

TABLE OF CONTENTS

EXPLANATORY NOTE	9
------------------------	---

CHAPTER 1

Overview

I. INTRODUCTION	11
II. THE GREENHOUSE EFFECT	12
<i>A. Mechanism.</i>	12
<i>B. Regional Changes.</i>	13
III. THE GREENHOUSE GASES	14
<i>A. Carbon dioxide.</i>	15
<i>B. Methane.</i>	17
<i>C. Nitrous Oxide (N₂O).</i>	18
<i>D. Chlorofluorocarbons (CFCs)</i>	19
<i>E. Tropospheric Ozone</i>	19
<i>F. Energy Versus Non-energy Sources.</i>	20
<i>G. The Relative Importance of the Greenhouse Gases.</i>	20
IV. INTERACTIONS WITH OTHER ENVIRONMENTAL CHANGES	22
REFERENCES	23

CHAPTER 2

Global energy outlook

I. INTRODUCTION	25
II. METHODOLOGY AND ASSUMPTIONS	25
III. ENERGY OUTLOOK	28
<i>A. Oil.</i>	28
<i>B. Natural Gas</i>	32
<i>C. Coal and Other Solid Fuels</i>	33
<i>D. Hydroelectric Power.</i>	35
<i>E. Nuclear Power</i>	35
<i>F. Total Energy Demand.</i>	37
<i>G. Fuel and Regional Shares.</i>	38

IV. ALTERNATIVE SCENARIO.....	39
V. CONCLUSIONS.....	41

CHAPTER 3

Greenhouse gas emission factors and emissions projections through 2005

I. INTRODUCTION	43
II. SUMMARY OF GREENHOUSE GAS EMISSION OUTLOOKS	45
A. CO ₂ Emissions	46
B. CH ₄ Emissions	50
C. NO _x Emissions	53
D. CO Emissions	56
III. OVERVIEW OF APPROACH TO GREENHOUSE GAS ESTIMATION	59
A. CO ₂ Estimation	61
B. Other Greenhouse Gas Estimation.....	64
1. CH ₄ Estimation.....	65
2. NO _x Estimation	70
3. CO Estimation.....	72
IV. FUTURE WORK	73
V. SUMMARY AND CONCLUSIONS.....	73
REFERENCES	76

CHAPTER 4

Energy technology options for limiting emissions of greenhouse gases

I. INTRODUCTION	81
II. A FRAMEWORK FOR TECHNOLOGICAL RESPONSES TO ENERGY-INDUCED GLOBAL CLIMATE CHANGE.....	82
A. <i>The Need for an Integrated Approach to Evaluating Technology Options</i> ..	82
B. <i>Courses of Action for Limiting Emissions of Greenhouse Gases</i>	83
C. <i>Phased Technology Responses to Energy-Induced Global Climate Change</i> ..	84

III.	CRITICAL FACTORS FOR THE SELECTION AND IMPLEMENTATION OF TECHNOLOGY OPTIONS FOR LIMITING EMISSIONS OF GREENHOUSE GASES.....	85
	<i>A. Potential of Technology Options.....</i>	85
	<i>B. Timing of Phases Actions.....</i>	85
	<i>C. Regional Factors.....</i>	87
IV.	TECHNOLOGIES AND ENERGY SYSTEMS FOR LIMITING GREENHOUSE GAS EMISSIONS.....	88
	<i>A. Efficiency Improvements in Energy Supply, Conversion and End-Use.....</i>	90
	<i>B. Fuel Substitution by Energy Sources Lower in Greenhouse Gas Emissions..</i>	91
	1. Lower Carbon Energy Sources.....	91
	2. Non-Carbon Energy Sources.....	93
	<i>C. Removal, Recirculation or Fixation of Greenhouse Gases.....</i>	94
	1. Removal of CO ₂ from Exhaust Gases of Combustion Plants.....	94
	2. Absorption of Atmospheric CO ₂ in Biomass.....	95
V.	APPLICATION OF TECHNOLOGIES FOR LIMITING GREENHOUSE EMISSIONS BY SECTOR.....	96
	<i>A. Transport Sector.....</i>	97
	<i>B. Residential/Commercial Buildings Sector.....</i>	99
	<i>C. Industrial Sector.....</i>	102
	<i>D. Electricity Sector.....</i>	103
VI.	INTERNATIONAL TECHNOLOGY RESPONSES TO LIMIT GREENHOUSE GAS EMISSIONS.....	106
	<i>A. The Integrated Approach Applied Nationally and Internationally.....</i>	106
	<i>B. Energy RD&D and International Collaboration.....</i>	107
	<i>C. Means for Enhanced Information Exchange.....</i>	107
VII.	SUMMARY AND CONCLUSIONS.....	108
	<i>A. Framework for Analysis and Selection of National Technological Options and Strategies.....</i>	109
	<i>B. Phased Actions for the Implementation of Technological Options and Strategies.....</i>	109
	<i>C. Co-ordination of National Approaches and International Co-operation.....</i>	110

