Foreword	v
Preface	vii
Introduction	1

Part I Setting the stage

Chapter 1 From past to present 6

1.1	Origins of process hazards	7
1.2	Toxic hazards of ancient metals	8
1.3	Changing attitudes to health and safety in chemical education	11
1.4	Insurance losses in the US chemical industry	12
1.5	Recent UK experience	16
1.6	Vapour cloud explosions (VCEs) and other major world losses in the hydrocarbon-chemical industries	19

Chapter 2 Laws, codes and standards 27

2.1	Present international trends	27
2.2	The UK background	29
2.3	The Health and Safety at Work etc. Act 1974 (HSWA)	32
2.4	Legislation on the Control of Major Hazards	33
2.5	Other relevant legislation and its problems	35
2.6	The law and public inquiries into major accidents	39
2.7	The role of standards	43
2.8	Levels of standards	44
2.9	Safety standards and codes of practice	46

Chapter 3 Meanings and misconceptions 49

3.1	Units and nomenclature	49
3.2	Meanings of health and safety terms used	51
3.3	Misconceptions and disasters	54

Chapter 4	Flixborough and its lessons	60
4.1	Process description and normal start-up	60
4.2	Conditions during start-up on 1 June 1974	64
4.3	Possible causes for the failure of the by-pass assembly	66
4.4	The court's views on the immediate cause of the disaster	66
4.5	The pressure rises and their cause	67
4.6	What caused the earlier failure of R5?	69
4.7	Organisational misconceptions	70
4.8	Lessons to be learnt	71
Chapter 5	Four other major accidents	75
5.1	The explosion at Shell's Pernis refinery in 1968	76
5.2	The Explosion at Dow Chemical Company's factory at King's Lynn, 27 June 1976	79
5.3	The 'Dioxin' release at Seveso on 10 July 1976	83
5.4	The Bhopal disaster in December 1984	89
Part II	Hazards – chemical, mechanical and physical	
Chapter 6	Electrical and other physical hazards	101
6.1	General electrical hazards	101
6.2	Electrical ignition hazards	103
6.3	Static electricity (including lightning)	107
6.4	Physical hazards involving liquids	114
Chapter 7	Health hazards of industrial substances	123
7.1	Occupational health professionals	126
7.2	How harmful substances attack us	129
7.3	Effects on body organs	132
7.4	Units and classes of toxicity	134
7.5	Occupational Exposure Limits (OELs)	135
7.6	Sources of exposure to airborne substances hazardous to health	138
7.7	Monitoring the working environment for toxic substances	142
7.8	Substances hazardous to health, and the law	150
7.9	Treatment of affected persons	152
7.10	How does one decide if a disease is occupational?	153
Chapter 8	Chemical reaction hazards	156
8.1	Reactivities of the elements and structural groupings	156
8.2	Reaction rate	160
8.3	The power of reactions	162
8.4	Inorganic reactions	163
8.5	Some hazardous organic reactions and processes	164

8.6	Reactivity as a process hazard	172
8.7	Self-heating hazards of solids	183
8.8	Reactive substances and CIMAH Regulations 7 to 12	189
Chapter 9	Explosion hazards of process materials	193
9.1	Explosive deflagrations and detonations	193
9.2	Industrial chemicals with explosive potential	194
9.3	Structural groups which confer instability	195
9.4	Preliminary screening of materials for explosivity	199
9.5	Thermochemical screening	199
9.6	Stability and sensitivity tests	206
9.7	Classification of materials with explosive potential	208
9.8	Explosions of industrial chemicals outside the explosives industry	208
9.9	Features of the explosives industry and the Explosives Acts of 1875 and 1923	213
9.10	Explosives and CIMAH Regulations 7–12	217
Chapter 10	Flammability, fires, and explosions involving air	221
10.1	NFPA flammability classification of materials	222
10.2	Parameters of flammability (mainly for gases and vapours)	224
10.3	Flammability and CIMAH Regulations 7–12	231
10.4	Flammable dusts and explosive dust clouds	232
10.5	Liquid and vapour fires and aerial explosions	238
Chapter 11	Corrosion hazards and control	251
11.1	Acceptable corrosion rates	253
11.2	Galvanic corrosion	254
11.3	Corrosion of iron and steel in aqueous media	257
11.4	Other types of metal corrosion	260
11.5	Passivation	266
11.6	Corrosion-resistant metals and alloys	266
11.7	Examples of industrial corrosion problems	270
11.8	Notes on 'corrosion' of non-metals	271
Chapter 12	Fire and explosion hazard rating of process plant	275
12.1	The Dow Fire and Explosion Hazard Index, third edition	276
12.2	The Mond Index	287
12.3	Plant layout and unit hazard rating	294
12.4	Maximum probable property damage from vapour cloud explosions (VCEs)	298
Chapter 13	Hardware hazards	305
13.1	Mechanical causes of metal failure	305
13.2	General hazards of moving machinery	310

