Series Editor's Introduction	ix
Preface	xiii
1. General Concepts	1
1.1 Variables and Objects	1
1.2 Types of Variables	2
1.3 Missing Data	3
1.4 Active Versus Passive Data	5
1.5 Many Options	6
1.6 Transformation and Optimal Quantification	6
1.7 Classical Versus Nonlinear Multivariate Analysis	7
2. Classical Methods of Multivariate Analysis	9
2.1 Introduction	9
2.2 Principal Components Analysis	9
2.3 Canonical Analysis	12
2.4 Generalized Canonical Analysis	14
2.5 Relations Among PCA, CA, and GCA	15
3. Principal Components Analysis	17
3.1 Introduction	17

3.2 Example With Two Categorical Variables	18
3.3 Graph	19
3.4 Regression Lines	20
3.5 Leading Coordinate Points	20
3.6 PCA solution	23
3.6.1 Introduction	23
3.6.2 PCA Solution in the Example	23
3.6.3 A Conclusion From the Example	28
3.6.4* Calculation of PCA for Two Variables	29
3.7 PCA Solution for Three Variables With Linear Dependence	30
3.7.1 Introduction	30
3.7.2 PCA Solution	31
3.7.3 PCA Results for Objects	33
3.8 PCA Example With Three Linearly Independent Variables	35
3.8.1 Introduction	35
3.8.2 PCA Solution	37
3.8.3 PCA Object Scores	39
3.8.4 PCA Solution for LC Points	43
3.9* Calculation of the PCA Solution	44
4. Optimal Quantification	46
4.1 Introduction	46
4.2 Single Quantification: Two Variables	47
4.2.1 Classical PCA	47
4.2.2 Solution With Single Optimal Quantification	47
4.2.3 Optimal Quantification Without a Priori Quantification	50
4.2.4 Second PCA Solution for the Example	51
4.3 Single Quantification With Three Variables	51
4.3.1 Single Optimal Quantification With Three Nominal Variables	51
4.3.2 Optimal Single Quantification	52
4.3.3 Some Additional Comments	56
4.4 Other Options for Optimal Quantification	56
4.5 Multiple Quantification With Two Variables	57
4.6 Multiple Quantification With Three Variables	61
4.6.1 Introduction	61
4.6.2 Multiple Solution	62
4.6.3 Correlations and Variances	66

4.7*	Calculation of Optimal Quantification	69
4.7.1*	<i>General Principle</i>	69
4.7.2*	<i>Example</i>	69
4.7.3*	<i>Multiple Quantification</i>	69
5.	Indicator Matrices	71
5.1	Complete Indicator Matrix	71
5.2	Incomplete Indicator Matrix: Missing Data Passive	73
5.3	Indicator Matrix With Missing Data Active	73
5.4	Burt Table and Indicator Matrix	75
5.5*	Some Algebraic Derivations	76
5.5.1*	<i>Introduction</i>	76
5.5.2*	<i>Complete Indicator Matrix</i>	76
5.5.3*	<i>Incomplete Indicator Matrix</i>	78
6.	Properties and Risks of Optimal Quantification	79
6.1	Introduction	79
6.2	Marginal Frequencies	79
6.3	Number of Categories of a Variable	80
6.4	Effect of Special Category Combinations	81
6.5	Linear Regression and Reciprocal Averaging	83
6.6	Missing Data Treated as Passive	84
6.7	How Many Dimensions for Optimal Quantification?	87
6.7.1	<i>Complete Indicator Matrix</i>	87
6.7.2	<i>Incomplete Indicator Matrix</i>	90
6.7.3	<i>Missing Data Active</i>	92
7.	Conclusions	93
7.1	Recapitulation	93
7.2	Preview	94
	References and Recommended Reading	95
	Name Index	96
	Subject Index	97
	About the Author	99
