

CONTENTS

Preface	viii
Introduction	ix
WORLD I: CELLS	1
Chapter 1: Membranes, Particles, and Potentials	3
1.1. Complex System Approach	3
1.2. The Biological Membrane	5
1.3. Movement in a Solution	6
1.4. Concentration of Water: Osmosis	7
1.5. Movement of Ions	8
Chapter 2: Action Potential	10
2.1. Creation of Membrane Potential	10
2.2. Basic Features of Action Potential	12
2.3. Mechanism of Generation of Action Potential	13
Chapter 3: Information Conduction and Transmission	17
3.1. Conduction of Action Potential	18
3.2. Myelinated Fibers	19
3.3. The Structure of the Neuron	20
3.4. Information Coding in the Nervous System	22
3.5. Synaptic Transmission	22
3.6. Neurotransmitters	23
3.7. Temporal and Spatial Summation	23
Chapter 4: The Skeletal Muscle	26
4.1. Skeletal Muscle: Structure	26
4.2. Myofilaments	27
4.3. Neuromuscular Synapse	27
4.4. Mechanism of Contraction	29
4.5. Types of Muscle Contraction	30
4.6. Elements of Mechanics	31
4.7. Force-Length and Force-Velocity Relations	32
4.8. External Regimes of Muscle Contraction	33
Chapter 5: Receptors	35
5.1. General Classification and Properties of Receptors	35
5.2. Muscle Spindles	36
5.3. The Gamma System	38
5.4. Golgi Tendon Organs	39

- 5.5. Other Muscle Receptors 40
- 5.6. Articular Receptors 40
- 5.7. Cutaneous Receptors 40
- 5.8. Where Does the Information Go? 41

Chapter 6: Motor Units and Electromyography 43

- 6.1. The Notion of Motor Unit 43
- 6.2. Fast and Slow Motor Units 44
- 6.3. The Henneman Principle (Size Principle) 45
- 6.4. Functional Role of Different Motor Units 46
- 6.5. Electromyography 47
- 6.6. Filtering, Rectification, and Integration 48

World-I Problems 51

World-I Recommended Readings 51

WORLD II: CONNECTIONS 53

Chapter 7: Excitation and Inhibition Within the Spinal Cord 55

- 7.1. The Spinal Cord 55
- 7.2. Excitation Within the Central Nervous System 57
- 7.3. Postsynaptic Inhibition 58
- 7.4. Renshaw Cells 59
- 7.5. Ia-Interneurons 60
- 7.6. Presynaptic Inhibition 61

Chapter 8: Monosynaptic Reflexes 64

- 8.1. Reflexes 64
- 8.2. Reflex Arc 64
- 8.3. H-Reflexes, T-Reflexes, and M-Response 65
- 8.4. The Effects of Voluntary Muscle Activation on Monosynaptic Reflexes 69
- 8.5. F-Wave 69

Chapter 9: Oligosynaptic and Polysynaptic Reflexes 71

- 9.1. Oligosynaptic Reflexes 71
- 9.2. Polysynaptic Reflexes 73
- 9.3. Flexor Reflex 74
- 9.4. Tonic Stretch Reflex 74
- 9.5. Tonic Vibration Reflex 76
- 9.6. Interaction Among Reflex Pathways 77
- 9.7. Interjoint and Interlimb Reflexes 79

Chapter 10: Voluntary Control of a Single Muscle 80

- 10.1. Feedforward and Feedback Control 80
- 10.2. Servo Control 82
- 10.3. The Servo Hypothesis 83
- 10.4. Alpha-Gamma Coactivation 85
- 10.5. Voluntary Activation of Muscles 85
- 10.6. Equilibrium-Point Hypothesis 85

Chapter 11: Patterns of Single-Joint Movements 88

- 11.1. Isotonic Movements and Isometric Contractions 88
- 11.2. Performance and Task Parameters 89
- 11.3. Electromyographic Patterns During Single-Joint Isotonic Movements 91
- 11.4. Electromyographic Patterns During Single-Joint Isometric Contractions 94
- 11.5. The Dual-Strategy Hypothesis 96

Chapter 12: Preprogrammed Reactions 98

- 12.1. Preprogrammed Reactions 98
- 12.2. Preprogrammed Reaction Is Not a Stretch Reflex 100

12.3. In Search of the Afferent Source of Preprogrammed Reactions	100
12.4. Preprogrammed Reactions During Movement Perturbations	101
12.5. Basic Features of Preprogrammed Reactions	102
12.6. Preprogrammed Corrections of Vertical Posture	103
12.7. Corrective Stumbling Reaction	104
World-II Problems	105
World-II Recommended Readings	105
WORLD III: STRUCTURES	107
Chapter 13: Methods of Brain Study and Elements of the Brain Anatomy	109
13.1. Single-Neuron Recording	109
13.2. Electroencephalography	110
13.3. Evoked Potentials	111
13.4. Radiography	112
13.5. Computerized Tomography	112
13.6. Positron Emission Tomography	112
13.7. Magnetic Resonance Imaging	113
13.8. Neuroanatomical Tracing	113
13.9. Major Brain Structures	114
Chapter 14: Cerebral Cortex	121
14.1. Cerebral Hemispheres	121
14.2. Structure of the Cerebral Cortex	122
14.3. Primary Motor and Premotor Areas	123
14.4. Inputs to Motor Cortex	124
14.5. Outputs of Motor Cortex	125
14.6. Preparation for a Voluntary Movement	126
14.7. Neuronal Population Vectors	127
Chapter 15: The Cerebellum	129
15.1. Anatomy of the Cerebellum	129
15.2. Cerebellar Inputs	131
15.3. Cerebellar Outputs	132
15.4. Relation of Cerebellar Activity to Voluntary Movement	135
15.5. Neuronal Population Vectors	135
15.6. The Effects of Cerebellar Lesions	135
Chapter 16: The Basal Ganglia	139
16.1. Anatomy of the Basal Ganglia	139
16.2. Inputs and Outputs of the Basal Ganglia	140
16.3. Motor Circuits Involving the Basal Ganglia	141
16.4. Activity of the Basal Ganglia During Movements	142
16.5. Effects of Lesions of the Basal Ganglia	143
Chapter 17: Ascending and Descending Pathways	145
17.1. Basic Properties of Neural Pathways	145
17.2. Afferent Input to the Spinal Cord	146
17.3. Dorsal Column Pathway	146
17.4. Spinocervical Pathway	147
17.5. Spinothalamic Tract	147
17.6. Spinocerebellar Tracts	147
17.7. Spinoreticular Tract	148
17.8. Pyramidal Tract	149
17.9. Rubrospinal Tract	150
17.10. Vestibulospinal Tracts	150
17.11. Reticulospinal Tract and Other Descending Tracts	150
17.12. Propriospinal Tracts	151

