Contents

Preface ix

PART I: MODELS AND MEASUREMENT

1. Mathematical Models in Psychology 3
William K. Estes
A Thumbnail History of Models in Psychology 4
On the Functions of Models 9
On Testing Models 11

2. Signal Detection Theory as Data Analysis Method and Psychological Decision Model 21
Neil A. Macmillan
Elements of SDT 22
Advantages of SDT 40
Assumptions of SDT 43
Conclusions 54

***3. What Is and Isn't Measurement** 59
Norman Cliff
"Myths" About Measurement 59
What Is Psychological Measurement 76
Conclusion 88

4. Multidimensional Scaling 95
Lawrence E. Jones and Laura M. Koehly
Overview 96
Basic Concepts 97

MDS Models 99
Research Design, Data Collection, and Interpretation 104
Schematic Faces Example 112
Specialized Methods 143
Problems and Prospects 153

5. **Can the Various Meanings of Probability Be Reconciled?** **165**
Glenn Shafer
An Agreement to Disagree 165
An Informal Description of the Ideal Picture 168
A Formalization of the Ideal Picture 172
The Diversity of Application 191

PART II: METHODOLOGICAL ISSUES

6. **Rational Appraisal of Psychological Research and the Good-Enough Principle** **199**
Ronald C. Serlin and Daniel K. Lapsley
Introduction 199
The Meehlian Indictment of Psychology 200
Slow Progress Reconsidered: A Historicist Approach 203
The Good-Enough Principle 208
Psychology and Physics Reconsidered 222
Conclusion 225

7. **The Theoretical Epistemology: A New Perspective on Some Long-Standing Methodological Issues in Psychology** **229**
Donald MacKay
Unsolved Methodological Issues 229
Current Attempts to Solve These Problems 232
The Two Epistemologies in General Overview 234
Methodology Under the Two Epistemologies 243
Why Previous Solutions Failed: The View from the Theoretical Epistemology 248
A New Perspective on Methodological Issues 249
Conclusion 252

8. **Between- or Within-Subjects Design: A Methodological Dilemma** **257**
Gideon Keren
Statistical Aspects 258
Methodological Issues 260
External Validity and Theoretical Framework 264
Direct Comparisons of Between- Versus Within-Subjects Designs 268
Conclusions 271

9. **Which Comes First, Cause or Effect?** 273
Paul W. Holland
The Cause of An Effect Versus the Effect of a Cause 273
Rubin's Model 274
Beyond Experiments 277
What About Path Analysis? 280

10. **R. A. Fisher's Philosophical Approach to Inductive Inference** 283
Nancy Brenner-Golomb
A Short Biography 283
Evolution, Eugenics, and Genetics—Cambridge 284
Change and Determinism 287
Mathematics and Induction 292
Mathematical Statistics 297
The Design of Experiments—Rothampsted 301
A Concluding Remark 304

PART III: INTUITIVE STATISTICS

11. **The Superego, the Ego, and the Id in Statistical Reasoning** 311
Gerd Gigerenzer
The Inference Revolution 311
The Offspring: Hybrid Logic 322
Beyond Dogmatism: Toward a Thoughtful Use of Statistics 332
Epilogue: More Superegos 333
Conclusions 335

12. **Belief in the Law of Small Numbers** 341
Amos Tversky and Daniel Kahneman

13. **Statistical Prediction Versus Clinical Prediction: Improving What Works** 351
Robyn M. Dawes, David Faust, and Paul E. Meehl
The Research 352
The Framework 354
Characteristics of the Problem 358
Objections to the Results 360
Implementation 362

14. **The Perception of Randomness** 369
Maya Bar-Hillel and Willem A. Wagenaar
Why Study the Perception of Randomness? 369
How? 382
Why? 388

15. On Generating Random Sequences
Peter J. Pashley **395**
Introduction 395
What Are Random Sequences? 396
Features of Random Number Generators 399
Some Classes of Random Number Generators 401
Distributions of Random Numbers 404
Checking Randomness 405
Recommendations 409

PART IV: HYPOTHESIS TESTING, POWER, AND EFFECT SIZE

16. Consequences of Prejudice Against the Null Hypothesis
Anthony G. Greenwald **419**
The Lowly Null Hypothesis 419
Refutations of Null Hypothesis "Cultural Truisms" 420
Behavioral Syptoms of Anti-Null-Hypothesis Prejudice 421
A Survey to Estimate Bias Against the Null Hypothesis 422
A Model of the Research-Publication System 425
Model Description 426
Limitations of the Model 430
A Check on the Model's Accuracy 434
Toward a More Satisfactory System 435
System Effect on Generality of Research Findings 435
Some Epidemics of Type I Error 437
Attitude and Selective Learning 437
The Sleeper Effect 438
Quasi-Sensory Communication 439
Rational Strategies Regarding the Null Hypothesis 440
How to Accept the Null Hypothesis Gracefully 442
Conclusions 446

17. How Significant Is "Significance"?
Paul Pollard **449**
The Probability of a Type I Error 450
Confusion Between the Prior and Posterior Probabilities 453
Sources of Confusion: Statistics Teaching 454
Sources of Confusion: Inferential Fallacies 455
Can We Determine the Posterior Probability of a Type I Error 457
Implications 458

18. Effect Size
Maurice Tatsuoka **461**
Other Traditional Measures of Effect Size 463
Some Recently Developed Measures of Effect Size 470

Multivariate Extensions of Effect Size 474
Concluding Remarks 478

19. The Relative Power of Parametric and Nonparametric Statistical Methods **481**
Donald W. Zimmerman and Bruno D. Zumbo
Classical Studies of Parametric Tests Under Violation of Assumptions 482
Power Superiority of Nonparametric Tests for Heavy-Tailed Distributions 483
Outlier-Prone and Outlier-Resistant Distributions 486
Computer Simulation Method 490
Further Evidence That Outlier Influence Relative Power of Parametric and Nonparametric Tests 492
Bounded Transformations That Are Not Ranks 495
Transformations That Do Not Preserve Order 501
Rank Transformations and Unequal Variances 504
Transformations, Scales of Measurement, and Appropriate Statistics 511

20. Cumulating Evidence **519**
Robert Rosenthal
Defining Results of Individual Studies 520
Effect Size and Statistical Significance 521
A Framework for Meta-Analytic Procedures 523
Comparing Two Studies 525
Combining Two Studies 527
Comparing Three or More Studies: Diffuse Tests 529
Comparing Three or More Studies: Focused Tests (Contrasts) 530
Combining Three or More Studies 533
Comparing and Combining Results That Are Not Independent 535
The File Drawer Problem 535
The Evaluation of Effect Sizes 538
The Concept of Successful Replication 541
Pseudo-Failures to Replicate 542
Successful Replication of Type II Error 544
Some Metrics of the Success of Replication 546
Contrasting Views of Replication 544
What Should Be Reported? 552

AUTHOR INDEX 561

SUBJECT INDEX 573
