# Figures

1.1	The stages of demographic transition	27
2.1	Average population growth rates, 1975–1980	31
2.2	Gross reproduction rates, 1975–1980	39
2.3	Expectation of life at birth, 1975–1980	42
3.1	Infant mortality, Europe, since 1850	62
3.2	Infant mortality, Latin America, since 1925	66
3.3	Infant mortality, Asia, 1950 and 1975	68
3.4	Infant mortality rates	69
3.5	Health transition and rate of mortality decline in developed countries	77
3.6	Infant mortality and GNP per capita, 1978	82
4.1	Crude birth-rates for countries with advanced transition, 1975–1980	97
4.2	Fertility in Europe since 1850	104
4.3	Fertility in Latin America since 1925	108
4.4	Fertility in Asia, 1950 and 1975	110
4.5	Total fertility, northern Europe, 1850–1980	123
4.6	Total fertility, western Europe, 1850–1980	124
4.7	Total fertility, southern Europe, 1920–1980	126
4.8	Total fertility, eastern Europe, 1920–1980	127
4.9	Total fertility, overseas English-speaking countries, 1900–1980	128
4.10	Total fertility, USSR and Japan, 1920–1980	129
4.11	Changes in total fertility, developed countries, by major demographic regions, 1956–1980	130
4.12	Period of fertility transition in developed countries	133
4.13	Crude and net reproduction rates, Sweden, 1830–1980	134
5.1	Period in which crude death-rates fell below 20 per 1000	145
5.2	Period in which crude birth-rates fell below 20 per 1000	146
5.3	A model of demographic interactions	149
6.1	Rate of transoceanic migration in Europe, by main regions, 1850–1940	168
6.2	Natural increase and emigration, Europe, 1820–1915	171
6.3	Net migration and natural increase, Sweden, 1851–1980	180
6.4	Net migration and natural increase, Italy, 1869–1980	181
7.1	Net reproduction rate and age structure. Type 1	202
7.2	Net reproduction rate and age structure. Type 2	204
7.3	Net reproduction rate and age structure. Type 3	206
7.4	Net reproduction rate and age structure. Type 4	208
7.5	Net reproduction rate and age structure. Type 5	209
8.1	Natural increase of the French population since 1740	225
8.2	Natural increase in northern Europe, 1720–1980	226
8.3	Natural increase in western and central Europe, 1785–1980	232
8.4	Natural increase in southern and eastern Europe, and Japan, 1858–1980	241

## viii List of Figures

8.5	Natural increase in Ireland, 1864–1980	253
8.6	Natural increase in countries of immigration, 1820–1980	255
8.7	Natural increase in less developed countries with moderate growth levels, 1871–1980	264
8.8	Natural increase in less developed countries with high growth levels, 1820–1980	266
8.9	Natural increase in less developed countries with very high growth levels, 1844–1980	270
8.10	The types of demographic transition	281
9.1	Age-structural development during demographic transition, Europe	291
9.2	Age-structural development during demographic transition, USSR and USA	292
9.3	Age-structural development during demographic transition, less developed countries	293
9.4	Changing population size, school-age children	295
9.5	Changing size of elderly populations	296
9.6	Changing size of elderly populations in the course of demographic transition	298
9.7	Changing size of school-age populations in the course of demographic transition	299
10.1	Relative development of total population size during demographic transition, various countries	314
10.2	Retrospective development of population growth rates, 1700–1980, and projections for 1980–2100, the world and its continents	318
11.1	Fertility and real per capita income, France and England, 1750–1940	326
12.1	Fertility and real per capita income, Western countries, 1780–1938	355
13.1	Singulate mean age at marriage since the turn of the century, females, Asia	372
13.2	Three nuptiality regimes: singulate mean age at marriage and marital frequency, females, before the transition of marital fertility	374
13.3	Development of real GNP per capita in dollars, less developed countries	384
13.4	Development of the proportion of women able to read and write, by generation, in the main less developed countries with advanced transition	387
17.1	Population and total real product, Nordic model of transition	457
17.2	Population and total real product in countries with flat or U-shaped transition profiles, France and Ireland	460
17.3	Population and total real product, Western transition model	463
17.4	Population and total real product, overseas immigration countries	464
17.5	Population and total real product, Southern transition model	467
17.6	Population and total real product, Japan	469

