Preface ix

PART I: ANALYSIS OF VARIANCE AND MULTIPLE REGRESSION

1. Elements of the General Linear Model

Maurice Tatsuoka

3

Introduction 3

The Simplest Case of Two Groups: An Informal Treatment 4

The Two-Group Case: Formal Treatment 10

Matrix Formulation: Parameter Estimation 14

Matrix Formulation: Significance Testing 26

Higher-Order, Multivariate, and Covariance Designs 31

2. Pairwise Comparison Procedures for One-Way Analysis of Variance Designs

Rebecca Zwick

43

Type I Error and Power 43

Comparing the Empirical Type I Error Rates and Powers
of Competing MCPS 46

The Independent-Sample Case 47

One-Factor Repeated Measures Designs 64

Conclusions 67

3. Analyzing Means From Repeated Measures Data

Charles Lewis

73

The Current State of Affairs 75

Alternatives to Standard Repeated Measures Analysis of Variance 76

A Numerical Illustration 89

*4. A Balanced Approach to Unbalanced Designs		
<i>Gideon Keren</i>		95
Introduction	95	
Possible Sources of Unequal Designs	96	
The Regression Solution for the Balanced Design	97	
The Case of Unequal but Proportional Cell Frequencies	102	
Unequal Disproportionate Cell Frequencies	108	
Additional Considerations: Sample vs Population, Weighting and Coding	114	
Final Comments and a Brief Summary	120	
Appendix A: Construction and Proofs of a Coding System for the Case of Proportional N's Which Will Always Maintain Orthogonality	122	
5. MANOVA and MANCOVA: An Overview		
<i>Neil M. Timm</i>		129
Introduction	129	
Fundamentals: Full Rank Model	130	
Fundamentals: Less Than Full Rank Models	141	
Geometry: ANCOVA Model	149	
Fundamentals: Restricted Full Rank Model	154	
The Multivariate Linear Model: Estimation	157	
The Multivariate Linear Model: Hypothesis Testing	158	
MANOVA and MANCOVA: Some General Principles	161	
6. Set Correlation		
<i>Jacob Cohen</i>		165
Sets as Research Factors	165	
Partialling	166	
Canonical Analysis	167	
Elements of Set Correlation	168	
Hypothesis Testing, Estimation, and Statistical Power Testing the Null Hypothesis	174	
Computation	180	
Applications of Set Correlations	180	
Illustrative Examples	183	
A Hierarchical Analysis of a Quantitative Set and Its Unique Components	185	
PART II: BAYESIAN STATISTICS		
*7. Bayesian Statistics: An Overview		
<i>Robert L. Winkler</i>		201
Introduction	201	
Bayes' Theorem	203	
Assessment of Likelihood Functions and Prior Distributions	216	

Estimation and Hypothesis Testing	221
Prediction	225
Decision Making Under Uncertainty	228
Conclusions	229

*8. Bayesian Methods for the Analysis of Variance

<i>Charles Lewis</i>		233
Introduction	233	
Fixed Effect, Between Subject Designs	234	
Designs Having Repeated Measures	246	
Closing Remarks	254	

PART III: CATEGORICAL DATA AND THE ANALYSIS OF FREQUENCIES

9. Analysis of Categorical Data

<i>Stephen S. Brier</i>		259
Introduction	259	
Generation of Contingency Tables	260	
Formulation and Interpretation of Log-Linear Models	262	
Estimation of Parameters in Log-Linear Models	269	
Goodness of Fit Tests	277	
Analyzing Incomplete Tables	281	
Path Analysis in Contingency Tables	285	
Other Applications of the Methodology of Log-Linear Models	288	
Further Readings References	291	

10. On the Use and Misuse of Chi-Square

<i>Kevin L. Delucchi</i>		295
The Use of Chi-Square	296	
Supplementary and Alternative Procedures	304	
Conclusions	314	

11. Some Aspects of the Analysis of Categorical Data

<i>B. S. Everitt</i>		321
Introduction	321	
The 2×2 Contingency Table	322	
Correspondence Analysis	332	
Logistic Regression	334	
Case-Control Studies	338	
Latent Class Models	342	
Conclusions	345	

PART IV: OTHER TOPICS

12. Exploratory Data Analysis

<i>Albert F. Smith and Deborah A. Prentice</i>		349
Philosophy of Exploratory Data Analysis	353	
Nonparametric Procedures, Robust Statistics, and EDA	355	

Techniques for the Examination of a Sample Measured on One Variable	356	
Techniques for the Comparison of Several Samples Measures on One Variable	363	
The Analysis of the Relationship Between Two Ordered Variables	370	
Analysis of Two-Way Tables	379	
Conclusion	388	
13. Graphical Data Analysis		
<i>Howard Wainer and David Thissen</i>		391
Introduction	391	
History	393	
Graphics for Data Analysis	395	
Two-Way Displays of One-Way Data	399	
Two-Way Displays of Multivariate Data	424	
A Multivariate Example: The Worst American State Revisited	435	
Everything Else	445	
Conclusions	450	
14. Uses of Computers in Psychological Research		
<i>Russell M. Church</i>		459
Literature Search	460	
Experimental Design	462	
Experimental Control	462	
Data Acquisition	465	
Data Retention	465	
Data Analysis	466	
Development of Theory	468	
Comparison of Theory to Data	470	
Preparation of Manuscript	473	
Communication	473	
Conclusions and Speculations	474	
15. Computer Simulation: Some Remarks on Theory in Psychology		
<i>Geoffrey R. Loftus</i>		477
The Historical Approach	478	
Psychology and Cosmology	485	
Computer Simulation in the Social Sciences	487	
Should Computers Be Banned	488	
Conclusions	490	
16. Essentials in the Design and Analysis of Time-Series Experiments		
<i>Regina H. Rushe and John M. Gottman</i>		493
How to Design Time-Series Experiments	493	
How to Describe Time-Series Data	502	

How to Do a Time-Series Analysis	512
Recent Innovations in Time-Series Analysis	524
Resources for Time-Series Analysis	525
