*Preface xi*

*List of contributors xii*

## **1. Introduction to mixing problems 1**

*A. W. Nienow, N. Harnby and M. F. Edwards*

- 1.1 Range of problems 2
    - 1.1.1 Problem identification and philosophy 2
    - 1.1.2 Single phase liquid mixing 2
    - 1.1.3 Liquid-liquid (immiscible) mixing 3
    - 1.1.4 Solid-liquid mixing 3
    - 1.1.5 Gas-liquid mixing 4
    - 1.1.6 Three-phase contacting 4
    - 1.1.7 Solids mixing 4
    - 1.1.8 Heat transfer 5
    - 1.1.9 Overmixing 5
  - 1.2 Mixing mechanisms 5
    - 1.2.1 Liquid mixing 5
    - 1.2.2 Solids mixing 10
  - 1.3 Assessment of mixture quality 16
  - 1.4 Rheology 18
- Notation 22  
References 23

## **2. Characterization of powder mixtures 25**

*N. Harnby*

- 2.1 A qualitative approach 25
  - 2.2 A quantitative approach 26
    - 2.2.1 Powder sampling 27
    - 2.2.2 Limiting variance values 28
    - 2.2.3 Statistical inference 30
  - 2.3 A typical mixture analysis 33
  - 2.4 Non-ideal mixtures 40
- References 41

### **3. The selection of powder mixers 42**

*N. Harnby*

- 3.1 The range of mixers available 42
  - 3.1.1 Tumbler mixers 42
  - 3.1.2 Convective mixers 42
  - 3.1.3 High shear mixers 47
  - 3.1.4 Fluidized mixers 48
  - 3.1.5 Hopper mixers 51
  - 3.1.6 Multi-purpose mixers 52
- 3.2 Selection based on process requirements 52
- 3.3 Selection based on mixture quality 54
- 3.4 Selection based on mixing costs 59
- 3.5 Selection decision chart 61
- References 61

### **4. Mixing in fluidized beds 62**

*D. Geldart*

- 4.1 Introduction 62
- 4.2 Fundamentals of fluidization 63
  - 4.2.1 Minimum fluidization 63
  - 4.2.2 Types of fluidization 64
  - 4.2.3 The role of bubbles 67
- 4.3 Types of mixing problems 68
- 4.4 Mixing in non-segregating systems 69
  - 4.4.1 Background theory 69
  - 4.4.2 Turnover times 71
  - 4.4.3 Residence time distributions 71
- 4.5 Mixing in segregating systems 73
  - 4.5.1 Mixing criteria 73
  - 4.5.2 Powders containing particles of equal density but variable size 74
  - 4.5.3 Powders containing species of differing densities and sizes 75
- 4.6 Concluding remarks 76
- Notation 77
- References 78

### **5. The mixing of cohesive powders 79**

*N. Harnby*

- 5.1 Introduction 79
- 5.2 Interparticulate forces 82
  - 5.2.1 Bonding due to moisture 82
  - 5.2.2 Electrostatic bonding 88
  - 5.2.3 Van der Waals' force bonding 89
  - 5.2.4 Interaction of the bonding forces 91
- 5.3 Selection of mixer 94

