<i>Acknowledgments</i>	xiii
Introduction	1
Anthropology and growth	2
Maya in Disneyland	3
Growth and evolution	6
Growth theory	9
Human auxology	14
The organization of this book	14
1 Background to the study of human growth	18
Why grow and develop?	18
Historical background for the study of human growth	19
2 Basic principles of human growth	54
Stages in the life cycle	54
Prenatal stages	55
Birth	58
Postnatal life	67
3 The evolution of human growth	98
Vertebrate and mammalian foundations for human growth	98
Mammalian growth	101
Mammalian reproduction	104
Brains and learning	110
Stages of mammalian growth	114
Primate growth patterns	123
Of brains and bodies	130
Is the human adolescent growth spurt unique?	131
Some important differences between human and non-human primate growth	146
A philosophy of human growth	149

4	Evolution of the human life cycle	153
	Life history and stages of the life cycle	154
	The evolution of ontogeny	155
	Neoteny and human evolution	158
	Hypermorphosis and human evolution	161
	Critiques of neoteny and hypermorphosis	164
	Mathematical evidence against heterochrony	169
	The other side of the coin	171
	Human childhood	173
	Weaning	173
	The passage from childhood and the mid-growth spurt	178
	How and when did human childhood evolve?	181
	Who benefits from childhood?	189
	Summary of childhood	200
	When and why did adolescence evolve?	201
	Why did the growth spurt evolve?	203
	Why do girls have adolescence, or why wait so long to have a baby?	209
	Why do boys have adolescence?	214
	Summary of adolescence	216
	The valuable grandmother, or could menopause evolve?	217
	Conclusion	223
5	Growth variation in living human populations	225
	Population differences in growth and development	225
	Population differences in rate of growth	228
	Differences in growth between boys and girls	232
	Population variation in skeletal, dental, and sexual maturation	235
	Hereditary and environmental interactions as the cause of population variation	239
	Body proportions	241
	Size versus shape	242
	Secular trends	243
	What do secular trends mean?	254
	Negative secular trends	255
	Population differences in body composition	258
	The significance of population variation	262
	Adaptive value of body size in human populations	263

6	Environmental factors influencing growth	268
	Nutrients and food	268
	Altitude	283
	Climate: effects on body size and shape	286
	Climate: effects on seasonal rates of growth	288
	Migration and urbanization	297
	Socioeconomic status	304
	Size and social mobility	324
7	Genetic and endocrine regulation of human growth	329
	Genetics of human development	330
	Endocrinology of growth	351
8	A biocultural view of human growth	387
	Biocultural interactions in contemporary populations	388
	Risks for grandparents	392
	Social, economic and political disturbances to human growth	392
	Stress, hormones, and human development	394
	The future	397
	<i>Glossary</i>	399
	<i>References</i>	409
	<i>Index</i>	442
