List of tables	vi
List of figures	xi
Preface	xiii
1 Data analysis and the research process	1
2 Analysing data with computers: first steps with SPSS and SPSS/PC+	17
3 Analysing data with computers: further steps with SPSS and SPSS/PC+	44
4 Concepts and their measurement	62
5 Summarizing data	76
6 Sampling and statistical significance	99
7 Bivariate analysis: exploring differences between scores on two variables	115
8 Bivariate analysis: exploring relationships	152
9 Multivariate analysis: exploring differences among three or more variables	191
10 Multivariate analysis: exploring relationships among three or more variables	218
11 Aggregating variables: exploratory factor analysis	256
Appendix: SPSS For Windows (Release 6.0)	270
Answers to exercises	276
Bibliography	286
Index	289

Tables

1.1	Data on television violence and aggression	9
2.1	The Job-Survey data	22
2.2	The SPSS names and location of the Job-Survey variables	26
2.3	Segment of SPSS/PC+ data list table	30
2.4	First error message when column number on SPSS data list command is incorrect	35
3.1	Frequencies SPSS/PC+ output with and without variable and value labels (Job Survey)	60
4.1	Types of variable	68
5.1	The faculty membership of fifty-six students (imaginary data)	78
5.2	Frequency table for data on faculty membership	78
5.3	Frequency table for income data (Job-Survey data)	80
5.4	Frequency table and histogram for income data (SPSS output)	83
5.5	Numbers of undergraduates in universities in the UK, 1980–1	86
5.6	Results of a test of mathematical ability for the students of two teachers (imaginary data)	87
5.7	Probable mathematics marks (from data in Table 5.6)	97
6.1	Devising a stratified random sample: non-manual employees in a firm	103
6.2	The four possible outcomes of tossing a coin twice	106
6.3	Theoretical outcomes of tossing a coin six times and the probabilities of similar outcomes	108
6.4	Type I and Type II errors	113
7.1	Tests of differences for two variables	119
7.2	Binomial test comparing proportion of men and women (Job-Survey SPSS/PC+ output)	121
7.3	Binomial test comparing proportion of whites and non-whites (Job-Survey SPSS/PC+ output)	121
7.4	One-sample chi-square test comparing number of people in ethnic groups (Job-Survey SPSS/PC+ output)	123
7.5	Chi-square test with insufficient cases (Job-Survey SPSS/PC+ output)	124

7.6	Chi-square test produced by crosstabs comparing number of white and non-white men and women (Job-Survey SPSS/PC+ output)	125
7.7	The Panel-Study data	127
7.8	McNemar test comparing attendance across two months (Panel-Study SPSS/PC+ output)	127
7.9	Cochran Q test comparing attendance across three months (Panel-Study SPSS/PC+ output)	128
7.10	One-sample Kolmogorov–Smirnov test comparing distribution of quality (Job-Survey SPSS/PC+ output)	129
7.11	Two-sample Kolmogorov–Smirnov test comparing distribution of quality in men and women (Job-Survey SPSS/PC+ output)	129
7.12	Median test comparing quality in men and women (Job-Survey SPSS/PC+ output)	130
7.13	Mann–Whitney test comparing quality in men and women (Job-Survey SPSS/PC+ output)	131
7.14	Kruskal–Wallis test comparing quality between ethnic groups (Job-Survey SPSS/PC+ output)	132
7.15	Sign test comparing quality across two months (Panel-Study SPSS/PC+ output)	133
7.16	Wilcoxon matched-pairs signed-ranks test comparing quality across two months (Panel-Study SPSS/PC+ output)	134
7.17	Friedman test comparing quality across three months (Panel-Study SPSS/PC+ output)	135
7.18	Unrelated t test comparing job satisfaction in men and women (Job-Survey SPSS/PC+ output)	138
7.19	Mann–Whitney test comparing job satisfaction in men and women (Job-Survey SPSS/PC+ output)	139
7.20	A oneway analysis-of-variance table (Job-Survey SPSS/PC+ output)	141
7.21	Descriptive group statistics with oneway analysis of variance comparing job satisfaction across ethnic groups (Job Survey SPSS/PC+ output)	142
7.22	Statistics provided by a oneway contrast comparing job satisfaction in groups 1 and 2 (Job-Survey SPSS/PC+ output)	142
7.23	Statistics provided by a oneway Scheffé test comparing satisfaction across ethnic groups (Job-Survey SPSS/PC+ output)	143
7.24	Homogeneity of variance tests given by oneway (Job-Survey SPSS/PC+ output)	144
7.25	Related t test comparing satisfaction across months (Panel-Study SPSS/PC+ output)	146