5.4 Mixture quality for cohesive systems 95  
References 98

**6. The dispersion of fine particles in liquid media 99**

*G. D. Parfitt and H. A. Barnes*

6.1 Introduction 99

6.2 Stages in the dispersion process 100

6.2.1 Incorporation 100

6.2.2 Wetting 102

6.2.3 Breakdown of agglomerates and aggregates 106

6.2.4 Stability to flocculation or colloidal stability 107

6.3 Other considerations 115

References 116

**7. A review of liquid mixing equipment 118**

*M. F. Edwards and M. R. Baker*

7.1 Introduction 118

7.2 Mechanically-agitated vessels 119

7.2.1 Vessels 119

7.2.2 Baffles 120

7.2.3 Impellers 120

7.3 Jet mixers 125

7.4 In-line static mixers 126

7.5 In-line dynamic mixers 127

7.6 Mills 128

7.7 High-speed dispersing units 128

7.8 Valve homogenizers 130

7.9 Ultrasonic homogenizers 130

7.10 Extruders 132

7.11 Equipment selection 136

References 136

**8. Mixing of liquids in stirred tanks 137**

*M. F. Edwards, M. R. Baker and J. C. Godfrey*

8.1 Introduction 137

8.2 Power input 137

8.2.1 Newtonian liquids 137

8.2.2 Non-Newtonian liquids 140

8.3 Flow patterns 145

8.4 Flow rate-head concepts 147

8.5 Turbulence measurements 148

8.6 Mixing time 149

8.6.1 Newtonian liquids 151

8.6.2 Non-Newtonian liquids 154

8.7 Mixing efficiency 155

Notation 156

References 157

## **9. Jet mixing 159**

*B. K. Revill*

- 9.1 Introduction 159
- 9.2 Fluid dynamics of turbulent jets 161
- 9.3 Jet mixing in tanks 163
  - 9.3.1 Measurement of mixing time 163
  - 9.3.2 Fluid dynamics of jet mixed tanks 164
  - 9.3.3 Theoretical prediction of batch mixing time 165
  - 9.3.4 Experimental correlations for jet mixing time 166
  - 9.3.5 Recommended jet/tank geometry 170
  - 9.3.6 Stratification 172
  - 9.3.7 Liquid level variation 174
  - 9.3.8 Continuous mixing 174
  - 9.3.9 Design procedure 174
  - 9.3.10 When to use jet mixed tanks 175
- 9.4 Jet mixing in tubes 177
  - 9.4.1 Design basis 177
  - 9.4.2 Coaxial jet mixer design 178
  - 9.4.3 Side entry jet mixer design 180
  - 9.4.4 Use of tubular jet mixers 180

Notation 181

References 182

## **10. Mixing in single-phase chemical reactors 184**

*J. R. Bourne*

- 10.1 Introduction 184
- 10.2 Mechanisms of mixing 184
  - 10.2.1 Convective, distributive mixing of a single-feed stream 185
  - 10.2.2 Diffusive mixing 188
  - 10.2.3 Approximate method 189
  - 10.2.4 More accurate methods 190

Notation 196

References 198

## **11. Laminar flow and distributive mixing 200**

*M. F. Edwards*

- 11.1 Introduction 200
- 11.2 Laminar shear 202
- 11.3 Elongational (or extensional) laminar flow 210
- 11.4 Distributive mixing 214
- 11.5 Dispersive mixing in laminar flows 216
- 11.6 Applications to blending and dispersing equipment 217
- 11.7 Assessment of mixture quality 222

Notation 223

References 224

13.7	Seals, gearboxes and impellers	272
13.7.1	Seals	272
13.7.2	Gearboxes	275
13.7.3	Impellers	278
13.8	Economic considerations	279
13.8.1	Introduction	279
13.8.2	Remedial losses	279
13.8.3	Marketing losses	280
13.8.4	Examples	280
13.9	Overall conclusions	283
	Notation	283
	References	285
	Appendix 13.1 Worked examples	286

## **14. Dynamics of emulsification 294**

*D. C. Peters*

14.1	Introduction	294
14.2	Rheology and stability	295
14.3	Droplet formation	300
14.3.1	Deformation and breakup in steady flows	301
14.3.2	Dynamic effects	306
14.3.3	Turbulence	306
14.4	Implications for process design	309
14.4.1	Batch processing	309
14.4.2	Continuous processing	311

Notation 311

References 313

Appendix 14.1: Numerical example of process design 315

Appendix 14.2: A procedure for scaling up or down non-Newtonian processes 318

## **15. Gas-liquid dispersion and mixing 322**

*J. C. Middleton*

15.1	Introduction – classification of gas-liquid mixing problems	322
15.2	Types and configurations of turbulent gas-liquid stirred vessels	326
15.3	A design basis for gas-liquid agitated vessels	330
15.4	Power consumption	331
15.5	Bubble size and coalescence	341
15.6	Gas hold-up fraction	342
15.7	Concentration driving force	343
15.7.1	Liquid mixing	343
15.7.2	Gas mixing	343
15.8	Gas-liquid mass transfer	346
15.9	Heat transfer	349

- 15.10 Gas-liquid mixers as reactors 349
  - 15.10.1 Theory of mass transfer with reaction 350
  - 15.10.2 Locale of diffusion limitation 351
  - 15.10.3 Mixing mode and reaction 352
  - 15.10.4 Scale of mixing 353
  - 15.10.5 Experimental work for classification of reaction regimes 354
  - 15.10.6 Gas-liquid reactor modelling 355
- 15.11 Example of scale-up 357
- Notation 360
- References 361

