## Prologue

Category-Specific Disorders for Nouns and Verbs: A Very Old and Very New Problem	3
--	---

*Guido Gainotti*

Advances in Neurolinguistic Research	13
--------------------------------------	----

*Harold Goodglass*

Cerebral Substrate of Language: Ontogenesis, Senescence, Aphasia, and Recoveries	17
--	----

*André-Roch Lecours and Martine Simard*

## PART I History of Neurolinguistics

### 1. Neurolinguistics from the Middle Ages to the Pre-Modern Era: Historical Vignettes

*Harry A. Whitaker*

1-1. Medieval and Renaissance Neurolinguistics	27
1-2. A Period of Transition: The 17th and 18th Centuries	29
1-3. Localization Comes of Age: Franz Joseph Gall and His Times	32
1-4. Phrenology Studies Language Scientifically: Alexander Hood's Phenomenal Case Studies	34
1-5. From Gall to Broca: The Contribution of Jean Baptiste Bouillaud	38
1-6. From Gall to Broca: Day-to-Day Medical Work	41

1-7. Diagramming and Localizing in the Late 19th Century	43
1-8. Introducing the Concept of Receptive Aphasia: Theodor Meynert	45
1-9. Localizing and Diagramming: Henry Charlton Bastian	47
1-10. Early Agrammatism Research: Jackson, Pick, Head, and Weisenburg and McBride	49
1-11. Sources for the History of Neurolinguistics	53

## Clinical and Experimental Methods in Neurolinguistics

### 2. Methodological and Statistical Considerations in Cognitive Neurolinguistics

*Klaus Willmes*

2-1. Research Phases in Neurolinguistics	58
2-2. The Cognitive Neurolinguistics Research Program	60
2-3. Psychometric Considerations	62
2-4. Inferential Statistical Tests for Single-Case Studies	66
2-5. Future Outlook	70

### 3. Clinical Assessment Strategies: Evaluation of Language Comprehension and Production by Formal Test Batteries

*Jean Neils-Strunjaš*

3-1. Why Use Formal Tests of Language?	72
3-2. An Academic-Experimental Rationale for Testing	72
3-3. A Patient-Centered Rationale	73
3-4. Review of Tests	77
3-5. Summary and Future Outlook	82

### 4. Research Strategies: Psychological and Psycholinguistic Methods in Neurolinguistics

*Chris Westbury*

4-1. What Is Language?	84
4-2. Origins of the Neurolinguistic Model	86
4-3. Methods	87
4-4. Conclusion	93

<b>5. Event-Related Potential (ERP) Research in Neurolinguistics: Part I: Techniques and Applications to Lexical Access</b>	
<i>Sidney J. Segalowitz and H��l��ne Chevalier</i>	
5-1. Overview of the ERP Paradigm	96
5-2. Relations between ERPs and Language Behavior	99
5-3. Some Lexical Semantic Issues	101
5-4. The Content versus Function Word Distinction	102
5-5. Studies on Phonological Processing Using ERPs	106
5-6. Conclusions	108
<b>6. Event-Related Potential (ERP) Research in Neurolinguistics: Part II: Language Processing and Acquisition</b>	
<i>Sidney J. Segalowitz and H��l��ne Chevalier</i>	
6-1. Overview of the Issues	111
6-2. Divisions between Syntax and Semantics	112
6-3. Developmental Issues and Second Language Acquisition	119
6-4. Assessing Receptive Linguistic Competence without Behavioral Production	120
6-5. Some Questions about Reading	121
6-6. Conclusions	122
<b>7. Electrical Stimulation Mapping of Language Cortex</b>	
<i>Harry A. Whitaker</i>	
7-1. Techniques	126
7-2. Advantages and Disadvantages of Each Technique	126
7-3. Background: Early Findings	127
7-4. Modern Studies	127
7-5. Comparison with Other Mapping Techniques	128
7-6. General Results	128
7-7. Specific Results	129
<b>8. Tomographic Brain Imaging of Language Functions: Prospects for a New Brain/Language Model</b>	
<i>Jean-Fran��ois D��monet</i>	
8-1. Isotopic and Nonisotopic Tomographic Imaging: Physiological Background, Technical and Methodological Issues, and Their Implications for Cognitive Studies	132
8-2. The Activation Paradigm in Normal Subjects	135
8-3. Imaging Correlates of Language Functions in Damaged Brains	140
8-4. Conclusion	142

