<b>Preface</b>	<b>v</b>
<b>Part I. Introduction and overview</b>	<b>1</b>
<b>1. Competence and choice at work</b>	<b>3</b>
<b>2. On business and work: An overview</b>	<b>13</b>
Business in transition	13
New management practices	15
Business in centrally planned economies	16
Labour market trends	16
Technological change in the workplace	18
Trends and issues in restructuring work organization	20
Lessons from Japan	22
Central and Eastern Europe	22
The flexibility potential of high technology	23
Stress and strain problems	24
New needs for training and learning on the job	25
Private services	25
Non-commercial services	26
Trade union policies	26
New technologies and future challenges	27
Policies for the 1990s	28
Work design	29
Challenges to the future	29
Bottlenecks and contradictions	30
Services	30
The design process	31
A new agenda for the design of advanced socio-technical systems	32
Responses and initiatives for change: Policies and programmes	32
Aims and processes	33
The role of the State	34
<b>Part II. The context of change</b>	<b>37</b>
<b>3. Business in transition</b>	<b>39</b>
3.1 Why business is going through a process of transition	39
Some underlying concepts	39
The globalization of the business community	41
The growth of competence-based business systems	44
Uneven regional distribution in the growth of new business systems	45
Shorter life cycles, faster turnover	48

New technology creates new business opportunities	49
The need to renew business policies and management strategies	50
3.2 Business in transition in Central and Eastern Europe	51
Problems and perspectives	51
Business policies and management strategies	54
<b>4. Labour market trends</b>	<b>61</b>
Trends in internal and external labour markets	62
The shift in the structure of employment	63
The emergence of higher levels of unemployment	66
The changing gender mix of labour markets	70
Changes in the temporal nature of work	72
Impact on working time	76
Factors promoting change in labour markets	78
Demographic change	78
Technological change	80
The growth of small and medium-sized enterprises	81
Conclusions: Some policy implications	82
<b>5. Technological change in the workplace</b>	<b>85</b>
The evolution of technology	85
The main effects on the organization of work	89
Aspects of the organization of work	89
Future trends	94
Knowledge as the focus of job design	96
Conclusions: The changing conceptions of technology	101
Annex: Forms of automation	104
<b>Part III. Policies</b>	<b>109</b>
<b>6. Initiatives for change and government programmes</b>	<b>111</b>
Organizational development as a problem	112
Patterns of innovation	114
Organizational change and the utilization of knowledge	114
Some patterns of development	117
Development and policy	120
The role of the State: Some points of departure	121
The traditional approach to health and safety	121
Some general perspectives	125
The issue of level	127
Objectives	128
The development and transfer of knowledge	129
The in-depth dimensions of development	131
The new enterprise	133
<b>7. Business policies and management strategies</b>	<b>137</b>
Good management is diverse	137
From business administration to global business development	138
New management strategies for industrial production	143
“Lean management” – A new concept from a study of the global motor industry	145
New leadership strategies	146
Business leadership and ethics	150

Women: The reserve of hidden talent	151
Why it is vitally important to make better use of women managers	152
The development of women in management	153
The learning enterprise: New attitudes towards the renewal of competence	154
Developing, newly industrializing and mature industrialized economies: Differences and similarities	156
<b>8. Trade union policy</b>	<b>159</b>
8.1 Trade union policy in mature economies	159
General factors influencing union attitudes	159
Working-time policies	165
Technological change and the need for "flexibility"	168
New management techniques	171
Teams, groups and cells: Autonomy or neo-Taylorism?	174
Case studies from the American and British motor industries	175
Future challenges	178
8.2 Central and Eastern Europe: A special case?	181
The industrial relations heritage	182
Collective bargaining	184
Workers' participation	185
Workers' organizations	187
Similarities and convergence in work organization	189
The future: For better or for worse?	190
<b>Part IV. Practice</b>	<b>193</b>
<b>9. Experiences in restructuring work organization</b>	<b>195</b>
Changes in work organization: A historical perspective	196
Traditional forms of work organization	196
Structural trends and strategies	198
Tendencies towards erosion	200
Competing perspectives in the changing organization of work: Diverging paradigms	201
Competing organizational models	202
On the changing importance of work	203
Some fundamental problems relating to the organization of work	204
Manufacturing: The dynamics of integration and flexibility, collectivism and segmentation	205
Basic trends in the organization of work	206
Work organization in the high-tech environment	213
CIM	214
The quality of work in CIM systems	224
New forms of work organization: Problems, dilemmas, contradictions	229
Services: Commercial and non-commercial activities	237
Commercial services: The modernization drive	238
Non-commercial services: In search of a viable model	243
Between work and welfare: Beyond the standard labour relationship	249
<b>Part V. Work design</b>	<b>255</b>
<b>10. Developments in work design</b>	<b>257</b>
Challenges to the old order	257
Design and discourse: The emerging new order?	258