- 13.3 Common hazards of rotary machines 314
- 13.4 Centrifuges 319
- 13.5 Mixers 323
- 13.6 Pumps 326
- 13.7 Compressors 328

Part III Hazard control in design and maintenance

- Chapter 14 Reliability and risk analysis 336**
 - 14.1 Introduction to reliability 336
 - 14.2 Process equipment reliability 357
 - 14.3 Risk analysis and its scope 363
 - 14.4 Fault trees 364
 - 14.5 Truth tables and event trees 371
 - 14.6 Consequences of accidental releases 374
 - 14.7 Risks to life – quantification and levels of acceptability 376
- Chapter 15 Active protective systems and instrumentation 381**
 - 15.1 Overpressure relief – general 381
 - 15.2 Pressure-relief devices and definitions 382
 - 15.3 Causes of overpressure 385
 - 15.4 Calculation of individual relieving rates 388
 - 15.5 Disposal of released fluids 389
 - 15.6 Other means of pressure-relief 393
 - 15.7 Instrumentation for control and safety 393
 - 15.8 Component features of instrumentation 397
 - 15.9 Features of PES systems used for control and safety 423
 - 15.10 Hazards of instrument maintenance and modifications 427
- Chapter 16 Designing for safety 429**
 - 16.1 Checklists 430
 - 16.2 Pre-sanction planning and preliminary hazard studies 432
 - 16.3 Design organisation and parties involved 434
 - 16.4 Process engineering 438
 - 16.5 Process engineering hazards and Hazard Study III 445
 - 16.6 Other design activities 450
 - 16.7 Hazard Studies IV to VI 474
 - 16.8 Computer-aided design (CAD) 475
- Chapter 17 Maintenance and inspection 478**
 - 17.1 Maintenance 479
 - 17.2 Pre-operational inspection 492
 - 17.3 In-service inspection 494
 - 17.4 Non-destructive testing (NDT) 498
 - 17.5 Condition Monitoring (CM) 503
 - 17.6 Pressure, leak and acoustic emission testing 507

Chapter 18 Safe work permits 511

- 18.1 Why permits are needed 511
- 18.2 Principles of permit systems 512
- 18.3 Permits for maintenance 513
- 18.4 Outline of the Dow system 515
- 18.5 Precautions before issuing a permit 520
- 18.6 Practical preparations for maintenance 523
- 18.7 Entry into confined spaces 528
- 18.8 Other permits and certificates used 531
- 18.9 Pitfalls that must be avoided 532

Part IV Management, production and related topics**Chapter 19 Management for health and safety (HS) 535**

- 19.1 Management's responsibilities for health and safety (HS) 537
- 19.2 HS programmes and their elements 549
- 19.3 Special management problems 561
- 19.4 Computers and safety 565

Chapter 20 Commissioning, operation and emergency planning 569

- 20.1 Commissioning 570
- 20.2 Plant operation 578
- 20.3 Planning for major emergencies 586

Chapter 21 Safety training for process workers 597

- 21.1 Training aims and framework 598
- 21.2 On-the-job training 601
- 21.3 Training media and methods 607
- 21.4 Training for special safety responsibilities 611

Chapter 22 Personal protection in the working environment 618

- 22.1 Standards for PPC/E 620
- 22.2 Comfort and body protection 621
- 22.3 Hand protection 628
- 22.4 Head protection 630
- 22.5 Standing work and foot protection 632
- 22.6 Vision and eye protection 633
- 22.7 Noise and hearing protection 638
- 22.8 Breathing and respiratory protection 640
- 22.9 Other personal hazards 647

Chapter 23 Hazards in the transfer of technology (TT) 651

- 23.1 Definitions and historical introduction 651
- 23.2 The ILO code of practice 653

23.3	Examples of the spread of hazardous technologies	660
23.4	Problems of culture, communication and language	661
23.5	Problems of standards in developing countries	662
23.6	Uganda 1976	664
23.7	Important lessons for technology importers	667

Appendices

A	Process industries in the UK and numbers employed	670
B	NFPA classification of hazardous materials	674
C	Material safety data sheets	677
D	Vapour cloud explosions up to 1983	679
E	Largest losses in the hydrocarbon/chemical industries 1958-1987	684
F	Some details given in the CPL regulations and approved list	690
G	Some details of the COSHH regulations and Approved Codes of Practice	695
H	Important Codes of Practice and British Standards	697
J	Questionnaire for designers to ensure safe maintainability	700
K	A checklist to test the safety policy statement	704
L	A summary of incidents which have to be reported under RIDDOR	709
M	Sources of HS training and information (mainly UK)	712
N	Standards (mainly British) relating to personal protective equipment and clothing	731
O	Factors to be considered in setting up industries and transferring technologies to tropical and sub-tropical regions	734
P	Ergonomic and anthropometric factors to be considered in setting up industries and transferring technologies	735
	List of abbreviations	736
	Index	741
