## List of figures

- 3.1 The circle of family conflict and developmental crisis
- 4.1 A comparison of linear and circular causality
- 5.1 The construction of constitutive rules
- 5.2 The construction of regulative rules
- 6.1 Constitutive rules for the legitimization of suicidal behaviour in newspaper reporting
- 6.2 Paths to the legitimacy of suicidal behaviour
- 7.1 Self-mutilation in patients and the resolution of hierarchical conflict in a psychiatric hospital ward
- 7.2 Constitutive rules related to the legitimization of wrist-cutting
- 7.3 The mutual negative construing of ward staff and patients
- 7.4 Self-mutilation, regulative rules and the escalation of distress from a staff perspective on a psychiatric ward
- 8.1 The form for the collection of standardised data from the letters
- 8.2 The cycle of conflict reduction and escalation
- 8.3 The cycle of escalating difficulties and suicidal feelings
- 9.1 An assessment schedule for the systemic understanding of suicidal behaviour
- 9.2 Stages in the escalation of distress and the referral to practitioners
- 10.1 Constitutive rules relating to how bed-wetting is construed
- 10.2 Parental constitutive rules regarding Peter's defiance
- 10.3 Parental regulative rules regarding Peter's defiance
- 10.4a A cycle of interaction regarding Peter's bed-wetting
- 10.4b Parental regulative rules regarding Peter's bed-wetting
- 10.5a A family cycle of distress management
- 10.5b Regulative rules in a family cycle of distress management
- 10.6 A cycle of independence, withdrawal and involvement
- 10.7a A family cycle to maintain coherence
- 10.7b Regulative rules in a cycle to maintain coherence
- 10.8a A cycle of interaction between Mark and Pam
- 10.8b Regulative rules in a cycle of interaction between Mark and Pam
- 10.9a A cycle of coping interaction between Grandmother and Pam
- 10.9b Regulative rules in a cycle of coping interaction
- 10.10 Comparative regulative rules for construing what happens when Maria slams the door
- 10.11 Withdrawal and involvement; a cycle of interaction in the Graham family
- 11.1 A constitutive rule about the construing of sitting quietly.
- 11.2 A spiral of escalation
- 11.3 A cycle of interaction relating to symptoms and the status 'sick'
- 11.4 A relational cycle of depression and autonomy
- 11.5 A cycle of family interaction involving withdrawal
- 11.6 A relational cycle of withdrawal and autonomy
- 11.7 Constitutive rules regarding the construing of behaviour in three systemic contexts: threat of imminent dissolution, negative connotation and use of the sick role

## List of tables

- 6.1 Reported suicides and the occurrence of depression
- 6.2 Reported suicides facing criminal charges
- 6.3 Reported suicides and marital problems
- 6.4 Reported suicides with financial and employment problems
- 6.5 Reported suicides with miscellaneous causal descriptions
- 6.6 Reported attempted suicide
- 8.1 Distribution by age at attempt
- 8.2 The coding of individual problems
- 8.3 The presentation of symptoms and interactive problems
- 8.4 The presentation of symptoms and problems in individual or interactive contexts
- 9.1 Ages of the patients admitted to the hospital emergency ward after an episode of suicidal behaviour
- 9.2 Marital status of patients admitted to the hospital ward after an episode of suicidal behaviour
- 9.3 Categorisation of reported events
- 9.4 Problems as presented at interview
- 9.5 Problems as presented in the context of life events
- 9.6 Previous contacts to resolve the problem
- 9.7 The incidence of life events in the context of systemic hypotheses
- 9.8 The incidence of presented problems in the context of systemic hypotheses
- 9.9 Post-assessment referral for therapy or follow-up
- 9.10 Outcomes of therapy and assessment
- 10.1 The presentation of problems and the presence of suicidal behaviour in the families
- 10.2 The Brigham family constructs
- 10.3 The Green family constructs
- 11.1 Factors distinguishing the families where suicidal behaviour had occurred from these families where no suicidal behaviour had occurred