# Tables

1.1	Regional coverage	21
1.2	Population of countries with advanced transition, mid-1983	22
2.1	Average population growth rates	30
2.2	Estimated rates of population growth. Crude birth- and death-rates by continent and country, 1975–1980. Net migration rates	32
2.3	Estimated gross reproduction rate per woman, by continent, 1975–1980	35
2.4	Estimated life expectation at birth, male and female, by continent, 1975–1980	36
2.5	Expectation of life at birth	43
3.1	Mortality statistics derived from complete registration, percentage of population covered, by major world regions, 1958	50
3.2	Available mortality data, Latin America	52
3.3	Crude death-rates, Europe, 1800–1890	55
3.4	Annual average population growth rate by broad period and broad category of country	56
3.5	Development of infant mortality rates, Europe, since 1850	58
3.6	Development of infant mortality rates, America, since 1900	60
3.7	Development of infant mortality rates, Asia, since 1900	61
3.8	Infant mortality rates, Europe, 1861–1870	73
3.9	Infant mortality rate, less developed countries, 1921–1930	74
3.10	Crude death-rates, selected developed countries, 1861–1870	75
3.11	Infant mortality, data and duration of declines	79
4.1	Percentage of population covered by ‘complete’ registration statistics for births, <i>circa</i> 1960, by continent	92
4.2	Estimated birth-rates, selected Asian countries, in given periods	107
4.3	Crude birth-rates, Europe, 1845–1980	118
4.4	Crude birth-rates, North and South America, 1895–1980	119
4.5	Crude birth-rates, Asia, 1921–1980	120
4.6	Gross and net reproduction rates for women born between 1826 and 1950, France	121
4.7	Gross and net reproduction rates, England, France, Germany, Italy, and Sweden, 1826–1980	122
4.8	Changes in total fertility, developed countries, by region, 1956–1983	131
4.9	Onset of fertility decline, developed and less developed countries	132
5.1	Cases of plague, Europe, 1550–1850	141
5.2	Time differentials at which comparable life expectation at birth was reached in four developed countries	144
5.3	Infant mortality levels immediately preceding fertility transition, with average numbers of children per woman	148
6.1	North-west European emigration to the United States, 1842–1858	158
6.2	Overseas migration, 1821–1932	164

## x List of Tables

6.3	Emigration from Europe by decade, 1851–1960	166
6.4	Rates of emigration from Europe by decade, 1851–1940	167
6.5	Number of births and emigration	169
6.6	Emigration rates by age, Sweden, 1891–1900	170
6.7	Natural increase and emigration, all of Europe, 1821–1915	172
6.8	Natural increase and emigration, north-western Europe excluding France, 1801–1915	173
6.9	Natural increase and emigration, southern Europe (Italy, Spain, and Portugal), 1851–1915	174
6.10	Natural increase and emigration of east European populations, 1841–1915	175
6.11	Number of immigrants by national origin, United States, 1820–1979	176
6.12	Estimated net migration and its place in population growth, European regions, 1950–1980	178
6.13	Net migration as a proportion of total population growth, United States, 1801–1980	182
6.14	Net migration as a proportion of total population growth, France, 1801–1982	184
7.1	Cohort fertility, selected countries in Europe and North America, 1913–1935	197
7.2	Net reproduction rate, 1930–1986	214
8.1	Development of crude birth-rate in less developed countries with advanced transition, 1950–1980	261
8.2	Development of crude death-rate in less developed countries with advanced transition, 1950–1980	262
8.3	The types of demographic transition	282
9.1	Age-structural development according to transition type	289
9.2	Changing population size, children 5 to 14 years old	296
9.3	The changing size of elderly populations (aged over 65)	297
10.1	Natural increase during demographic transition, with corresponding transitional multipliers, Sweden, Germany, Italy, USSR, France	305
10.2	Estimate of the number of people speaking different European languages, 1800–1935	310
10.3	Natural increase during demographic transition, with corresponding transitional multipliers, India, China, Sri Lanka, Egypt, Mexico, Taiwan	312
10.4	Population at the end of the transition	313
10.5	Transitional multipliers of population according to the value of parameters $H$ , $D$ , and $r_u$	314
10.6	Influence of the forms of demographic transition on the value of multiplier $M$	316
10.7	The changing distribution of the world's population, on certain assumptions	319
11.1	Total fertility rate, France and England, 1750–1940	323
11.2	Estimates of real product per inhabitant, France and Great Britain, 1750–1938	325
11.3	The spread of enclosures	331
12.1	Infant mortality rates, Belgium, 1834–1910	348

