Summary of the Research Findings

Introduction

1.1	Background to the Research Project	9
1.2	The National Child Development Study	9
1.3	The Nature of the Project	9
1.4	Related Research on Young Persons in Local Labour Markets	10
1.5	Methods of Statistical analysis	12
1.6	Plan of the Research Report	12
		13

A Measure of Occupational Earnings

2.1	Actual Earnings versus Occupational Earnings	14
2.2	Constructing a Measure of Occupational Earnings	14
2.3	Summary	14
		19

Personal Characteristics, Educational Attainment, Parental Socio-Economic Background and Occupational Earnings

3.1	Ethnicity	20
3.2	Marital Status and Children	20
3.3	Family Structure	21
3.4	Parental Social Class	22
3.5	Age Father Left School	22
3.6	Educational Attainment	23
3.7	Health	23
3.8	Summary	25
		27

Work Histories and Occupational Earnings

4.1	Work Histories in NCDS4	28
4.2	Criteria for the Classification of Work Histories	28
4.3	A Classification of NCDS4 Work Histories	29
4.4	Defining the Date of First-completion of Full-time Education	29
4.5	Continuous Versus Non-continuous Work Histories	29
4.6	Work History Patterns	30
4.7	A Typology of Work Histories	31
4.8	Summary	32
		36

Local Labour Markets and Occupational Earnings

5.1	Methodology	37
5.2	A Classification of Travel-to-Work Areas	37
5.3	Geographical Mobility and Employment Decline	37
		38

5.4	Local Labour Markets, Work Histories and Occupational Earnings	38
5.5	Summary	42
6	Local Labour Market Influence on the School Leaving Decision, Work History and Occupational Earnings	44
6.1	A Review of the Influences on Occupational Earnings	44
6.2	Social Background, Mathematical and Reading Abilities	46
6.3	Social Background, Educational Ability and School Leaving Age	47
6.4	Geographical Mobility	47
6.5	Work Histories and Local Labour Market Influences	49
6.6	Occupational Earnings, Work Histories, Education and Social Background	51
6.7	Exploring the Statistical Relationships	51
6.8	Occupational Earnings and Gender	53
7	Conclusion	56
7.1	The Main Findings	56
7.2	Policy Implications	57
7.3	Directions for Further Research	58
	Appendix 1 The NCDS4 Diary	59
	Appendix 2 Work Histories, Job Changing and Unemployment	62
	Appendix 3 Means of the Variables used in Chapter 6	64
	References	65

List of Tables

<i>Table</i>	<i>Page</i>
2.1 Occupational earnings quartiles for males	18
2.2 Occupational earnings quartiles for females	18
3.1 Ethnic origin from NCDS2 and NCDS3	20
3.2 Occupational earnings and ethnic origin	21
3.3 Occupational earnings, marital status and the presence of children	21
3.4 Occupational earnings and birth order	23
3.5 Occupational earnings and father's social class	24
3.6 Occupational earnings and age father left school	24
3.7 Occupational earnings and English test score (age 16)	25
3.8 Occupational earnings and maths test score (age 16)	25
3.9 Occupational earnings and maths/reading test results	26
3.10 Occupational earnings, physical disability and behavioural problems	26
4.1 Age at which completed full-time education by gender	30
4.2 Continuity of employment since age at first-completion of full-time education by age at first-completion of full-time education and by gender	30
4.3 Continuously employed persons by age at first-completion of full-time education by number of Jobs	31
4.4 Non-continuously employed persons by age at first-completion of full-time education by number of unemployed periods and by gender	31
4.5 Non-continuously employed persons by age at first-completion of full-time education by number of educational periods after first-completion of full-time education and by gender	32
4.6 Persons with only one spell of unemployment, or only one spell 'out of the labour force', immediately after first-completion of full-time education, by duration of that spell	35
4.7 A classification of the work histories of NCDS4 respondents by age at first-completion of full-time education, for males and females	36
4.8 Percentage of each work history type in upper half of occupational earnings scale, by gender and age at first-completion of full-time education	36
5.1 Travel-to-work areas by unemployment rate groups, 1974 and 1981, June each year	38
5.2 Travel-to-work areas by employment change, 1974-81	38
5.3 NCDS respondents classified by employment change, 1974-81, by 1974 and 1981 travel-to-work areas, by gender	39
5.4 NCDS respondents by employment change (1974-81) in 1981 travel-to-work area by whether or not 1974 TTWA is same as 1981 TTWA and by gender	39
5.5 Sex-specific employment change (1974-81) in respondent's 1981 TTWA by work history type and by gender	42
5.6 Sex-specific unemployment rate category in respondent's 1981 TTWA by work history type and by gender	42
5.7 Occupational earnings by 1974-81 change in employment in 1981 travel-to-work area by gender	43
5.8 Occupational earnings by 1981 unemployment rate group in 1981 travel-to-work area by gender	43
6.1 The relationship between social background and mathematical ability at age 11 years (maximum likelihood estimates of logit model)	46
6.2 The relationship between social background and reading ability at age 11 years (maximum likelihood	46

	estimates of logit model)	47
6.3	The relationship between social background, mathematical and reading ability at age 11 years, local area unemployment and school leaving age (maximum likelihood estimates of logit model)	48
6.4	The relationship between social background, mathematical and reading ability at age 11 years, school leaving age, local area unemployment and geographical mobility (maximum likelihood estimates of logit model)	48
6.5	The relationship between social background, mathematical and reading ability at age 11 years, school leaving age, geographical mobility, local area unemployment and continuous employment (more than one job) (maximum likelihood estimates of logit model)	49
6.6	The relationship between social background, mathematical and reading ability at age 11 years, school leaving age, geographical mobility, local area unemployment and discontinuous Employment (maximum likelihood estimates of logit model)	50
6.7	The relationship between social background, mathematical and reading ability at age 11 years, school leaving age, geographical mobility, work history, local area unemployment and occupational earnings (maximum likelihood estimates of logit model)	52
6.8	Occupational earnings, social background, educational attainment, work history and location. The combined male/female analysis	54
