List of Contributors	xxvii
PART I MODEL FORMULATION AND ANALYSIS	
Chapter 1 From Influence to Relevance to Knowledge	3
<i>R. A. Howard</i>	
1.1 The components	4
1.1.1 Decision and chance nodes	4
1.1.2 Arrows	4
1.1.3 Deterministic nodes	5
1.1.4 Value node	5
1.2 The decision diagram	6
1.3 Relevance	6
1.3.1 Deterministic relevance	8
1.4 Influence	9
1.4.1 Information/influence confusion	9
1.4.2 Deterministic influence	10
1.5 Special cases	10
1.5.1 Relevance diagrams	10
1.5.2 Deterministic diagrams	10
1.6 Use in decision analysis cycle	10
1.6.1 Conversational use	11
1.6.2 Defining the kinds of distinction—the clarity test	11
1.6.3 Defining relationships	11
1.6.4 Deterministic sensitivity	11
1.6.5 Probability assessment and stochastic sensitivity	12
1.7 The effect of influence on value of clairvoyance	12
1.7.1 Canonical form	13
1.7.2 Example—Shirley's party	14
1.7.3 The rules of the clairvoyance game	16
1.7.4 Inheritance of influence	16
1.8 Knowledge maps	17

1.8.1	Evocative and assessed knowledge maps	17
1.8.2	Redundant knowledge maps	18
1.8.3	Disjoint knowledge maps	19
1.9	Value diagrams	20
1.10	Conclusion	21
1.11	Discussion	22
1.11.1	Discussion by Lawrence D. Phillips	22
	References	23
Chapter 2	Using Influence Diagrams to Value Information and Control	25
	<i>J. E. Matheson</i>	
2.1	Introduction	25
2.2	The primary decision	26
2.3	Value of perfect information	27
2.4	The concept of clairvoyance	30
2.5	Clarifying value of clairvoyance using influence diagrams	32
2.6	Using the basic influence diagram	39
2.7	The value of perfect control	42
2.8	Conclusions	45
2.9	Discussion	47
2.9.1	Discussion by Richard E. Barlow	47
	References	48
Chapter 3	Complexity, Calibration and Causality in Influence Diagrams	49
	<i>T. P. Speed</i>	
3.1	Introduction	49
3.2	Complexity of influence diagrams	51
3.3	Calibration of influence diagrams	53
3.4	Causality and influence diagrams	54
3.5	Discussion	58
3.5.1	Discussion by J. Q. Smith	58
3.5.2	Discussion by Carlos Pereira	59
3.5.3	Reply	61
	References	62
PART II THEORETICAL FOUNDATIONS		
Chapter 4	The Logic of Influence Diagrams	67
	<i>J. Pearl, D. Geiger and T. Verma</i>	
4.1	Introduction and summary of results	67

4.2	Soundness and completeness	70
4.2.1	The d -separation criterion	70
4.2.2	Conditional independence and its graphical representations	71
4.2.3	The main results	73
4.2.4	Deterministic nodes and D -separation	74
4.2.5	Strong completeness	75
4.2.6	Other completeness results	76
4.3	Corollaries	77
4.4	Applications	79
4.4.1	Entailment and equivalence	79
4.4.2	Arc reversal and node removal	81
4.4.3	Information required	82
4.5	Discussion	83
4.5.1	Discussion by Herman Rubin	83
4.5.2	Reply	84
	References	86
Chapter 5	Statistical Principles on Graphs	89
	<i>J. Q. Smith</i>	
5.1	Introduction	89
5.2	General conditional independence on graphs	90
5.2.1	Linear systems, weak $\perp\!\!\!\perp \cdot \cdot$	91
5.2.2	Parametrized family conditional c.i.	92
5.2.3	Decision system c.i.	93
5.3	Why we should expect the information hypotheses to hold	94
5.3.1	Violating P1 by estimating variables you already know	94
5.3.2	Violating P2 and symmetry of information	94
5.3.3	Assumption P2 and paradoxes of non-conglomerability	95
5.3.4	Simpson's paradox and P3	97
5.4	Influence diagrams and graphs of conditional independence	98
5.5	Conditional independence and the role of parameters in Bayesian inference	100
5.6	Separable likelihoods, cliques and orthogonal designs	102
5.7	Non-linear extensions of state-space forecasting	106
5.8	Observability of state-space models—a general definition	109
5.9	Problems and limitations in using influence diagrams and beyond	111

5.10	Conclusions	113
5.11	Discussion	113
5.11.1	Discussion by David J. Spiegelhalter	113
5.11.2	Discussion by Carlos Pereira	116
5.11.3	Discussion by R. E. Barlow	117
5.11.4	Reply	118
	References	119

Chapter 6 Construction and Local Computation Aspects of Network Belief Functions **121**