The new orthodoxy: The challenge to design pluralism?	260
Trends in the emergent reference system	260
Customer-oriented production and services	261
Mobilization of knowledge and commitment: The "generative mechanism"	262
Networks and cooperation	262
The innovation of organization and the organization of innovation	263
The past in the future: Bottlenecks, vicious circles and contradictions	263
The persistence of traditional hierarchies	264
Illusionary decentralization	264
Unrealistic expectations concerning the potential of technology	264
The socio-ecological vicious circle	265
Subservient participation	265
Flexible rigidity or rigid flexibility?	265
The external costs of flexible integration	266
Innovative regulation: Generative mechanisms and virtuous circles	266
Organizational innovations as prerequisites for technological development	266
Human resources and factory planning	267
Skilled group work	267
The right to modern work materials	268
The combination of management principles	269
Quality of work relations and quality of services	270
Towards an innovative alliance for organizational design	270
<b>11. Intervening in the future of work and design</b>	<b>273</b>
Design and automation	274
Changing conceptions of design	276
Design and socio-technical change	278
A new agenda for the design of advanced socio-technical systems	281

## **Figures**

4.1	Sectoral employment trends in the European Community, 1960-87	63
5.1	Fields of application of various forms of production automation	86
5.2	The changing structure of manpower and tasks in motor vehicle assembly	91
5.3	Impact of information technology on four main organizational forms	93
5.4	Manufacturing philosophy: Traditional and for flexible systems	98
5.5	Different structures of technical organization	98
9.1	Horizontal and vertical integration of the inner-firm information system	214
9.2	Assembly design and work organization in the Swedish car industry	232
10.1	Productivity versus quality in the assembly plant	261

## **Tables**

3.1	Standardized unemployment rates in selected OECD countries, 1984-89	43
4.1	Sectoral distribution of employment, United States and Japan, 1970-86	64

4.2	Distribution of employment, Central and Eastern Europe, 1960-89	65
4.3	GDP growth and changes in the unemployment rate, selected OECD countries, 1973-88	67
4.4	Incidence of long-term unemployment from survey-based data, selected OECD countries, 1983-89	68
4.5	Labour force participation rates by sex, OECD countries, 1973-90	69
4.6	Labour force participation rates by sex, selected Central and Eastern European countries, 1950s/1960s-1980s	71
4.7	Ratio of female to male hourly earnings for manual workers in manufacturing, selected OECD countries, 1970-88	72
4.8	Size and composition of part-time employment, selected OECD countries, 1979-90	74
4.9	Average yearly hours actually worked per person, selected OECD countries, 1970-88	77
5.1	Robot applications, selected OECD countries, 1987	87
8.1	Changes in trade union membership in selected OECD countries, 1970-89	162
8.2	Annual working hours, Ford of Europe, 1991	164
8.3	Hours worked in the motor industry, selected countries, 1987	167
9.1	Taylorism-Fordism and alternatives	212
9.2	Developmental scenarios of operational deployment strategies for computer-assisted and -integrated PPS systems	220
9.3	Basic framework for the deployment of expert systems	222
9.4	Strategies and patterns in CIM	231
10.1	Toyotism and its social environment	260
