<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Mathematical Background to Dynamic Optimization</b>	<b>5</b>
2.1	Introduction . . . . .	5
2.2	Analytical approach to the optimization problem . . . . .	5
2.2.1	Problem formulation . . . . .	5
2.2.2	Solving through path coupling . . . . .	9
2.3	Numerical approach to the optimization problem . . . . .	10
2.3.1	Discretization . . . . .	11
2.3.2	Method 1 . . . . .	12
2.3.3	Method 2 . . . . .	14
2.4	Economic interpretation of the adjoint variables . . . . .	15
2.5	General procedure . . . . .	16
<b>3</b>	<b>The Basic Model</b>	<b>17</b>
3.1	Introduction . . . . .	17
3.2	The model and its assumptions . . . . .	17
3.3	Examination of the paths . . . . .	20
3.3.1	Introducing the adjoint variables . . . . .	20
3.3.2	Determining the feasible paths . . . . .	21
3.3.3	Economic interpretation of paths 4, 8 and 10 . . . . .	22
3.4	Case study . . . . .	23
3.4.1	The case of $i < (1 - f)r$ . . . . .	24
3.4.2	The case of $i > (1 - f)r$ . . . . .	29
3.5	Conclusions . . . . .	32
<b>4</b>	<b>A Model with Start-up Costs</b>	<b>33</b>
4.1	Introduction . . . . .	33
4.2	The model and its assumptions . . . . .	34
4.3	Examination of the paths . . . . .	36
4.3.1	Introduction of the adjoint variables . . . . .	36
4.3.2	Further examination of the stationary paths . . . . .	38
4.4	Case study . . . . .	43

4.4.1 The case of $i < (1 - f)r$	43
4.4.2 The case of $i > (1 - f)r$	47
4.5 Conclusions	49
<b>5 Models with a Business Cycle</b>	<b>51</b>
5.1 Introduction	51
5.2 The basic model	51
5.2.1 Description of the model	51
5.2.2 Severe recession in the case of $i < (1 - f)r$ and $m < m^*$	54
5.2.3 Severe recession in the case of $i < (1 - f)r$ and $m > m^*$	59
5.2.4 Severe recession in the case of $i > (1 - f)r$ and $m < m^\circ$	62
5.2.5 Severe recession in the case of $i > (1 - f)r$ and $m > m^\circ$	67
5.3 A model with a variable utilization rate	71
5.3.1 Description of the model	71
5.3.2 Moderate recession in the case of $i < (1 - f)r$	74
5.3.3 Moderate recession in the case of $i > (1 - f)r$	76
5.3.4 Severe recession in the case of $i > (1 - f)r$	79
5.4 A model with a cash balance	84
5.4.1 Description of the model	84
5.4.2 Severe recession in the case of $i < (1 - f)r$ and $m < m^*$	87
5.4.3 Severe recession in the case of $i < (1 - f)r$ and $m > m^*$	92
5.4.4 Severe recession in the case of $i > (1 - f)r$ and $m < m^\circ$	96
5.4.5 Severe recession in the case of $i > (1 - f)r$ and $m > m^\circ$	96
5.5 A model with an inventory of finished goods	102
5.5.1 Description of the model	102
5.5.2 Severe recession in the case of $i < (1 - f)r$ and $m > m^*$	106
5.5.3 Severe recession in the case of $i > (1 - f)r$ and $m > m^\circ$	111
5.6 Conclusions	116
<b>6 A Model with Increasing Returns to Scale, an Experience Curve and a Production Life Cycle</b>	<b>119</b>
6.1 Introduction	119
6.2 Description of the model	119
6.2.1 The production function	119
6.2.2 The price function	120
6.2.3 Problem formulation	124
6.3 Case study	126
6.4 Conclusions	131
<b>Appendices</b>	<b>133</b>
<b>A Mathematical Details for Chapter 3</b>	<b>135</b>
A.1 Problem formulation	135

A.2 Necessary conditions for optimality . . . . .	135
A.3 Elaborating the transversality conditions . . . . .	137
A.4 Further examination of some paths . . . . .	137
<b>B Mathematical Details for Chapter 4</b>	<b>139</b>
B.1 Problem formulation . . . . .	139
B.2 Necessary conditions for optimality . . . . .	140
B.3 Elaborating the transversality conditions . . . . .	141
B.4 Further examination of some paths . . . . .	142
<b>C Mathematical Details for Chapter 5</b>	<b>149</b>
C.1 The basic model . . . . .	149
C.1.1 Determining the coupling points for Subsection 5.2.2 . . . . .	149
C.1.2 Determining the coupling points for Subsection 5.2.3 . . . . .	150
C.1.3 Deriving relationships (5.22) and (5.27) . . . . .	152
C.1.4 Determining the coupling points for Subsection 5.2.4 . . . . .	153
C.1.5 Determining the coupling points for Subsection 5.2.5 . . . . .	154
C.1.6 Deriving relationships (5.45) and (5.49) . . . . .	156
C.2 A model with a variable utilization rate . . . . .	157
C.2.1 Necessary conditions for optimality . . . . .	157
C.2.2 Further examination of some paths . . . . .	160
C.2.3 Determining the coupling points for Subsection 5.3.2 . . . . .	162
C.2.4 Determining the coupling points for Subsection 5.3.3 . . . . .	163
C.2.5 Determining the coupling points for Subsection 5.3.4 . . . . .	163
C.3 A model with a cash balance . . . . .	165
C.3.1 Necessary conditions for optimality . . . . .	165
C.3.2 Further examination of some paths . . . . .	167
C.3.3 Determining the coupling points for Subsection 5.4.2 . . . . .	168
C.3.4 Determining the coupling points for Subsection 5.4.3 . . . . .	169
C.3.5 Determining the coupling points for Subsection 5.4.5 . . . . .	170
C.4 A model with an inventory of finished goods . . . . .	171
C.4.1 Necessary conditions for optimality . . . . .	171
C.4.2 Further examination of some paths . . . . .	174
C.4.3 Determining the coupling points for Subsection 5.5.2 . . . . .	177
C.4.4 Determining the coupling points for Subsection 5.5.3 . . . . .	179
<b>D Mathematical Details for Chapter 6</b>	<b>181</b>
D.1 Necessary conditions for optimality . . . . .	181
<b>Symbols and Notation</b>	<b>183</b>