## 16. The suspension of solid particles 364

*A. W. Nienow*

- 16.1 Introduction 364
- 16.2 Definitions of states of suspension and distribution 364
  - 16.2.1 Just complete suspension 364
  - 16.2.2 Homogeneous suspension 365
  - 16.2.3 Bottom or corner fillets 365
  - 16.2.4 Dispersion of floating solids 365
- 16.3 Power consumption in systems with suspended particles 365
- 16.4 Mechanisms and models of particle suspension and distribution 366
  - 16.4.1 Particle suspension 366
  - 16.4.2 Solids distribution 368
- 16.5 Experimental measurement of particle suspension and distribution 369
  - 16.5.1 Particle distribution 369
  - 16.5.2 Just complete suspension speed,  $N_{JS}$  369
- 16.6 Experimental results and correlations for  $N_{JS}$  370
  - 16.6.1 Introduction 370
  - 16.6.2 Correlations for  $N_{JS}$  372
  - 16.6.3 Particle and fluid properties 373
  - 16.6.4 Solid concentration 373
  - 16.6.5 Standard geometry 374
  - 16.6.6 Other geometries 379
  - 16.6.7 Scale-up 380
- 16.7 Selection of geometry and the scale-up rule for  $(\bar{\epsilon}_T)_{JS}$  381
- 16.8 Solids distribution and withdrawal 382
  - 16.8.1 Assessment of solids distribution and scale-up 382
  - 16.8.2 Solid withdrawal 384
- 16.9 Three phase systems 386
- 16.10 The ingestion and dispersion of floating solids 388
- 16.11 Conclusions 390
- Notation 390
- References 392

## 12. Static mixers 225

*J. C. Godfrey*

- 12.1 Introduction 225
    - 12.1.1 Mixer types 226
  - 12.2 Laminar mixing 227
    - 12.2.1 Mixing indices 232
    - 12.2.2 Mixing rate 234
    - 12.2.3 Energy and efficiency 238
  - 12.3 Turbulent mixing 242
    - 12.3.1 Mixing rate 243
    - 12.3.2 Energy requirements 245
    - 12.3.3 Applications 245
  - 12.4 Conclusions 246
- Notation 247  
References 248

## 13. Mechanical aspects of mixing 250

*R. King*

- 13.1 Introduction 250
- 13.2 The production of 'steady' forces on an agitator and transmission of power 251
  - 13.2.1 'Steady' forces on an agitator 251
  - 13.2.2 Transmission of power by an agitator shaft 254
- 13.3 The EEUA method of shaft sizing 254
  - 13.3.1 Introduction 254
  - 13.3.2 Combined torsion and bending 256
  - 13.3.3 Stress analysis 258
- 13.4 Fluctuating forces and vibrations 259
  - 13.4.1 Resonance 259
  - 13.4.2 Vibrations 259
  - 13.4.3 Response to forcing 261
  - 13.4.4 Fluctuating loads on an agitator shaft 262
  - 13.4.5 Whirling of the agitator shaft 264
- 13.5 Shaft design to accommodate fluctuating loads – the FMP approach 265
  - 13.5.1 Introduction 265
  - 13.5.2 Sizing the shaft 266
  - 13.5.3 Stress analysis 267
- 13.6 Fatigue analysis 268
  - 13.6.1 Introduction 268
  - 13.6.2 Bending only 268
  - 13.6.3 Combined bending and torsion 269
  - 13.6.4 Checking the safety of the design for fatigue 271
  - 13.6.5 The importance of a fatigue check 272

**17. The mixer as a reactor: liquid/solid systems 394**

*A. W. Nienow*

17.1 Reactor types 394

17.2 Reaction rates 395

17.3 Mass transfer 398

17.3.1 Measurement of mass transfer coefficient,  $k$  398

17.3.2 The relationship between  $k$  and impeller speed  $N$  399

17.3.3  $k_{JS}$  at  $N_{JS}$  and as a function of  $(\epsilon_T)_{JS}$  400

17.3.4 Prediction of the bulk diffusion mass transfer coefficient,  $k$  402

17.3.5 The dissolution time when  $Sh = 2$  406

17.4 The use of the slip velocity equation 406

17.5 Particle impacts and abrasion 407

17.6 Conclusions 409

Notation 409

References 410