A. P. Dempster

6.1	Formulation	121
6.2	Model construction	125
6.3	Inferential computation	131
6.4	Discussion	136
6.4.1	Discussion by Lotfi A. Zadeh	136
	References and related publications	139

Chapter 7 Influence and Belief Adjustment **143**

M. Goldstein

7.1	Introduction	143
7.2	Belief structures and influence diagrams	144
7.2.1	Belief specification: prevision	144
7.2.2	Belief structures and nodes of influence diagrams	145
7.2.3	Belief adjustment	146
7.2.4	Separation by belief adjustment	147
7.2.5	Influence diagrams for belief structures	149
7.3	Belief transforms and the simplification of knowledge maps	150
7.3.1	Example	150
7.3.2	Belief transforms: notation	151
7.3.3	Belief transforms: eigenstructure	152
7.3.4	Belief transforms: further properties	153
7.3.5	Separating belief structures by eigenvectors	154
7.3.6	Example continued	154
7.4	Quantifying influence	156
7.4.1	Trace quantification	156
7.4.2	The length of a belief adjustment	157
7.4.3	Data trajectories: stepwise trace	158
7.4.4	Splitting the heart of a transform	160
7.4.5	Labelling knowledge maps	160

7.4.6 Example	162
7.5 Concluding comments	167
7.6 Discussion	168
7.6.1 Discussion by Herman Rubin	168
7.6.2 Reply	169
References	173

PART III PROBLEMS AND APPLICATIONS: INDUSTRIAL

Chapter 8 Informative Sampling Methods: The Influence of Experimental Design on Decision	177
<i>R. E. Barlow, T. Z. Irony and S. W. W. Shor</i>	
8.1 Introduction	177
8.2 Record search procedure	178
8.3 Conditional probability distributions	179
8.4 The influence of the experimental design on decision: influence diagrams	181
8.5 Numerical results	185
8.6 Discussion	188
8.6.1 Discussion by Kjell A. Doksum	188
8.6.2 Reply	191
References	191
Appendix I	192
Appendix II	194
Appendix III	197
Chapter 9 Real Time Influence Diagrams for Monitoring and Controlling Mechanical Systems	199
<i>A. M. Agogino and K. Ramamurthi</i>	
9.1 Introduction	199
9.2 Sensor-based real time expert systems	200
9.2.1 Management of uncertainty	201
9.2.2 Representing conditional independence with influence diagrams	201
9.3 Unattended milling machine problem	203
9.4 Sensor-based influence diagrams	205
9.4.1 The diagnostician's problem	205
9.4.2 IDES implementation	206
9.4.3 IDES greedy decision algorithm (topological solution of controller's problem)	208
9.5 Milling machine monitoring and control	214

9.5.1	Feature identification and extraction	215
9.5.2	Sensor fusion	219
9.6	Development and tuning	221
9.7	Results	221
9.8	Research extensions	222
9.9	Discussion	224
9.9.1	Discussion by Jack Breese	224
9.9.2	Reply	225
	References	226

Chapter 10 Multi-target Tracking using Influence Diagram Models **229**

C. R. Kenley and T. R. Casaletto

10.1	Introduction	229
10.2	Two-object, linear-motion cluster model	230
10.3	Sensitivity analysis of the two-object, linear-motion model	236
10.4	Empirical test results	238
10.5	Conclusions	247
10.6	Discussion	248
10.6.1	Discussion by Terry Speed	248
10.6.2	Reply	250
	References	251

Chapter 11 A Socio-technical Approach to Assessing Human Reliability **253**

L. D. Phillips, P. Humphreys, D. Embrey and D. L. Selby

11.1	Background	253
11.2	Introduction	255
11.2.1	Requisite models	255
11.2.2	Modeling human error rates	256
11.2.3	Validity of assessments	257
11.3	The STAHR influence diagram	258
11.3.1	The influences	258
11.3.2	The STAHR procedure	263
11.4	Group processes	267
11.5	The field tests	269
11.5.1	Prior preparation	269
11.5.2	Introduction	269
11.5.3	Practice session	270
11.5.4	Application of STAHR	271
11.6	Discussion	272
11.7	Conclusion	273

