<b>Preface</b>	<i>ix</i>
<b>1. Approaching economic evolution</b>	<b>1</b>
1.1. <i>The contours of an evolutionary research programme around 1950</i>	1
1.1.1. The empirical orientation as Schumpeter's final thesis	2
1.1.2. The algorithmic approach and Goodwin's prologue	5
1.1.3. The population perspective as introduced by Alchian	9
1.2. <i>Surveying evolutionary economics</i>	13
1.2.1. Crude definitions	13
1.2.2. On the modern history of evolutionary economics	16
<i>Notes</i>	21
<b>2. Schemes of punctuated evolution and jerky innovation</b>	<b>26</b>
2.1. <i>From railroadization to analytical schemes</i>	26
2.2. <i>Measuring the application of routines</i>	31
2.3. <i>The scheme of punctuated evolution</i>	36
2.4. <i>Punctuated evolution and Schumpeter's 1910-theses</i>	40
2.5. <i>Economic paradigms and evolution</i>	44
2.6. <i>Two principles of interface design</i>	49
2.6.1. The principle of commodity abstraction	49
2.6.2. The principle of interactive learning in product innovation	52
2.7. <i>Conclusions on paradigms</i>	55
<i>Notes</i>	59
<b>3. Density-dependent diffusion and innovation</b>	<b>63</b>
3.1. <i>The network of interrelations</i>	63

3.1.1. Integrating 'ecological' and evolutionary analysis	63
3.1.2. The unfinished growth pole analysis as an example	65
<b>3.2. Logistic diffusion in post-Schumpeterian terms</b>	<b>67</b>
3.2.1. Introduction	67
3.2.2. The logistic difference equation and diffusion of innovations	69
3.2.3. Short and long innovation-based business cycles	72
3.2.4. Some limitations of the simple logistic-curve approach	76
<b>3.3. Lotka-Volterra inspired models of interdependent diffusion?</b>	<b>78</b>
3.3.1. Fables of density-dependent evolution	78
3.3.2. The interdependence of applications of different innovations	81
3.3.3. Evolutionary interaction and niches	84
<b>3.4. The logistic curve and economic decision-making</b>	<b>87</b>
3.4.1. Firm-level analysis	87
3.4.2. Pioneering and crowding modes of behaviour	88
<b>Notes</b>	<b>91</b>
<b>4. Exploring the process of 'Schumpeterian competition'</b>	<b>95</b>
<b>4.1. The complex world</b>	<b>95</b>
4.1.1. Introduction	95
4.1.2. Problem complexity and Artificial Intelligence	96
<b>4.2. The pioneering work of Nelson and Winter</b>	<b>101</b>
4.2.1. An evolutionary synthesis	101
4.2.2. Typical Nelson-and-Winter simulation models	104
<b>4.3. A formal version of the computational structure of typical Nelson-and-Winter models</b>	<b>109</b>
4.3.1. Inheritance from period $t - 1$	110
4.3.2. Short-run behaviour	110
4.3.3. Productivity change through innovation and imitation	111
4.3.4. Change in physical capital	112
4.3.5. State of the system at the beginning of period $t + 1$	113
4.3.6. Implementing the formal specifications	114
<b>4.4. The extendibility of Nelson-and-Winter models</b>	<b>118</b>
4.4.1. Satisficing behaviour	118
4.4.2. Exit and entry	119
4.4.3. Industry creation	123
4.4.4. Product quality, product innovation and imitation	124
<b>4.5. Appreciating Nelson and Winter's modelling scheme</b>	<b>131</b>
<b>Notes</b>	<b>138</b>

<b>5. The evolution of strategies of transaction: an algorithmic story</b>	143
5.1. <i>Rule change in iterated computations</i>	143
5.1.1. Rule-based systems and genetic algorithms	143
5.1.2. Arthur's application of classifier systems	147
5.1.2. From production routines to rules of interaction	150
5.2. <i>From Axelrod to the Trader's Dilemma</i>	152
5.2.1. Axelrod's evolution of cooperation	152
5.2.2. A fable of the difficult evolution of cooperation	155
5.3. <i>Iterated games during a trading period with fixed rules</i>	159
5.3.1. The possibility of retrospection	159
5.3.2. Strategies for the iterated Trader's Dilemma	161
5.3.3. Complexity and bounded rationality	164
5.3.4. The conditional values of strategies	166
5.3.5. The overall value of a strategy for a month's trading	167
5.4. <i>The evolutionary change of strategies</i>	169
5.4.1. The changing frequency of the different strategies	170
5.4.2. The theoretical fitness of strategies	172
5.4.3. The modified genetic algorithm	174
5.4.4. The multi-patterned evolutionary dynamics	176
<i>Notes</i>	180
<b>6. Research horizons</b>	185
6.1. <i>Towards an evolutionary-economic synthesis</i>	185
6.2. <i>The diversity of evolutionary explanations</i>	190
6.2.1. The past multitude of biological explanations	190
6.2.2. The diversity of evolutionary-economic explanations	193
<i>Notes</i>	196
<b>Appendix: Algorithmic notation and the programming of Nelson-and-Winter models</b>	198
A.1. <i>Algorithmic modes of describing evolutionary models</i>	198
A.1.1. The notation of this book	198
A.1.2. The analytical cycle	199
A.1.3. The MAPLE notation	201
A.2. <i>Nelson-and-Winter models formulated as MAPLE programs</i>	205
A.2.1. Data structures	205
A.2.2. The recursive master procedure	209

A.2.3. State initialisation	209
A.2.4. The general computation of the state variables	210
A.2.5. The short-term market process	212
A.2.6. Finding the new technology of a firm	212
A.2.7. The firm's investment and depreciation process	214
A.2.8. Collection of statistical data	216
<b>A.3. Starting an object-oriented version of Nelson-and-Winter models</b>	<b>216</b>
<i>Notes</i>	219
