<i>Chapter</i>	<i>page</i>
1 Introduction	1
1.1 Integrating results	1
1.2 Goal of the study	2
1.3 Data and measurement model	3
1.4 Baseline model and methodology	4
1.5 Outline of the study	7
1.6 What is new?	9
2 The Unrestricted VAR and its components	11
2.1 Introduction	11
2.2 The model	12
2.3 Univariate processes and unit roots	15
2.4 Integrated processes	18
2.4.1 Definitions and notation	18
2.4.2 MA representation, autocorrelation and pseudo spectrum	20
2.5 Alternative models for nonstationarity, long memory and persistence	23
2.5.1 Nonstationarity	23
2.5.2 Long memory, the variance time function and adjusted range analysis	24
2.5.3 Persistence	32
Appendix A2.1 MA representation integrated process	34
A2.1.1 MA representations	34
A2.1.2 Pseudo autocorrelation functions	35
Appendix A2.2 Univariate testing for unit root nonstationarity	37
A2.2.1 The pure unit root case without deterministic terms	37
A2.2.1.1 Notation and model	37
A2.2.1.2 Discussion	39
A2.2.2 Deterministic terms and unknown residual autocorrelation	40
A2.2.2.1 Generalization of the test regression	40
A2.2.2.2 Interesting null hypotheses, alternatives and tests	43
A2.2.2.3 The parameters δ_i and α_i in (A2.2.11) and (A2.2.12)	46
A2.2.2.4 Test statistics and distributions	50

<i>Chapter</i>	<i>page</i>
A2.2.2.5 Evaluation of methods	55
A2.2.2.6 Other approaches and some extensions	56
3 Data Analysis by Vector Autoregression	59
3.1 Introduction	59
3.2 Data-oriented measures of influence	59
3.2.1 Goal of the influence analysis	60
3.2.2 Influence measures in regression	61
3.2.3 Influence measures for dynamic and multiple equation models	67
3.2.4 Other influence measures from multivariate analysis	70
3.3 Diagnostic checking	71
3.3.1 Choosing test statistics	72
3.3.2 Theoretical consideration for choosing tests	73
3.3.3 Practical considerations for choosing tests	76
3.3.4 Dynamic specification of the mean	78
3.3.5 Distribution of the disturbances	80
3.3.6 Parameter constancy of dynamic and covariance parameters	82
3.3.7 An alternative test for parameter stability	88
3.3.8 Multivariate diagnostics	89
3.3.9 A diagnostic for multivariate unit roots	91
3.3.10 Consequences of "rejection" of the model	94
Appendix A3.1 Influence measures for the normal linear model	95
A3.1.1 Global influence measures	95
A3.1.2 Local influence measures	98
Appendix A3.2 Influence measures for the multivariate general linear model	100
Appendix A3.3 Influence measures in principal component analysis	107
4 Seasonality	109
4.1 Introduction	109
4.2 Application of the idea of unobserved components	110
4.3 Application of linear filters to estimate unobserved components	113
4.3.1 Optimal extraction in multivariate series	113
4.3.2 Optimal extraction in nonstationary series	115
4.3.3 Specification of low dimensional univariate models	117
4.3.4 Optimal extraction in a finite sample	120
4.3.5 Optimal extraction in the presence of outliers	120

<i>Chapter</i>	<i>page</i>
4.4 Data analysis of the seasonal component	120
4.5 Application of the Census X-11 filter in a VAR	123
Appendix 4.1 Trigonometric seasonal processes in regression	128
A4.1.1 Notation and underlying model	128
A4.1.2 Zero correlation between seasonal patterns	128
A4.1.3 Circularity: Unit correlation between seasonal patterns	130
Appendix 4.2 Backforecasts and deterministic changes in mean	131
A4.2.1 Introduction	131
A4.2.2 Backforecasting and deterministic changes in mean with linear trends	131
A4.2.3 Backforecasting and deterministic changes in mean with seasonal dummies	133
A4.2.4 Changes in mean in multivariate model with unit roots	136
5 Outliers	139
5.1 Introduction	139
5.2 The outlier model	140
5.3 Some effects of outliers on VAR estimates	142
5.3.1 Effect of outliers on unit root tests	142
5.3.2 Effect of outliers on estimates of Φ	144
5.4 Derivation of the LM-statistics	146
5.4.1 Case of known parameters and timing	146
5.4.2 Case of estimated parameters and unknown timing	149
5.4.3 Distinguishing between outlier types	150
5.4.4 Distinguishing between outliers in different equations	152
5.5 An artificial example	153
5.6 Application to macroeconomic series	171
5.7 Two simple ways to study the influence of outliers	185
Appendix 5.1 Some proofs concerning outlier test statistics	193
A5.1.1 Derivation simultaneous test	193
A5.1.2 Finite sample alternatives for I test procedure	195
Appendix 5.2 Subsample analysis outlier influence	196
Appendix 5.3 Robust estimation by extraction of additive outliers	198
6 Restrictions on the VAR	204
6.1 Introduction	204
6.2 Cointegration, the number of unit roots, and common trends	206

<i>Chapter</i>	<i>page</i>
6.2.3 Vector error correction	209
6.2.4 Other parameterizations	211
6.3 Straightforward transformation formulae	212
6.3.1 From Campbell–Shiller to vector error correction	213
6.3.2 From vector error correction to Campbell–Shiller, mean growth	215
6.3.3 From vector error correction to common trends	218
6.3.4 Examples	221
6.3.5 Conditions for VECM, $I(2)$ -ness, and explosive systems	222
6.4 Trend stationary processes and quadratic trends	225
6.5 Estimating pushing trends and pulling equilibria	227
6.5.1 Deterministic trends	227
6.5.2 Estimating the stochastic part of the trend	228
6.5.3 Estimating pulling equilibria	232
6.6 Multivariate tests for unit roots	237
6.6.1 Models with $p=1$ and zero mean	237
6.6.2 Deterministic terms and serial correlation in AR(1) residuals	239
Appendix 6.1 Computation and distribution multivariate unit root test statistics	242
A6.1.1 Computation	242
A6.1.2 Distribution	244
7 Applied VAR Analysis for Aggregate Investment	248
7.1 Introduction	248
7.2 The variable of interest and some of its supposed relationships	249
7.2.1 Theoretical relationships	249
7.2.2 Empirical models	251
7.3 Measurement model	256
7.3.1 Investment in the national accounts	257
7.3.2 Definition of investment	257
7.3.3 Other macroeconomic price indexes	259
7.4 Univariate analysis	260
7.4.1 The variables	260
7.4.2 Graphs and influence analysis	260
7.4.3 Representations of the autocorrelation function	265
7.4.4 Adjusted range techniques	266

<i>Chapter</i>	<i>page</i>
7.4.6 Application	269
7.4.7 Results	270
7.4.7.1 Outliers	270
7.4.7.2 Autocorrelations	271
7.4.7.3 Long memory analysis	274
7.4.7.4 Data analysis seasonal components	275
7.4.7.5 Variance time functions	276
7.4.7.6 Statistical unit root analysis	277
7.4.7.7 Parameter stability	279
7.4.7.8 Summary of univariate results	281
7.5 Multivariate analysis	281
7.5.1 Predictions and seasonality in the unrestricted VAR	281
7.5.2 Unit root analysis	290
7.5.3 Detecting a structural break	299
7.5.4 The final model	303
Appendix 7.1 Data sources and construction	325
Appendix 7.2 Results of final VECM model	326
Appendix 7.3 Open economy stochastic dynamic general equilibrium models	328
Summary	329