<b>9. Applications of Magnetoencephalography to Neurolinguistic Research</b>	
<i>Andrew C. Papanicolaou, Panagiotis G. Simos, and Luis F. H. Basile</i>	
9-1. Technical Aspects of Magnetoencephalography	144
9-2. Applications of Magnetoencephalography to the Study of Language	149
9-3. Conclusions	157
<b>10. Vertical Integration of Neurolinguistic Mechanisms</b>	
<i>Phan Luu and Don M. Tucker</i>	
10-1. Motility and Cortical Organization	160
10-2. Anatomy of Primate Communication	161
10-3. Motivational Basis of Hemispheric Specialization	163
10-4. Asymmetries in Corticolimbic Evolution	165
10-5. Adaptive Control of the Dual Pathways	166
10-6. Motility and Language	168
10-7. A Dual Route Involved in Language Regulation	169
10-8. Language Emergent across the Neuraxis	171
10-9. Conclusion	172
<b>11. Brain Lesion Analysis in Clinical Research</b>	
<i>Nina F. Dronkers and Carl A. Ludy</i>	
11-1. Methodological Issues in Lesion Analysis	174
11-2. Recent Findings in Lesion Analysis	181
11-3. Conclusion	186
<b>12. The Sodium Amytal (Wada) Test: Procedural and Interpretative Considerations</b>	
<i>Julie A. Fields and Alexander I. Tröster</i>	
12-1. A Brief Historical Note	189
12-2. Rationale Underlying the ISA Procedure	191
12-3. The ISA Procedure: A Sample Protocol	192
12-4. Problems and Considerations in ISA Protocol Administration and Interpretation	194
12-5. Recent Developments Aimed at Improving ISA Validity and Reliability	197
12-6. A Cautionary Note Concerning the ISA in Pediatric Populations	199

## PART III Experimental Neurolinguistics

### A. Levels of Language Representation and Processing: Linguistic and Psychological Aspects

#### 13. Phonetics and Phonology

*Jackson T. Gandour*

13-1. Speech Production	208
13-2. Speech Perception	216
13-3. Conclusion	218

#### 14. The Breakdown of Morphology in Aphasia: A Cross-Language Perspective

*Gonia Jarema*

14-1. Morphological Impairments in Sentence Processing	222
14-2. Morphological Impairments in Single-Word Processing	229
14-3. Concluding Remarks	233

#### 15. The Shadows of Lexical Meaning in Patients with Semantic Impairments

*Peter Hagoort*

15-1. Semantic Impairments	236
15-2. The Concreteness Effect	239
15-3. Impairments of Perceptual versus Functional Information	240
15-4. Multiple Semantic Systems?	242
15-5. Impaired Access versus Loss of Semantic Knowledge	243
15-6. Concluding Remarks	247

#### 16. Disorders of Syntax in Aphasia: Linguistic-Descriptive and Processing Approaches

*Herman Kolk*

16-1. Sentence Comprehension: The Linguistic-Descriptive Approach	250
16-2. Sentence Comprehension: The Processing Approach	252
16-3. Sentence Production: Three Performance Parameters	255
16-4. Agrammatic Production: The Linguistic-Descriptive Approach	256
16-5. Agrammatic Production: The Processing Approach	258
16-6. Conclusion	260

