

Contents

1 Introduction	1
Aims and objectives of the book	1
What is disease mapping?	1
The environment, disease and disease mapping: an historical overview	4
Disease mapping	6
Disease mapping: modern developments	9
<i>Disease atlases</i>	10
The value of mapping: summary	12
Summary	13
References	14
2 Visual Perception and Map Construction	16
How to construct a map	16
<i>The data</i>	16
<i>The area</i>	17
<i>The choice of scale</i>	17
Map transformations	18
Symbolic representation	19
<i>Symbols</i>	19
<i>Contours</i>	20
<i>Colour</i>	22
Further processing of data	24
Interpretation of maps	25
References	26
Summary	27
3 Data Types and Sources	28
Routinely published statistics: numerator data	28
<i>National statistics of mortality</i>	28

<i>National statistics of morbidity</i>	30
<i>Ad hoc publications</i>	31
Routinely published statistics: denominator data	32
<i>National population and vital statistics</i>	32
<i>Census data</i>	32
<i>Small area statistics</i>	32
Specialist databases	34
<i>Ad hoc data</i>	34
<i>R-cade</i>	35
Data quality	37
Linking data	37
Confidentiality	38
<i>The Data Protection Act</i>	38
Summary	39
References	39
4 Basic Methods	41
Standardization of rates	41
Expected rates	42
Control rates	42
The use of deprivation indices and other covariates	43
Standardized mortality/morbidity ratios	45
<i>Death certificates</i>	45
<i>Standard population</i>	46
<i>International classification of disease (ICD)</i>	47
<i>The tenth ICD revision</i>	48
Maps of variability	49
Edge effects	50
Unobserved effects	50
Summary	51
References	52
5 Study Design	53
Overview	53
Disease mapping	54
Ecological studies	54
Studies of disease clustering	55
Putative sources of hazard	55
<i>Identification of the study area</i>	56
<i>Prevailing wind direction</i>	56

<i>Umbrella effect</i>	58
<i>Topography</i>	58
<i>Time scale</i>	59
<i>Diseases to be monitored</i>	59
<i>Changes in disease notification</i>	60
<i>Type of study</i>	60
<i>Criteria for causation</i>	61
<i>Choice of control disease</i>	64
<i>Choice of control population</i>	64
A possible template	65
<i>Initial response: collecting information</i>	65
<i>Develop the hypothesis</i>	66
<i>Decide on the diseases to monitor</i>	66
<i>Define the population at risk</i>	66
<i>Describe the rates of disease</i>	66
<i>Mapping the disease distribution</i>	67
<i>Analytical stage</i>	67
Worked example	68
<i>The Arbroath Multiple Disease Study</i>	68
Initial response/background	68
Hypothesis	68
Selection of diseases to monitor	69
Identification of the population at risk	69
Rates of disease	69
Mapping the distribution of disease	70
Results	70
Summary	74
References	75
6 Advanced Methods	77
Smoothing of rates and density estimation	77
Ecological analysis	81
Putative sources of health hazard	83
Models for individual events	84
Estimation	87
Hypothesis tests	87
Models for count data	89
Estimation	90
Hypothesis tests	91
Disease clustering	91

Definition of clusters and clustering	92
Modelling issues	94
Hypothesis tests for clustering	95
Summary	98
References	98
7 Public Health Surveillance and Mapping	102
Proactive and reactive monitoring	102
<i>The role of disease mapping in Health Boards</i>	102
<i>Routine monitoring: advantages and disadvantages</i>	107
Mapping differences in rates	108
Mapping and interpreting ecological analyses	113
<i>Malaria and insulin dependent diabetes mellitus: an ecological study</i>	113
Mapping clusters of disease cases	115
<i>Cluster studies</i>	115
<i>Putative health hazard example</i>	116
<i>Large-scale cluster example</i>	117
References	119
Summary	118
Appendix: Software for Disease Mapping	121
Spatial statistical tools	121
Geographical Information Systems	123
Software availability and web sites	124
<i>DISMAPWIN</i>	124
<i>SPLANCS</i>	124
<i>BUGS and BEAM</i>	124
<i>MLnWIN</i>	124
<i>SATSCAN</i>	124
<i>Stat!, GAMMA, GBAS, SPACESTAT, GS and GEOMED</i>	124
<i>MapInfo</i>	124
<i>ArcView</i>	125
References	125
Glossary	126
Index	128
