1 The case for exercise in the promotion of mental health and psychological well-being	1
KENNETH R. FOX, STEPHEN H. BOUTCHER, GUY E. FAULKNER AND STUART J.H. BIDDLE	
2 Physical activity, anxiety, and stress	10
ADRIAN H. TAYLOR	
3 The relationship between physical activity and clinically defined depression	46
NANETTE MUTRIE	
4 Emotion, mood and physical activity	63
STUART J.H. BIDDLE	
5 The effects of exercise on self-perceptions and self-esteem	88
KENNETH R. FOX	
6 Cognitive performance, fitness, and ageing	118
STEPHEN H. BOUTCHER	
7 Physical activity as a source of psychological dysfunction	130
ATTILA SZABO	

8	The way forward for physical activity and the promotion of psychological well-being	154
	STUART J.H. BIDDLE, KENNETH R. FOX, STEPHEN H. BOUTCHER AND GUY E. FAULKNER	
	<i>References</i>	169
	<i>Index</i>	197

Figures

3.1	Relative risk of developing depression at follow-up from different levels of baseline physical activity	50
3.2	Relative risk of developing depression at follow-up from different levels of physical activity at baseline	51
5.1	A hierarchical model of self-concept	91
5.2	Self-perception constructs measurable at different levels of specificity	92
5.3	The Exercise and Self-Esteem Model for intervention studies	94
5.4	Adaptation of the Exercise and Self-Esteem Model for use with the Physical Self-Perception Profile	95
6.1	Standard scores averaged across eight cognitive tests (Culture Fair IQ, Digit Span, Digit Symbol, Dots, RT, Stroop Interference and Stroop Total) for aerobically trained, strength trained, and control subjects	126
7.1	A psychosocial model for the development of eating disorder symptoms in athletes	151

Tables

2.1	Summary of key meta-analytic review papers	14
2.2	Longitudinal relationship between physical activity and anxiety	19
2.3	Effects of acute exercise on anxiety	28
2.4	Effects of chronic exercise on psychosocial stress reactivity	34
2.5	Effects of acute exercise on psychosocial stress reactivity	38
3.1	Changes in physical activity status and subsequent depression	50
3.2	Randomised controlled studies of exercise treatment for clinically defined depression	54
4.1	Common measures of health-related quality of life	65
4.2	Summary of mood and affect measures commonly used in physical activity research	68
4.3	Factors of psychological well-being for physical activity identified by Moses et al. (1989)	71
4.4	Summary of findings from meta-analytic and narrative reviews investigating the relationship between physical activity, mood and affect	72
4.5	Summary of findings from British population surveys investigating the relationship between physical activity and psychological well-being	76
4.6	Controlled experimental trials from Britain investigating physical activity, exercise and psychological well-being	78
5.1	Randomised control trials addressing the effect of exercise on self-esteem and physical self-perceptions	100
6.1	Examples of cognitive tests used in fitness, cognitive performance and ageing research	120
6.2	Intervention studies examining the effect of fitness on cognitive performance of older adults	124
7.1	Components or symptoms of exercise dependence	135
7.2	Summary table of research into exercise dependence	138

7.3	(a) Exercise dependence self-evaluation check list	143
	(b) Self-help strategies for the modification of exercise habits	143
7.4	Summary table of published papers on physical activity and eating disorders relationships	145
8.1	Psychological and physiological mechanisms that could underlie the relationship between physical activity and mental health	164