<b>17. Impairments of Discourse-Level Representations and Processes</b>	
<i>Yves Chantraine, Yves Joanette, and Dominique Cardebat</i>	
17-1. Theoretical Frameworks of Narrative and Conversational Discourse	262
17-2. Discourse Impairments in Brain-Damaged Individuals	267
17-3. Conclusion	273
<b>18. Attention as a Psychological Entity and Its Effects on Language and Communication</b>	
<i>Zohar Eviatar</i>	
18-1. Methodology	276
18-2. The Structure and Functions of the Attention Faculty	277
18-3. Language and Attentional Disorders	283
18-4. Conclusion	287
<b>19. The Role of Working Memory in Language and Communication Disorders</b>	
<i>Martial Van der Linden and Martine Poncelet</i>	
19-1. Working Memory and Sentence Comprehension	290
19-2. Working Memory and Speech Production Deficits	298
19-3. Working Memory and Vocabulary Acquisition	298
19-4. Conclusion	299
<b>20. The Influence of Emotion on Language and Communication Disorders</b>	
<i>Diana Van Lancker and Nancy A. Pachana</i>	
20-1. Some Definitions	302
20-2. Human Emotional Experience	303
20-3. Language, Thought, and Emotion—The Triad	303
20-4. Does Language Express Emotions?	304
20-5. Role of Brain Damage in Emotional Aspects of Language and Communication	306
20-6. Conclusions	310
<b>21. The Processing of Sign Language: Evidence from Aphasia</b>	
<i>David Corina</i>	
21-1. ASL and the Deaf Community	314
21-2. Linguistic Structure of American Sign Language	314

21-3. A Summary of Sign Language Aphasia	317
21-4. Hemispheric Specialization in Deaf Signers	317
21-5. Neurolinguistics of Sign Language Aphasia	320
21-6. Within-Hemisphere Localization	323
21-7. Right Hemisphere and Language	326
21-8. ASL and Syntax in Right- and Left- Hemisphere-Damaged Signers	327
21-9. Apraxia and Sign Language	328
21-10. Conclusion	329
<b>22. Levels of Representation in Number Processing</b>	
<i>Stanislas Dehaene and Laurent Cohen</i>	
22-1. The Quantity Representation	332
22-2. McCloskey's Model	333
22-3. Some Problematic Cases	336
22-4. The Triple-Code Model	337
22-5. Some Open Issues in Number Processing	340
<b>23. Computational Models of Normal and Impaired Language in the Brain</b>	
<i>Anthony E. Harris and Steven L. Small</i>	
23-1. Neural Network Models	345
23-2. Hard-Wired Networks	348
23-3. Supervised Learning Networks	351
23-4. Unsupervised Learning Networks	354
23-5. Summary	354
<i>B. Lateralization of Language and communication</i>	
<b>24. Brain Lateralization across the Life Span</b>	
<i>Merrill Hiscock</i>	
24-1. Evidence Regarding Developmental Changes	358
24-2. Evidence Regarding Changes Associated with Aging	363
24-3. The Major Issues	365
24-4. Conclusions	366
24-5. Future Outlook	368

## 25. Language in the Right Hemisphere Following Callosal Disconnection

*Eran Zaidel*

25-1. Disconnection Syndrome	370
25-2. Synopsis of Earlier Findings	370
25-3. Word Recognition in the Right Hemisphere	371
25-4. Interhemispheric Relations	377
25-5. Relation of Language in the Right Hemisphere to Acquired Alexia	379
25-6. Conclusions	383

## 26. The Right Hemisphere and Recovery from Aphasia

*Marcel Kinsbourne*

26-1. Language Lateralization	386
26-2. The Left-to-Right Transfer Hypothesis	387
26-3. Bilateral Lesion Effects	387
26-4. Laterality in Aphasia	389
26-5. Degree of Language Compensation	390
26-6. Mechanism of Transfer	390
26-7. Implications of Right-Hemisphere Compensation	391
26-8. Concluding Comments	392

## 27. Anatomical Asymmetries in Language-Related Cortex and Their Relation to Callosal Function

*Francisco Aboitiz and Andrés Ide*

27-1. Anatomical Asymmetry in Perisylvian Regions	394
27-2. The Corpus Callosum	398
27-3. Relation of Callosal Structure and Brain Asymmetry: Implications for Language Lateralization	401
27-4. Developmental and Evolutionary Aspects	402
27-5. Summary and Conclusion	404

