Preface		xvii
CHAPTER 1	INTRODUCTION TO NETWORK MODELING	1
1.1	Introduction	1
1.2	Networks as Complex Systems	1
1.3	Modeling Complex Systems	3
1.4	Modeling in Network Architecture	8
1.5	Modeling in Network Operations	10
1.6	Modeling in Network Management	14
1.7	The Multiparadigmatic Modeling Methodology	17
1.8	Summary	18
CHAPTER 2	PRINCIPLES OF OBJECT-ORIENTED MODELING	19
2.1	Introduction	19
2.2	Conceptual Background	19
2.3	Abstraction	21
2.4	Encapsulation	23
2.5	Classification	24
2.6	Attributes	27
2.7	Functions	28
2.8	Inheritance and Extension	29
2.9	Instantiation	33
2.10	Aggregation	34
2.11	Summary	35
CHAPTER 3	OBJECT-ORIENTED MODELING VERSUS OBJECT-ORIENTED PROGRAMMING	36
3.1	Introduction	36
3.2	Conceptual Background	36

3.3	Reusability	37	
3.4	Relationships	38	
3.5	Monotonic Inheritance	38	
3.6	Multiple Inheritance	39	
3.7	Overriding	40	
3.8	Polymorphism	40	
3.9	Dynamic Binding	41	
3.10	Delegation	41	
3.11	Visibility Control	42	
3.12	Declarative Instantiation	42	
3.13	Inter-Object Communication	43	
3.14	Non-Referent Classes	43	
3.15	Subclasses versus Subtypes	44	
3.16	Specification versus Implementation	45	
3.17	Type Knowledge	45	
3.18	Object Persistence	46	
3.19	Language Implementation Issues	46	
3.20	Using Object-Oriented Modeling and Programming Together	47	
3.21	Summary	47	
CHAPTER 4	DESIGNING OBJECT CLASSES		50
4.1	Introduction	50	
4.2	Specifying Object Classes	50	
4.3	Core Property Specification	51	
4.4	Variant Property Specification	52	
4.5	Capsules	53	
4.10	Summary	59	
CHAPTER 5	SPECIALIZATION AND GENERALIZATION		60
5.1	Introduction	60	
5.2	Conceptual Background	60	
5.3	Ancestral and Descendant Classes	63	
5.4	Classes and Instances	66	
5.5	Summary	71	
CHAPTER 6	THE OBJECT INHERITANCE HIERARCHY		72
6.1	Introduction	72	
6.2	Basis of Specialization	72	
6.3	Quantitative Basis of Specialization	73	
6.4	Qualitative Basis of Specialization	74	
6.5	Basis-Free Specialization	76	
6.6	Disjoint and Complete Specialization	76	
6.7	Compound Specialization	80	
6.8	Specialization by Argument Contravariance	83	
6.9	Specialization by Result Covariance	85	
6.10	Specialization by Capsule Fixing	86	

6.11	Specialization Principles: Addition, Restriction, and Extension	87
6.12	Multiple Inheritance	89
6.13	Principles of Hierarchy Normalization	93
6.14	Hierarchy Design	98
6.15	Summary	99
CHAPTER 7	THE OBJECT AGGREGATION HIERARCHY	100
7.1	Introduction	100
7.2	Conceptual Background	100
7.3	Aggregation versus Inheritance	103
7.4	Use of Aggregation	105
7.5	Aggregation versus Capsules	107
7.6	Component Multiplicity	108
7.7	Advanced Component Multiplicity Concepts	110
7.8	Aggregation Principles	114
7.9	Component and Aggregate Addition	116
7.10	Component Multiplicity Restriction	119
7.11	Component and Aggregate Specialization	123
7.12	Aggregation for Naming and Addressing	127
7.13	Summary	128
CHAPTER 8	OBJECT-ORIENTED ARCHITECTURE OF A NODAL PROCESSOR	129
8.1	Introduction	129
8.2	Requirements for the Nodal Processor	129
8.3	Architecture of the Nodal Processor	131
8.4	The Nodal Processor Inheritance Hierarchy	137
8.5	The Nodal Processor Aggregation Hierarchies	141
8.6	Products of the Nodal Processor Family	142
8.7	Architectures for Nodal Processor Products	145
8.8	Principles for Architecting Nodal Processor Products	152
8.9	High-Order Aggregations	155
8.10	Summary	157
CHAPTER 9	THE OBJECT REGISTRATION HIERARCHY	158
9.1	Introduction	158
9.2	Conceptual Background	158
9.3	Design of Registration Name Spaces	159
9.4	Structuring Registration Hierarchies	161
9.5	The International Registration Hierarchy	163
9.6	Other International Registration Hierarchies	164
9.7	Linking to the International Hierarchy	168
9.8	Achieving Interoperability	169
9.9	Summary	170