CHAPTER 5

Policy instruments to implement near-term greenhouse gas limitation strategies in the energy sector

I.	INTRODUCTION.....	111
II.	A CONCEPTUAL FRAMEWORK FOR ANALYSIS.....	113

III.	CRITICAL FACTORS FOR THE SELECTION AND IMPLEMENTATION OF TECHNOLOGY OPTIONS FOR LIMITING EMISSIONS OF GREENHOUSE GASES.....	85
	A. <i>Potential of Technology Options</i>	85
	B. <i>Timing of Phases Actions</i>	85
	C. <i>Regional Factors</i>	87
IV.	TECHNOLOGIES AND ENERGY SYSTEMS FOR LIMITING GREENHOUSE GAS EMISSIONS.....	88
	A. <i>Efficiency Improvements in Energy Supply, Conversion and End-Use</i>	90
	B. <i>Fuel Substitution by Energy Sources Lower in Greenhouse Gas Emissions</i> ..	91
	1. Lower Carbon Energy Sources.....	91
	2. Non-Carbon Energy Sources.....	93
	C. <i>Removal, Recirculation or Fixation of Greenhouse Gases</i>	94
	1. Removal of CO ₂ from Exhaust Gases of Combustion Plants.....	94
	2. Absorption of Atmospheric CO ₂ in Biomass.....	95
V.	APPLICATION OF TECHNOLOGIES FOR LIMITING GREENHOUSE EMISSIONS BY SECTOR.....	96
	A. <i>Transport Sector</i>	97
	B. <i>Residential/Commercial Buildings Sector</i>	99
	C. <i>Industrial Sector</i>	102
	D. <i>Electricity Sector</i>	103
VI.	INTERNATIONAL TECHNOLOGY RESPONSES TO LIMIT GREENHOUSE GAS EMISSIONS.....	106
	A. <i>The Integrated Approach Applied Nationally and Internationally</i>	106
	B. <i>Energy RD&D and International Collaboration</i>	107
	C. <i>Means for Enhanced Information Exchange</i>	107
VII.	SUMMARY AND CONCLUSIONS.....	108
	A. <i>Framework for Analysis and Selection of National Technological Options and Strategies</i>	109
	B. <i>Phased Actions for the Implementation of Technological Options and Strategies</i>	109
	C. <i>Co-ordination of National Approaches and International Co-operation</i>	110

CHAPTER 5

Policy instruments to implement near-term greenhouse gas limitation strategies in the energy sector

