Introduction to the Series	ix
Acknowledgements	xi
Introduction	xiii
1 The structure of macroeconomic variables in national accounts	1
1.1 Description and analysis in macroeconomic modelling	1
1.2 Income and total output in national accounts	3
1.3 Industry and output classifications	9
1.4 The evaluation of transactions	11
1.5 Hypothesis on technology	16
1.6 Sectorization between SNA and ESA	18
1.7 The complete account system in matrix form	20
References	24
2 Output and capital structures in multisectoral dynamics	27
2.1 Equilibrium dynamics and multisectoral dynamics	27
2.2 A discussion of the <i>a priori</i> properties of dynamic systems	29
2.3 Fixed capital reproduction and final demand	36
2.4 Elementary paths constituting the systems' growth path and the associated capital structures	40
2.5 Identifying the capital structure stimulating the balanced growth path	46
References	61
3 Supply side: production chronologies	63
3.1 Dynamic interindustry interactions	63
3.2 Stages in the production process and intermediate demands	64
3.3 Forward and backward lag-type Leontief model relative stability and investment gestation lag	70
3.4 Loop transference in the time-lag domain	75
3.5 Time varying technical coefficients	77
References	86

4	The demand side and the dynamic macroeconomic equilibrium	87
4.1	Interaction among consumption goods and multisectoral accelerators	87
4.2	Demand habits and consumers' behaviour	89
4.3	Capital stock and investment demand	98
4.4	Final demand components and macroeconomic equilibrium	104
4.5	Determination of sectoral equilibria of the real economy	108
	References	115
5	Price side: duality versus interaction	117
5.1	Imputed price versus simulated price	117
5.2	Static and dynamic duality and dual instability	118
5.3	Duality and efficiency in real-price systems	120
5.4	Prices and value added	126
5.5	Modelling value added components: sectoral wages	129
5.6	Properties and simulation of the real and nominal side	134
	References	137
6	Scale and structure of macrovariables	139
6.1	A structural method for structural change	139
6.2	Multipliers and linkage analysis	140
6.3	The singular value decomposition of the Leontief inverse	145
6.4	Multiplier decomposition and structural change	156
	References	166
	Appendix Estimated Employment and Gross National Product Impacts of 1989 Tourism in Ireland by <i>E. W. Henry</i>	167
7	Scale dependent technologies	193
7.1	Returns to scale, joint products and dynamic equilibrium configurations	193
7.2	Fixed points in the one sector dynamic system with scale dependent input requirements (SDIR)	195
7.3	Cycles in the one-sector SDIR dynamic system	201
7.4	The impact of final demand on output	206
7.5	The multisectoral SDIR system, own and cross scale dependency	214
7.6	Simulations of a two-sector SDIR system	221
	References	228