11.8	Discussion	274
11.8.1	Discussion by Ward Edwards	274
	References	275
Chapter 12	Bayesian Updating of Event Tree Parameters to Predict High Risk Incidents	277
	<i>R. M. Oliver and H. J. Yang</i>	
12.1	Introduction and background	277
12.2	Safety studies, event trees and severity classification	278
12.3	An influence diagram	280
12.4	Separable updating theorem	282
12.4.1	Separable updating theorem for branch probabilities	283
12.5	Binomial likelihoods	284
12.6	Beta priors	286
12.7	Numerical example	286
12.8	Conclusion	290
12.9	Discussion	291
12.9.1	Discussion by Nora Smiriga	291
12.9.2	Discussion by A. P. Dempster	291
12.9.3	Discussion by Ross D. Shachter	292
12.9.4	Reply to A. P. Dempster	293
12.9.5	Reply to Ross D. Shachter	294
	References	296
Chapter 13	Using Influence Diagrams in Multiattribute Utility Analysis—Improving Effectiveness through Improving Communication	297
	<i>M. W. Merkhofer</i>	
13.1	Introduction	297
13.2	Multiattribute utility analysis of health and environmental problems	298
13.3	Influence diagrams	299
13.4	Benefits of using influence diagrams	303
13.5	Using influence diagrams to facilitate the identification of decision objectives	304
13.6	Using influence diagrams to establish attribute measurement scales	306
13.7	Using influence diagrams to facilitate quantifying uncertainty over attributes	307
13.8	Using influence diagrams to compute expected utilities and perform sensitivity analysis	312

13.9	Conclusions and summary	313
13.10	Discussion	313
13.10.1	Discussion by G. A. Vignaux	313
	References	316

PART IV PROBLEMS AND APPLICATIONS: MEDICAL

Chapter 14 An Influence Diagram Approach to Medical Technology Assessment **321**

R. D. Shachter, D. M. Eddy and V. Hasselblad

14.1	Introduction	321
14.2	The medical technology assessment problem	323
14.3	The influence diagram model	326
14.3.1	Parameter variables	327
14.3.2	Experimental evidence	328
14.3.3	Additional assumptions	329
14.4	Formulation example	330
14.4.1	The problem	330
14.4.2	Chains	331
14.4.3	Completing the formulation	332
14.5	Adjustments to parameters	336
14.5.1	Mathematical framework for adjustment	336
14.5.2	Specific adjustments	338
14.5.3	Summary	340
14.6	Solution methods	341
14.7	Conclusions	343
14.8	Discussion	345
14.8.1	Discussion by David J. Spiegelhalter	345
14.8.2	Reply	347
	References	348

Chapter 15 Influence Diagrams and Medical Diagnosis **351**

C. A. de B. Pereira

15.1	The problem	351
15.2	Diagnostic model	352
15.3	The 'Ideal' solution	354
15.4	Discussion	356
15.4.1	Discussion by David Heckerman	356
15.4.2	Reply	358
	References	358

PART V EFFICIENCY AND COMPUTATIONAL ISSUES

Chapter 16	Fast Algorithms for Probabilistic Reasoning in Influence Diagrams, with Applications in Genetics and Expert Systems	361
	<i>D. J. Spiegelhalter</i>	
16.1	Introduction	361
16.2	Issues in genetics	362
16.3	An example of inbreeding	364
16.4	A solution using clique-trees	369
16.5	Comparison with the peeling approach	379
16.6	Coping with inexact probabilities	380
16.7	Criticism of structure	381
16.8	Conclusions	382
16.9	Discussion	383
	16.9.1 Discussion by Ilan Adler	383
	References	383
Chapter 17	Towards Efficient Probabilistic Diagnosis in Multiply Connected Belief Networks	385
	<i>M. Henrion</i>	
17.1	Introduction	385
17.2	Inference algorithms for belief nets	387
17.3	A probabilistic interpretation of QMR	390
17.4	BN2: two-level belief nets	391
17.5	BN2E: ‘idiot’s Bayes’	392
17.6	BN2O: the two-level belief network with noisy OR	393
17.7	Computing relative probabilities	395
17.8	Finding the most probable hypotheses	396
17.9	To find the k most probable hypotheses	399
17.10	Bounding the absolute probabilities	399
17.11	Conclusions	402
17.12	Discussion	403
	17.12.1 Discussion by Jim Smith	403
	17.12.2 Reply	406
	References	407
Chapter 18	Optimization in Constraint Networks	411
	<i>R. Dechter, A. Dechter and J. Pearl</i>	
18.1	Introduction	411

18.2	Structure of constraint networks	413
18.3	Finding a maximum utility solution for join-trees	415
18.4	Extension to a general objective function within acyclic CSPs	418
18.5	The general case	419
18.6	Conclusions	422
18.7	Discussion	423
	18.7.1 Discussion by Ilan Adler	423
	18.7.2 Reply	423
	References	424
Chapter 19	Towards Better Assessment and Sensitivity Procedures	427
	<i>R. J. Korsan</i>	
19.1	Introduction	427
19.2	A simple example	428
19.3	A different assessment procedure	432
	19.3.1 The region of support for the density	434
19.4	Computing the expected value	436
19.5	A comparison of the different methods	441
19.6	Needed research	442
19.7	Discussion	442
	19.7.1 Discussion by Allen C. Miller	442
	19.7.2 Reply	443
	References	443
	Appendix I	444
	Appendix II	448
	Appendix III	452
	Appendix IV	455
Chapter 20	Summary Observations	457
	<i>R. A. Howard</i>	
	References	458
Glossary		459
Index		461