12.2	Adjusted infant mortality rate, Belgium, 1827–1847	348
12.3	Belgian juvenile and infant mortality, by province, 1841–1845	349
12.4	Female infant mortality, Belgian provinces, 1841–1845 and 1878–1895	349
12.5	Annual average population increase, Belgium, 1834–1845	349
12.6	Infant mortality rate, Leipzig, 1751–1870	351
12.7	High rates of infant mortality in two German provinces: Upper Bavaria and Swabia, 1835–1935	352
12.8	Marital fertility ( $I_g$ ) in two German provinces experiencing high infant mortality: Upper Bavaria and Swabia, 1866–1935	353
13.1	Life expectation at birth by sex in less developed countries with advanced transition, 1975–1980	371
13.2	Singulate mean age at marriage and proportion of women married at 50 years, female generations born around 1840, Western countries	375
13.3	Development of female nuptiality at the beginning of the twentieth century, East European model	376
13.4	Development of female nuptiality, Non-European model, 1925–1982	377
13.5	Nominal and real GNP per capita in major developed and less developed countries, with a corresponding measure of exchange rate distortion	382
13.6	Real product per capita in less developed countries with advanced transition, 1970	384
13.7	Annual average rate of growth of GNP per capita, less developed countries with advanced transition, 1950–1970	385
13.8	Proportions illiterate and indices of progress between female generations, less developed countries, 1970	389
13.9	Fertility and socio-economic characteristics, by state: India, 1977–1981	391
14.1	Fertility by social class	406
15.1	Evolution of rates of investment in various countries	418
16.1	Demographic and economic growth in less developed countries, 1950–1952 to 1967–1969	433
16.2	Demographic and economic growth in less developed countries, 1960–1980	434
16.3	Population increase and growth of real per capita product in countries with advanced transition	435
16.4	Demographic and economic growth in less developed countries with advanced transition, 1960–1980	436
17.1	Distribution of world manufacturing, large industrial nations, 1870 and 1913	455
17.2	Development of the sectoral distribution of the working population since the mid-nineteenth century in the principal capitalist developed countries	470
17.3	Population increase and growth of per capita income over the long term, industrial countries	475
17.4	Growth of the working population employed in non-agricultural sectors, and growth of real per capita income, 1950–1980	477
17.5	Growth of the working population and product in large industrial	

## xii List of Tables

	nations since the mid-nineteenth century: agricultural and non-agricultural sectors, in successive long-term periods	478
18.1	Currently cultivated and potentially cultivable land, by continent	492
18.2	Population growth and capital formation	496
18.3	Sectoral distribution of labour in four less developed countries, 1872–1979	498
18.4	Population and GDP per capita, India, 1861–1980	501
18.5	Population and GDP per capita, Brazil, 1900–1980	504
18.6	Population and GDP per capita, Mexico, 1895–1980	505
18.7	Population and GDP per capita, Egypt, 1895–1980	506
