7.10	Liberalising imports from Eastern Europe and the world, effects on welfare and trade	196
7A.1	The EC footwear industry, 1985–7	201
7A.2	Coefficients of variation, 1987	202
7A.3	Basic data	203–6
7A.4	Sensitivity analysis, welfare effects	207
8.1	Optimal specific and *ad valorem* policies	223
8.2	Present value of transfers from taxpayers to the home firm as % of domestic welfare	225
9.1	Results of pooled regressions	243
9.2	Tests for the dimension and the structure of the cointegration space between the logarithms of market share and price competitiveness	245
9.3	Comparison between the homogeneous and the differentiated product model	247
9.4	Estimates for the French market, 1965–87	248
9.5	Estimates for the German market, 1965–87	249

9.6	Estimates for the UK market, 1965–87	250
9.7	Estimates for the Italian market, 1969–87	251
9.8	Matrix of partial elasticities of substitution, 1987	253
9.9	Matrix of average partial elasticities of substitution, 1987	255
9.10	Results of the simulations, textiles and leather	256
9.11	Results of the simulations, chemical products	257
9.12	Results of the simulations, electrical goods	258
9A.1	Primary sources for production data	259
9A.2	Correspondences between the CITI, Nace–Clio and BDS classifications	259
10.1	Summary of results from Almost Ideal Demand System applied to 70 West German manufacturing industries	273
10.2	Summary of results from Almost Ideal Demand System applied to 15 Italian manufacturing industries	274
10.3	Summary of results from CES Demand System applied to 15 West German and Italian manufacturing industries	277
10A.1	Estimates of the elasticity of substitution	281
D10.1	Import penetration ratios in Italy	287