Chapter 18: Memory	152
18.1. Descartes' Dualism and Cellular Mechanisms of Memory	152
18.2. Habituation of Reflexes	153
18.3. Learning and Memory	153
18.4. Types of Learning	153
18.5. Conditioned Reflexes	154
18.6. Short-Term and Long-Term Memories	155
18.7. Neuronal/Synaptic Mechanisms of Memory?	155
18.8. Retrieval of Memory	156
18.9. Genetic Code as an Example of Memory	157
18.10. Plasticity in the Brain	157
18.11. Korsakoff's Syndrome	157
18.12. Possible Role of Hippocampus in Memory	158
18.13. Spinal Memory	158
World-III Problems	160
World-III Recommended Readings	160
WORLD IV: BEHAVIORS	161
Chapter 19: Postural Control	163
19.1. Vertical Posture	163
19.2. Vestibular System	164
19.3. The Role of Vision in Postural Control	165
19.4. The Role of Proprioception in Postural Control	166
19.5. Anticipatory and Corrective Postural Adjustments	167
19.6. The Notion of Postural Synergy	170
Chapter 20: Locomotion	172
20.1. Two Approaches to Locomotion	172
20.2. Central Pattern Generator	173
20.3. Locomotor Centers	173
20.4. Spinal Locomotion	175
20.5. Gait Patterns	175
20.6. Corrective Stumbling Reaction	175
20.7. Dynamic Pattern Generation	176
Chapter 21: Multi-Joint Movement	179
21.1. General Features of Targeted Movements	179
21.2. Major Problems of Controlling Natural Reaching Movements	180
21.3. Spinal Mechanisms of Multi-Joint Coordination: Interjoint Reflexes	183
21.4. Spinal Mechanisms of Multi-Joint Coordination: Control Variables	183
21.5. Supraspinal Mechanisms	184
21.6. The Equilibrium-Trajectory Hypothesis	185
21.7. What Is Controlled?	186
Chapter 22: Vision	188
22.1. The Eye	188
22.2. Photoreceptors	188
22.3. Retina and Optic Nerve	189
22.4. Oculomotor Control	190
22.5. Central Mechanisms of Visual Perception	192
22.6. The Role of Visual Information in Voluntary Movements	194
Chapter 23: Kinesthesia	195
23.1. Which Physical Variables Are Sensed by Proprioceptors?	195
23.2. Peripheral Sources of Kinesthetic Information	195
23.3. The Role of the Motor Command in Kinesthesia	198

23.4. Where Does the Information Go?	199
23.5. Kinesthetic Illusions	201
23.6. Pain	201
Chapter 24: Fatigue	204
24.1. Fatigue and Its Contributors	204
24.2. Muscular Mechanisms of Fatigue	205
24.3. Spinal Mechanisms of Fatigue	206
24.4. Supraspinal Mechanisms of Fatigue	206
24.5. Adaptive Changes During Fatigue	206
24.6. Abnormal Fatigue	207
World-IV Problems	209
World-IV Recommended Readings	209
WORLD V: DISORDERS	211
Chapter 25: Spasticity	213
25.1. Challenges of Clinical Studies	213
25.2. Spinal Cord Injury	213
25.3. Signs and Symptoms of Spasticity	214
25.4. Treatment of Spasticity	217
25.5. Multiple Sclerosis	220
Chapter 26: Parkinson's Disease and Dystonia	221
26.1. Clinical Features of Parkinson's Disease	221
26.2. Voluntary Movements in Parkinson's Disease	223
26.3. Differences in Anticipatory Adjustments and in Preprogrammed Reactions	224
26.4. Changes in Segmental Reflexes	226
26.5. Possible Mechanisms	226
26.6. Dystonia	226
Chapter 27: Implications for Motor Rehabilitation	229
27.1. Sources of Variability of Voluntary Movements	229
27.2. Changes in the Central Nervous System Priorities	230
27.3. Central Nervous System Plasticity	232
27.4. Adaptive Changes in Motor Patterns of Atypical Individuals	232
27.5. Amputation	233
27.6. Down Syndrome	233
27.7. Practical Considerations	236
World-V Problems	237
World-V Recommended Readings	237
Laboratories	239
Introduction	239
Laboratory 1	241
Laboratory 2	244
Laboratory 3	246
Laboratory 4	249
Laboratory 5	251
Laboratory 6	254
Glossary	256
Index	263
About the Author	269