CHAPTER 10	INTRODUCTION TO NETWORK MODELING SYNTAX	171
10.1	Introduction	171
10.2	Formalism in Network Modeling	171
10.3	Elements of ASN.1	173
10.4	Information Object Classes	179
10.5	Using Information Object Classes	181
10.6	Attribute Value Predicates	185
10.7	Constrained Types	187
10.8	Parameterized Types	191
10.9	Specifying Collections	193
10.10	Specifying Domains	197
10.11	Other Logical Predicates	200
10.12	Putting It All Together	202
10.13	Summary	204
CHAPTER 11	FORMAL MODELING OF NETWORK OBJECTS	206
11.1	Introduction	206
11.2	Object Classes	206
11.3	Using Attributes in Classes	210
11.4	Attributes	212
11.5	Functions	212
11.6	Capsules	217
11.7	The Inheritance Hierarchy	217
11.8	Aggregation Hierarchies	224
11.9	Summary	227
CHAPTER 12	OBJECT MODELING APPLICATION EXAMPLES	228
12.1	Introduction	228
12.2	Device Object Classes	228
12.3	Protocol Object Classes	233
12.4	Service Object Classes	238
12.5	Specifying Service Objects	245
12.6	Summary	251
CHAPTER 13	OBJECT FUNCTION BEHAVIOR	252
13.1	Introduction	252
13.2	Formal Description Techniques	252
13.3	Graphical Formal Descriptions	253
13.4	Notational Formal Descriptions	259
13.5	Formal Description of Software Objects	267
13.6	Formal Description of Hardware Objects	268
13.7	Specialization by Function Extension	270
13.8	Reuse of Formal Specifications	273
13.9	Summary	275
CHAPTER 14	FORMAL BEHAVIOR MODELS	276
14.1	Introduction	276

14.2	Referencing Formal Specifications	276	
14.3	Covariance and Contravariance	281	
14.4	Specialization by Function Extension	286	
14.5	Summary	287	
CHAPTER 15	MODELING NETWORK PROTOCOLS		288
15.1	Introduction	288	
15.2	Conceptual Background	288	
15.3	Reference Models	289	
15.4	Protocol Entities	293	
15.5	Protocol Layering	297	
15.6	Protocol Stacks	300	
15.7	Isochronous Communication	301	
15.8	Protocol Planes	305	
15.9	Ports	309	
15.10	Bandedness	314	
15.11	Classifying Network Devices	315	
15.12	Summary	317	
CHAPTER 16	FORMAL PROTOCOL MODELS		318
16.1	Introduction	318	
16.2	Modeling Reference Models	318	
16.3	Protocol Entities	321	
16.4	Protocol Layering	323	
16.5	Protocol Stacks	325	
16.6	Ports	329	
16.7	Summary	330	
CHAPTER 17	OBJECT CLASS RELATIONSHIPS		331
17.1	Introduction	331	
17.2	Conceptual Background	331	
17.3	Subjects, Relatants, and Roles	333	
17.4	Subject and Relatant Multiplicity	336	
17.5	Attribute-Defined Multiplicity	339	
17.6	Relationship Attributes	340	
17.7	Relationship Inheritance	342	
17.8	Relationship Addition	344	
17.9	Relatant Multiplicity Restriction	345	
17.10	Subject Multiplicity Regression	349	
17.11	Relatant Specialization	356	
17.12	Relationship Attribute Restriction	357	
17.13	Relatant Attribute Restriction	360	
17.14	Specialization Principles	362	
17.15	What Else Is a Relationship?	366	
17.16	Associations versus Relationships	370	
17.17	Normalization of Relationships	374	
17.18	Other Methods of Modeling Relationships	378	

17.19	New Relationship Modeling Approaches	381
17.20	Summary	384
CHAPTER 18	VIRTUAL RELATIONSHIPS	385
18.1	Introduction	385
18.2	Conceptual Background	385
18.3	Commutative Virtual Relationships	387
18.4	Transitive Virtual Relationships	390
18.5	Distributive Virtual Relationships	391
18.6	Convolute Virtual Relationships	395
18.7	Implicate Virtual Relationships	399
18.8	Applying Virtual Relationships	403
18.9	Multiplicities of Virtual Relationships	406
18.10	Virtual Relationships for Specialization	407
18.11	Use of Virtual Relationships	408
18.12	Summary	409
CHAPTER 19	FORMAL MODELING OF RELATIONSHIPS	410
19.1	Introduction	410
19.2	Formal Specification of Roles	410
19.3	Formal Relationship Notation	412
19.4	Relationship Attributes	417
19.5	Virtual Relationships	419
19.6	Aggregation as a Relationship	423
19.7	Protocol Layerings as Relationships	425
19.8	Multiplicity-Based Specialization	426
19.9	Relationship Addition and Relatant Specialization	428
19.10	Relatant-Property-Based Specialization	431
19.11	Relationship Instance Predicates	433
19.12	Summary	434
CHAPTER 20	VIRTUAL ATTRIBUTES	435
20.1	Introduction	435
20.2	Conceptual Background	435
20.3	An Example of Virtual Attributes	438
20.4	Conditional Virtual Attributes	441
20.5	Tracked Virtual Attributes	442
20.6	Multiply-Tracked Virtual Attributes	445
20.7	Syntax of Tracked Virtual Attributes	447
20.8	Relatant Ordering	448
20.9	Relatant Information Functions	450
20.10	Virtual Attributes of Aggregate Classes	453
20.11	Other Examples of Virtual Attributes	455
20.12	Contingent Base Attributes	457
20.13	Tracked Virtual Functions	459
20.14	Tracking through Virtual Relationships	460
20.15	Virtual Attributes in Specialization	461

