<b>Preface</b>	<b>ix</b>
<b>List of Contributors</b>	<b>xiii</b>
<b>Chapter 1 Computing Near-Optimal Schedules</b>	<b>1</b>
<i>J. K. Lenstra and D. B. Shmoys</i>	
1.1 Introduction	1
1.2 A general principle via a motivating example	2
1.3 Multiprocessor scheduling	5
1.4 Shop scheduling	9
1.5 A concluding remark	12
Acknowledgments	13
References	13
<b>Chapter 2 Recent Asymptotic Results in the Probabilistic Analysis of Schedule Makespans</b>	<b>15</b>
<i>E. G. Coffman, Jr. and W. Whitt</i>	
2.1 Introduction	15
2.2 The on-line greedy policy	18
2.3 Off-line policies	22
2.4 Policy-free error asymptotics	24
2.5 Flow shops	26
2.6 Final remarks	28
References	29
<b>Chapter 3 A Tutorial in Stochastic Scheduling</b>	<b>33</b>
<i>G. Weiss</i>	
3.1 Introduction	33
3.2 Single-machine nonpreemptive scheduling	37
3.3 Single-machine preemptive scheduling	40
3.4 Machines in parallel	42
3.5 Machines in series	48
3.6 Queueing networks with a single server	52
3.7 Restless bandits	56
3.8 Fluid approximations	58
3.9 Brownian approximations	59
Acknowledgments	59
References	59

<b>Chapter 4</b>	<b>Scheduling with Communication Delays: A Survey</b>	<b>65</b>
	<i>P. Chrétienne and C. Picouleau</i>	
4.1	Introduction	65
4.2	Problem definition and notation	66
4.3	Duplication and an unlimited number of processors	67
4.4	No duplication and an unlimited number of processors	73
4.5	No duplication and a limited number of processors	85
4.6	More general problems	87
4.7	Conclusions	88
	References	89
<b>Chapter 5</b>	<b>Profile Scheduling by List Algorithms</b>	<b>91</b>
	<i>Z. Liu and E. Sanlaville</i>	
5.1	Introduction	91
5.2	Notation	92
5.3	Nonpreemptive profile scheduling of UET tasks	94
5.4	Preemptive profile scheduling	100
5.5	Stochastic profile scheduling	104
	Acknowledgment	108
	References	109
<b>Chapter 6</b>	<b>Efficient Algorithms and a Software Tool for Scheduling Parallel Computation</b>	<b>111</b>
	<i>A. Gerasoulis and T. Yang</i>	
6.1	Introduction	111
6.2	Program partitioning and data dependence	112
6.3	Granularity and the impact of partitioning on scheduling	118
6.4	Scheduling algorithms for MIMD architecture	124
6.5	The PYRROS software tool	135
6.6	Conclusions	140
	Acknowledgments	141
	References	142
<b>Chapter 7</b>	<b>Scheduling Parallel Programs Assuming Prelocation</b>	<b>145</b>
	<i>V. J. Rayward-Smith, F. Warren Burton and G. J. Janacek</i>	
7.1	Introduction	146
7.2	Model, assumptions and terminology	147
7.3	Worst case scheduling	148
7.4	Optimal scheduling	151
7.5	Level scheduling	153
7.6	Balancing the allocation function	155
7.7	Using a random allocation function	159
7.8	Conclusions	163
	Acknowledgments	164
	References	164
<b>Chapter 8</b>	<b>Real-Time Scheduling of Periodic Tasks</b>	<b>167</b>
	<i>C. Chaouiya, S. Lefebvre-Barbaroux and A. Jean-Marie</i>	
8.1	Introduction	167

8.2	A single-server system with periodic arrivals and preemption	170
8.3	A single server under hard real-time constraints	176
8.4	A communication network with real-time constraints	182
	Appendix: illustration of the proof of Theorem 8.6	188
	References	190
<b>Chapter 9</b>	<b>Cyclic Scheduling on Parallel Processors: An Overview</b>	<b>193</b>
	<i>C. Hanen and A. Munier</i>	
9.1	Introduction	193
9.2	The basic cyclic scheduling problem	195
9.3	Dynamic scheduling	198
9.4	BCS with resource constraints	208
9.5	Properties of periodic schedules	212
9.6	Algorithms for periodic scheduling on parallel processors	217
9.7	Other models	221
9.8	Conclusions	223
	References	224
<b>Chapter 10</b>	<b>Some Graph Coloring Models for Cyclic Scheduling</b>	<b>227</b>
	<i>D. de Werra and P. Solot</i>	
10.1	Introduction	227
10.2	Cyclic scheduling	229
10.3	Equitable edge colorings and scheduling	232
10.4	Cyclic compact schedules	236
10.5	Conclusions and additional questions	238
	References	239
<b>Chapter 11</b>	<b>Transforming Cyclic Scheduling Problems into Acyclic Ones</b>	<b>241</b>
	<i>F. Gasperoni and U. Schwiegelshohn</i>	
11.1	Introduction	241
11.2	Machine model	242
11.3	Tasks and cyclic tasks	245
11.4	Periodic schedules	247
11.5	Core schedules	250
11.6	Main result	252
11.7	Applications and conclusions	256
	Acknowledgments	257
	References	257
<b>Chapter 12</b>	<b>Recent Advances in Branch-and-Bound Procedures for Resource-Constrained Project Scheduling Problems</b>	<b>259</b>
	<i>W. S. Herroelen and E. L. Demeulemeester</i>	
12.1	Introduction	259
12.2	Branch-and-bound for the RCPSP	263
12.3	Extension of the DH procedure to the GRCPSP	270
12.4	Extension of the DH procedure to the PRCPSP	272
12.5	Conclusions	274
	References	274

<b>Chapter 13</b>	<b>The Job Shop Scheduling Problem: A Concise Survey and Some Recent Developments</b>	<b>277</b>
	<i>E. Pinson</i>	
13.1	Introduction	277
13.2	Problem statement and complexity results	278
13.3	Optimization algorithms	280
13.4	Approximation algorithms	289
13.5	Conclusions	290
	Acknowledgments	291
	References	291
<b>Chapter 14</b>	<b>Application of Majorization to Control Problems in Queueing Systems</b>	<b>295</b>
	<i>D. Towsley</i>	
14.1	Introduction	295
14.2	Stochastic ordering and majorization	296
14.3	Optimality of the smallest remaining processing time (SRPT) policy	299
14.4	Extremal properties of queueing disciplines	303
14.5	Applications to routing	306
14.6	Summary	309
	Acknowledgment	310
	References	310
<b>Chapter 15</b>	<b>Scheduling and Interchangeability in Tandem Queues</b>	<b>313</b>
	<i>R. Weber</i>	
15.1	Fundamentals	313
15.2	The two machine flow shop	316
15.3	Interchangeability	319
15.4	Literature	322
	References	324
<b>Chapter 16</b>	<b>Dynamic Routing and Sequencing in Open Queueing Networks</b>	<b>327</b>
	<i>C. N. Laws</i>	
16.1	Introduction	327
16.2	Heavy traffic analysis	329
16.3	Routing and sequencing policies	333
	References	335
<b>Chapter 17</b>	<b>Bandit Processes: Control, Analysis and Characterization</b>	<b>337</b>
	<i>H. Kaspi, A. Mandelbaum and R. J. Vanderbei</i>	
17.1	Introduction	337
17.2	Prior research	338
17.3	The multi-armed bandit model and its solution	339
17.4	Open problems and future directions of research	340
	References	346