7.26	Repeated-measures means and standard deviations for job satisfaction (Panel-Study SPSS/PC+ output)	148
7.27	Repeated-measures multivariate tests (Panel-Study SPSS/PC+ output)	148
7.28	Repeated-measures univariate tests of significance for transformed variables (Panel-Study SPSS/PC+ output)	148
7.29	Repeated-measures averaged test of significance (Panel-Study SPSS/PC+ output)	149
8.1	Data for thirty individuals on job satisfaction and absenteeism	154
8.2	Four possible combinations	156
8.3	The relationship between job satisfaction and absenteeism	156
8.4	Two types of relationship	157
8.5	Contingency table for rated skill by gender (SPSS output from Job-Survey data)	158
8.6	Rated skill by gender (Job-Survey data)	163
8.7	Data on age, income, and political liberalism	166
8.8	Matrix of Pearson product-moment correlation coefficients (SPSS output from Job-Survey data)	174
8.9	Matrix of Spearman's rho and Kendall's tau correlation coefficients (SPSS output from Job-Survey data)	177
8.10	Sample means SPSS output (Job-Survey data)	181
8.11	The impact of outliers: the relationship between size of firm and number of specialist functions (imaginary data)	188
9.1	The Depression-Project data	200
9.2	Means and standard deviations of post-test depression in the three treatments for men and women (Depression-Project SPSS/PC+ output)	202
9.3	Tests of significance for main and interaction effects of a factorial design (Depression-Project SPSS/PC+ output)	203
9.4	Tests of significance for specified contrasts (Depression-Project SPSS/PC+ output)	204
9.5	Tests of significance for effects on pre-test depression (Depression-Project SPSS/PC+ output)	205
9.6	Test of homogeneity of slope of regression line within cells (Depression-Project SPSS/PC+ output)	207
9.7	Significance of the relationship between the covariate and post-test depression (Depression-Project SPSS/PC+ output)	207
9.8	Analysis-of-covariance table (Depression-Project SPSS/PC+ output)	208
9.9	Observed and adjusted means of post-test depression in the three treatments (Depression-Project SPSS/PC+ output)	208
9.10	Box's <i>M</i> test (Depression-Project SPSS/PC+ output)	209
9.11	Bartlett's test of sphericity (Depression-Project SPSS/PC+ output)	209

9.12	Multivariate tests of significance for the treatment effect (Depression-Project SPSS/PC+ output)	210
9.13	Univariate tests of significance for the two dependent measures (Depression-Project SPSS/PC+ output)	211
9.14	The second renamed transformed variable (Depression-Project SPSS/PC+ output)	211
9.15	Test of significance for treatment (Depression-Project SPSS/PC+ output)	211
9.16	Tests of significance for the within-subject 'time' effect (Depression-Project SPSS/PC+ output)	213
9.17	Means and standard deviations of pre-test and post-test depression for the three treatments (Depression-Project SPSS/PC+ output)	213
9.18	Relationship between the covariate age and the two transformed variables (Depression-Project SPSS/PC+ output)	214
9.19	The renamed and transformed within-subject effect for time (Depression-Project SPSS/PC+ output)	214
9.20	Multivariate tests for the interaction between treatment, gender, and time (Depression-Project SPSS/PC+ output)	214
9.21	Univariate tests for the interaction effect between treatment, gender, and time (Depression-Project SPSS/PC+ output)	215
9.22	Group means of job satisfaction (Job-Survey SPSS/PC+ output)	215
9.23	Analysis-of-covariance table (Job-Survey SPSS/PC+ output)	216
10.1	Relationship between work variety and job satisfaction (imaginary data)	221
10.2	A spurious relationship: the relationship between work variety and job satisfaction, controlling for size of firm (imaginary data)	223
10.3	A non-spurious relationship: the relationship between work variety and job satisfaction, controlling for size of firm (imaginary data)	224
10.4	An intervening variable: the relationship between work variety and job satisfaction, controlling for interest in work (imaginary data)	227
10.5	A moderated relationship: the relationship between work variety and job satisfaction, controlling for gender (imaginary data)	228
10.6	Two independent variables: the relationship between work variety and job satisfaction, controlling for participation at work (imaginary data)	231
10.7	Income, age, and support for the market economy (imaginary data)	235

