Series Preface vii

Tribute to Vsevolod L. Bianki ix

Introduction xi

Editorial Comment xiii

Chapter 1 Sexual Dimorphism of Interhemispheric Asymmetry in Humans 1

1.1 Anatomical studies of sexual dimorphism of the brain 1

1.2 Functional studies of sexual dimorphism of the brain 4

1.3 Sex hormones and interhemispheric asymmetry 10

1.4 Previous studies of sexual dimorphism of cerebral asymmetry in animals 15

1.5 Conclusion 16

Chapter 2 Behavioural Indices 19

2.1 Methodological notes 19

2.2 Vocalization 21

2.3 Pain sensitivity 28

2.4 Motor activity 32

2.5 Ontogenetic dynamics 34

2.6 Conditioned reflexes 39

2.7 Stereotyped and probabilistic behaviour 45

2.8 Differentiation of visual and sound stimuli 48

2.9 Invariant recognition of sound and visual stimuli 57

2.10 Intermodal and intramodal integration 66

2.11 Analysis of space and time stimuli 68

2.12 Discrimination of simultaneous and successive complexes 73

2.13 Discrimination of absolute and relative characteristics 79

2.14 Emotions 80

2.15 Noise-resistance 83

2.16 Conclusion 87

Chapter 3 Electrophysiological Characteristics **97**
3.1 Intrazonal callosal connections 97
3.2 Interzonal and transcallosal connections 108
3.3 Comparison of corresponding hemispheres between sexes 120
3.4 The dynamics of transcallosal response processing 126
3.5 Patterns of asymmetry 137
3.6 Penetrance and expression 143
3.7 Intrahemispheric contrast 147
3.8 Conclusion 153

Chapter 4 Hormonal Factors **155**
4.1 General characteristics 155
4.2 The influence of sex hormones upon interhemispheric asymmetry during the prenatal and neonatal period 156
4.3 The influence of sex hormones upon interhemispheric asymmetry in mature animals 165
4.4 The influence of cyclic changes in the level of sex hormones upon interhemispheric asymmetry 172
4.5 The influence of pregnancy upon interhemispheric asymmetry 176
4.6 Conclusion 180

Chapter 5 A Neurobiological Model of Sexual Dimorphism in the Brain (by Way of Conclusion) **185**

References **193**

Subject Index **207**