## 28. Unity of Language and Communication: Interhemispheric Interaction in the Lateralized Brain

*Joseph B. Hellige*

28-1. Examples of Hemispheric Superiority	406
28-2. Why Is Hemispheric Superiority Complementary?	408
28-3. Mechanisms of Interhemispheric Collaboration	410
28-4. Future Outlook	413

## PART IV Clinical Neurolinguistics

### A. *Language and Communication in Special Populations and in Various Disease Processes*

#### 29. Language and Communication in Multilinguals

*Michel Paradis*

- |  |     |
|--|-----|
| 29-1. Recovery Patterns  | 418 |
| 29-2. Lateralization   | 421 |
| 29-3. Bilingual versus Unilingual Representation and Processing                              | 422 |
| 29-4. Future Directions in the Neuropsychology of Bilingualism:<br>The Need for Distinctions | 424 |
| 29-5. Conclusions  | 429 |

#### 30. The Role of Subcortical Structures in Linguistic Processes: Recent Developments

*Bruce Crosson and Stephen E. Nadeau*

- |   |     |
|---|-----|
| 30-1. Role of the Basal Ganglia in Language | 432 |
| 30-2. The Role of the Thalamus in Language  | 436 |
| 30-3. Conclusions                           | 444 |

#### 31. Language and Communication in Non-Alzheimer's Dementias

*Monique M. Cherrier, Mario F. Mendez, Jeffrey L. Cummings,  
and D. Frank Benson*

- |                                      |     |
|--------------------------------------|-----|
| 31-1. Vascular Dementia              | 448 |
| 31-2. Frontotemporal Dementias       | 451 |
| 31-3. Huntington's Disease           | 453 |
| 31-4. Progressive Supranuclear Palsy | 456 |
| 31-5. Creutzfeldt–Jakob Disease      | 458 |
| 31-6. Primary Progressive Aphasia    | 459 |
| 31-7. Summary and Conclusions        | 460 |

### 32. Language and Communication Disorders in Dementia of the Alzheimer Type

*Paulo Caramelli, Leticia Lessa Mansur, and Ricardo Nitrini*

32-1. Characterization of the Linguistic Changes in DAT	464
32-2. Evolution of the Linguistic Changes in DAT	469
32-3. Specificity of the Linguistic Changes	470
32-4. Influence of Non-Linguistic Deficits on Language Impairment	471
32-5. Language Impairment in DAT: A Marker for Clinical Subgroups	472
32-6. Neuropathological Correlates of Linguistic Changes	472
32-7. Conclusions	473

### 33. Language Impairment in Parkinson's Disease

*Henri Cohen*

33-1. Statement of the Problem	476
33-2. Language Deficits in PD	477
33-3. Conclusion	482

### 34. Communication and Language Disturbances Following Traumatic Brain Injury

*Skye McDonald*

34-1. Discourse Analysis	487
34-2. Pragmatic Analysis	489
34-3. Conversational Analysis	490
34-4. Explanations for Communication Disturbances in TBI	491
34-5. Conclusions	494

### 35. Language Abnormalities in Psychosis: Evidence for the Interaction between Cognitive and Linguistic Mechanisms

*Joseph I. Tracy*

35-1. Major Research Perspectives	496
35-2. Patterns in Language/Communication Research	499
35-3. Cognitive Explanations of Language/ Communication Abnormalities	501
35-4. An Integrated Cognitive/Neurolinguistic Approach	503
35-5. Future Outlook	504

## *B. Language and Communication in Developmental Disorders*

### **36. Landau–Kleffner Syndrome: Clinical and Linguistic Aspects**

*Gianfranco Denes*

36-1. Clinical Picture	508
36-2. Prognosis and Treatment	510
36-3. Description of Linguistic Impairment	511
36-4. Hypothesis on the Underlying Deficits	512
36-5. Conclusion	514