10.8	Comparison of unstandardized and standardized regression coefficients with satis as the dependent variable	240
10.9	Creation of a dummy variable (ethnicgp)	244
10.10	Sample multiple-regression SPSS output (Job-Survey data)	246–7
10E.1	The relationship between approval of equal-pay legislation and gender	254
10E.2	The relationship between approval of equal-pay legislation and gender holding age constant	254
11.1	Correlation and significance-level matrices for items (Job-Survey SPSS/PC+ output)	260
11.2	Initial principal components and their variance (Job-Survey SPSS/PC+ output)	262
11.3	Initial principal axes and their variance (Job-Survey SPSS/PC+ output)	262
11.4	Item loadings on first two principal components (Job-Survey SPSS/PC+ output)	264
11.5	Item loadings on first two principal axes (Job-Survey SPSS/PC+ output)	266
11.6	Item loadings on orthogonally rotated factors (Job-Survey SPSS/PC+ output)	266
11.7	Item loadings on obliquely rotated factors (Job-Survey SPSS/PC+ output)	268
11.8	Correlations between oblique factors (Job-Survey SPSS/PC+ output)	268

Figures

1.1	The research process	3
1.2	A spurious relationship	10
1.3	An experiment	12
1.4	Three types of experimental design	13
1.5	A relationship between two variables	14
1.6	Is the relationship spurious?	14
1.7	Two possible causal interpretations of a relationship	15
4.1	Concepts, dimensions, and measurement	71
5.1	Bar chart of data on faculty membership	80
5.2	Histogram for income data (Job-Survey data)	81
5.3	The inter-quartile range	88
5.4	Stem and leaf diagram on undergraduates in the UK	91
5.5	Box and whisker plot	92
5.6	Box and whisker plot of undergraduates in the UK	93
5.7	Two normal distributions	94
5.8	The normal distribution and the mean	95
5.9	Properties of the normal distribution	96
5.10	Positively and negatively skewed distributions	97
6.1	The distribution of similar theoretical outcomes of tossing a coin twice	107
6.2	The distribution of similar theoretical outcomes of tossing a coin six times	109
6.3	The one-tailed and two-tailed 5 per cent levels of significance	112
7.1	A comparison of the distribution of the standard error of the differences in means for related and unrelated samples	145
8.1	Scatter diagram: political liberalism by income (SPSS/PC+ plot)	167
8.2	Scatter diagram: income by age (SPSS/PC+ plot)	168
8.3	A perfect relationship	169
8.4	No relationship (or virtually no relationship)	169
8.5	Three curvilinear relationships	170

8.6	Two positive relationships	170
8.7	Two negative relationships	171
8.8	The strength and direction of correlation coefficients	172
8.9	Types of relationship	173
8.10	A line of best fit	182
8.11	Regression: a negative relationship	183
8.12	Regression: a negative intercept	184
8.13	Regression: a perfect relationship	185
8.14	The accuracy of the line of best fit	185
8.15	Scatter diagrams for two identical levels of correlation	186
8.16	Heteroscedasticity	187
9.1	An example of an interaction between two variables	192
9.2	Examples of other interactions	194
9.3	Examples of no interactions	195
9.4	Schematic representation of a significant oneway effect	196
10.1	Is the relationship between work variety and job satisfaction spurious?	221
10.2	Is the relationship between work variety and job satisfaction affected by an intervening variable?	225
10.3	Is the relationship between work variety and job satisfaction moderated by gender?	229
10.4	Work variety and participation at work	230
10.5	The effects of controlling for a test variable	234
10.6	Path diagram for satis	249
10.7	Path diagram for satis with path coefficients	252
10.8	Path diagram for absence	252
11.1	Common and unique variance	261
11.2	Scree test of eigenvalues (Job-Survey SPSS/PC+ output)	263