I.	INTRODUCTION.....	111
II.	A CONCEPTUAL FRAMEWORK FOR ANALYSIS.....	113

III. EVALUATION OF POLICY OPTIONS	116
A. <i>Principal Near-Term Responses that Limit Greenhouse Gas Emissions</i>	117
1. Increased energy efficiency.	117
2. Fuel substitution	118
3. Emissions abatement	118
B. <i>Evaluation of Policy Instruments by Sector</i>	119
1. The Utility Sector	119
2. The Industrial Sector	122
3. The Transport Sector	124
4. The Residential/Commercial Sector	127
IV. SUMMARY AND CONCLUSIONS	133
NOTES AND REFERENCES	136
ANNEX A : GHG EMISSION TRENDS: NUMERICAL DATA AND RESULTS	139
ANNEX B : CO ₂ EMISSION FACTOR DISCUSSION	151
ANNEX C : STATIONARY SOURCE NON-CO ₂ EMISSION FACTORS AND ENERGY DATA	157
ANNEX D : MOBILE SOURCE NON-CO ₂ EMISSION FACTORS AND ENERGY DATA	165
ANNEX E : DETAILED END-USE EMISSION FACTORS	175
ANNEX F : SUMMARY OF KEY COMMITMENTS AND RECOMMENDATIONS BY MAJOR INTERNATIONAL AND NATIONAL ENTITIES ON CLIMATE CHANGE AS OF APRIL 1990	183

TABLES

1.1	Role of the Different Greenhouse Gases	14
1.2	Methane Emission Rates from Individual Ecosystems	18
2.1	Major Demographic and Economic Activity Assumptions	27
2.2	Energy Price Outlook	28
2.3-2.4	World Primary Energy Requirements Rising Oil Price Case	29, 30
2.5	World Market Share by Region Rising Oil Price Case	31
2.6	Deviation in Consumption between Constant Crude Oil Price Case and Rising Oil Price Case	40

3.1a	Comparative Average Annual Growth Rates (%) of Economies, Energy and Greenhouse Gas Emissions 1987 to 2005, Rising Oil Price Case	45
3.1b	Constant Oil Price Case	45
3.2	Variation of CO ₂ Emission Factors for Use with TPER	62
3.3	CO ₂ Emission Factors (LHV) for TPER	64
3.4	Methane Emission Factor Assumptions.	67
3.5	Regional Shares of Emissions for each Greenhouse Gas in 2005 - Rising Oil Price Case	74
3.6	Sectoral Shares of Emissions for each Greenhouse Gas in 2005 - Rising Oil Price Case	75
3.7	Fuel Shares of Emissions for each Greenhouse Gas in 2005 - Rising Oil Price Case	75
4.1	Examples of Technology Options to Reduce the Accumulation of Energy-Related Greenhouse Gases	89
4.2	Carbon Dioxide Emissions : Electric Technologies	92
4.3	Examples of Technology Strategies and Actions in each Major Energy Sector, to Cope with Possible Global Climate Change.	96
4.4	Emissions of Greenhouse Gases from Alternative Vehicular Fuels.	98
4.5	Possible Savings in Buildings, Best Available Technology vs. Stock Average .	100
4.6	Possible Savings in Industry, Best Available Technology vs. Stock Average. .	102
4.7	CO ₂ and Efficiency Levels of Various New Coal-Fired Power Plant	103
5.1	Economic Opportunities for Efficiency Improvements Summary of Selected Electricity End-Uses.	129
5.2	Summary of Information Programmes for Energy Conservation.	132

FIGURES

1	Global CO ₂ Emissions by Region	15
2	CO ₂ Emission Factors.	16
3	Global CO ₂ Production by Source 1950-1986.	17
4	Decadal Increments of Greenhouse Forcing.	21
5	World CO ₂ Emissions Outlook 1987-2005	47
6	World CO ₂ Emissions Outlook 1987-2005	48
7	OECD CO ₂ Emissions by Region 1987-2005	49
8	World CO ₂ Emissions by Sector 1980-2005	49
9	OECD CO ₂ Emissions Outlook by Sector 1980-2005	50
10	World CO ₂ Emission Fuel Shares in 2005	51
11	World Methane Emissions by Region 1987-2005	52
12	World Methane Emissions by Source 1987-2005.	52
13	NO _x Emissions Outlook 1980-2005.	54
14	World NO _x Emissions Outlook by Sector 1980-2005	54
15	OECD NO _x Emissions Outlook by Sector 1980-2005.	55
16	World NO _x Emission Outlook by Fuel 1980-2005	56
17	World CO Emissions Outlook by Region 1980-2005.	57
18	OECD CO Emissions Outlook by Sector 1980-2005.	57
19	World CO Emission Outlook by Sector 1980-2005.	58
20	World CO Emission Outlook by Fuel 1980-2005	59
21	Framework for Energy and Environment Decision Making	114