### **37. The Development of Language in Some Neurological Diseases**

*Shirin Sarkari, Arlene A. Tan, and Dennis L. Molfese*

37-1. Down's Syndrome	516
37-2. Williams Syndrome	518
37-3. Turner Syndrome	520
37-4. Persistent Hyperinsulinemic Hypoglycemia in Infancy	521
37-5. Sturge–Weber Syndrome	522
37-6. Poroencephaly	523
37-7. Conclusion	523

### **38. Language and Communication Disorders in Autism and Asperger's Syndrome**

*Francesca Happé*

38-1. Language and Communication	526
38-2. Autistic Language and Communication	526
38-3. Cognitive Theories: Understanding the Mind in Autism	528
38-4. The Theory of Mind Hypothesis	529
38-5. Developmental Effects of Mentalizing Deficits	530
38-6. Relationship of Language to Theory of Mind	532
38-7. Asperger's Syndrome	532
38-8. Conclusions and Future Outlook	533

## *C. Recovery from and Rehabilitation of Language and Communication Disorders*

### **39. Spontaneous Recovery from Aphasia**

*Stefano F. Cappa*

X	39-1. Clinical Studies of Spontaneous Recovery	536
	39-2. The Neurological Basis of Recovery	541
	39-3. Conclusions	544

## 40. Recovery from Language Disorders: Interactions between Brain and Rehabilitation

*Leo Blomert*

40-1. The Cognitive Neuropsychological Approach to Recovery	548
40-2. Restoration and Substitution of Function	549
40-3. Neuroplasticity and Recovery	550
40-4. Neuroplasticity and Learning	550
40-5. Limits to Neuroplasticity and Recovery	551
40-6. Neurochemical Thresholds and Cognitive Processing Limitations	552
40-7. The Intricate Relation of Language Rehabilitation and Brain Repair	553
40-8. Can Syntax Be (Re)Learned?	555
40-9. Conclusions	556

## 41. Recovery and Treatment of Acquired Reading and Spelling Disorders

*Nadine Martin*

41-1. Pathways to Reading	560
41-2. Reading Disorders	560
41-3. Deep Dyslexia	562
41-4. Pathways to Spelling	563
41-5. Spelling Disorders	564
41-6. Studies of Recovery and Treatment	565
41-7. Summary and Indications for Future Research	571

## 42. Neurolinguistic Issues in the Treatment of Childhood Literacy Disorders

*Philip H. K. Seymour*

42-1. Causal Architecture	574
42-2. Peripheralist Hypotheses	576
42-3. Centralist Hypotheses	580
42-4. Orthographic Development	583
42-5. Conclusions	584

## 43. The Role of Computers in Aphasia Rehabilitation

*Volkbert M. Roth and Richard C. Katz*

43-1. Models of Aphasia	586
43-2. Limitations of Computers in Aphasia Therapy	586

43-3. Efficacy of Treatment Software	590
43-4. Conclusion	595

## **PART V Resources in Clinical and Experimental Neurolinguistics and Related Fields**

### **44. Computational Transcript Analysis and Language Disorders**

*Brian MacWhinney*

44-1. The Child Language Data Exchange (CHILDES) System	600
44-2. Five Methodological Periods	603
44-3. The Database	606
44-4. Chat	607
44-5. Clan	609
44-6. Conclusion	615

### **45. Neurolinguistic and Related Assessment and Rehabilitation Software: A Listing**

*Brigitte Stemmer and Brigitta Gahl*

45-1. Obtaining Information on Assessment and Rehabilitation Material	618
45-2. Software Programs	620

### **46. Neurolinguistic and Related Journal and Book Resources: A Listing**

*Brigitte Stemmer and Sieglinde Lacher*

46-1. Journals	642
46-2. Books	644
46-3. Sourcebooks	652

### **47. Neurolinguistic and Related Resources on the Internet: A Listing**

*Brigitte Stemmer and Manfred Hild*

47-1. Libraries and Bookstores	656
47-2. Publishers and Journals	658
47-3. Newsgroups and Mailing Lists	660
47-4. Other Useful URLs	664

**References**