20.16	Summary	462	
CHAPTER 21	VIRTUAL OBJECT CLASSES		464
21.1	Introduction	464	
21.2	Conceptual Background	464	
21.3	Creating Virtual Object Classes	466	
21.4	Selected Virtual Classes	467	
21.5	Modes of Virtualization by Selection	470	
21.6	Projected Virtual Classes	474	
21.7	Using Projection	475	
21.8	Conjunct Virtual Classes	478	
21.9	Conjunction and Multiplicity	481	
21.10	Virtualization, Specialization, and Relationships	487	
21.11	Comparison with the Relational Model	488	
21.12	Summary	490	
CHAPTER 22	OBJECT CLASS CONSTRAINTS		492
22.1	Introduction	492	
22.2	Conceptual Background	492	
22.3	Modeling Constraints	496	
22.4	Constraint Addition	504	
22.5	Constraint Restriction	506	
22.6	System-Spanning Constraints	508	
22.7	Summary	509	
CHAPTER 23	OBJECT CLASS RULES		510
23.1	Introduction	510	
23.2	Inference Rules and Triggers	510	
23.3	Conceptual Background	515	
23.4	Rule Addition	520	
23.5	Rule Precondition Contravariance	521	
23.6	Rule Function Addition	526	
23.7	Using Rules	527	
23.8	System-Spanning Rules	528	
23.9	Summary	529	
CHAPTER 24	FORMAL MODELS FOR INFERRED SEMANTICS		530
24.1	Introduction	530	
24.2	Virtual Attributes and Functions	530	
24.3	Attribute-Defined Expressions	534	
24.4	Tracked Properties	536	
24.5	Classes with Virtual Properties	539	
24.6	Ordered Relationships	542	
24.7	Virtual Object Classes	544	
24.8	Object Constraints and Rules	546	
24.9	Specialization Using Constraints and Rules	549	
24.10	Summary	553	

CHAPTER 25	THE METAMODEL	554
25.1	Introduction	554
25.2	The Metamodel	554
CHAPTER 26	THE THEORY AND ITS IMPLEMENTATION	563
26.1	Introduction	563
26.2	The Modeling Methodology	563
26.3	Confluence of Multiple Paradigms	564
26.4	Toward an Object Calculus	566
26.5	Some Implementation Issues	569
26.6	Implementation Platforms	571
26.7	Application Information Bases	575
26.8	Summary	576
CHAPTER 27	MODELING FOR NETWORK ARCHITECTURE	578
27.1	Introduction	578
27.2	Network Architecture and Planning	578
27.3	Automated Network Synthesis	580
27.4	Connectivity and Interconnectivity	583
27.5	Network Synthesis Constraints	586
27.6	Algorithms for Synthesis Automation	586
27.7	Network Topology Optimization	588
27.8	Virtual Classes for Network Views	590
27.9	Network Simulation	591
27.10	Traffic Engineering	593
27.11	The Simulation Environment	595
27.12	Synthesis with Simulation	599
27.13	Summary	599
CHAPTER 28	MODELING FOR NETWORK OPERATIONS	600
28.1	Introduction	600
28.2	Network Operations	600
28.3	Interoperability and Interworkability	603
28.4	The Intelligent Network	611
28.5	Distributed Computing Systems	617
28.6	Intelligent Networks versus Networked Intelligence	620
28.7	Shared Conceptual Schema	622
28.8	Summary	624
CHAPTER 29	MODELING FOR NETWORK MANAGEMENT	625
29.1	Introduction	625
29.2	Network Management	625
29.3	The SNMP Object Model	628
29.4	Commentary: SNMP Information Model	638
29.5	The OSI Management Object Model	640
29.6	Commentary: OSI Management Information Model	655
29.7	The Telecommunications Management Network	659

29.8	Distributed Object Management	662	
29.9	Multiple Information Models	665	
29.10	Summary	667	
CHAPTER 30	THE FUTURE OF NETWORK MODELING		669
30.1	Network Modeling	669	
30.2	Specification Models versus Implementation Models	670	
30.3	Benefits of Formal Specification	670	
30.4	How Much Should We Specify?	671	
30.5	Prospects for Architecture Modeling	672	
30.6	Prospects for Operations Modeling	673	
30.7	Prospects for Management Modeling	674	
30.8	Future Challenges in Network Modeling	675	
	Glossary: Object-Oriented Modeling Terminology		677
	Glossary: Communications Terminology		697
	Glossary: ASN.1 Terminology		709
