<i>List of Tables</i>	vii
<i>List of Figures</i>	ix
<i>Preface</i>	xi
1. Introduction	1
Background	1
Major themes	4
Reader's guide	6
2. The world economy: north and south	8
Demography	8
National economies	10
International trade and capital movements	14
Energy production and use	21
Inequality and deprivation	27
3. Sustainability	31
The economy and the environment	31
The economic conceptualisation of sustainability	46
An ecological conceptualisation of sustainability	49
A synthetic and operational approach?	54
4. History and perspective	60
Human history	60
Affluence and welfare	72
Measuring economic performance	82
5. Thinking about futures	86
Limits to growth?	86
Economists on limits	94

10.2	1987 Climate change scenarios	282
10.3	The enhanced greenhouse effect problem	283
10.4	1990 IPCC climate change scenarios	288
10.5	Scenarios for emissions and concentrations	294

Biologists and limits	105
Science and policy	112
6. Economics	116
A brief history of economics	116
Microeconomics	120
Macroeconomics	130
Public sector economics	139
7. Resource and environmental economics	145
Property rights	145
Policy goals	152
Policy instruments	158
Cost-benefit analysis and discounting	164
Risk and uncertainty	172
Intergenerational equity	179
Assumptions and policy	185
8. Some new economics	188
Green accounting	188
An energy theory of value	198
Responding to uncertainty	213
Ecological economics	218
9. National policy	221
Policy objectives	221
Policy instruments	226
Carbon taxation	233
Basic incomes	255
10. The international dimension	264
International trade and sustainability	264
The global climate change problem	277
Targets for prevention policy	293
Instrument choice for prevention policy	300
11. Postscript	312
<i>Notes</i>	
<i>References</i>	315
<i>Index</i>	331
	343

Tables

2.1	Population levels and densities	9
2.2	Population growth rates	9
2.3	Demographic data for selected nations	10
2.4	Per capita national income: north and south	11
2.5	Per capita national income: selected countries	12
2.6	Savings, investment and growth	13
2.7	Labour force allocations	14
2.8	Commodity shares in world trade	15
2.9	Trade patterns by commodity: 1990	17
2.10	World trade flows: 1990	18
2.11	Trade and debt: 1989	19
2.12	Capital flows to developing nations	20
2.13	Official development assistance	21
2.14	Energy use and carbon release	22
2.15	Energy balance for Australia: 1990/91	24
2.16	Components of the human development index	28
2.17	Income and the human development index	28
2.18	North-South gaps	29
2.19	Nutrition and child mortality	30
4.1	Energy flow in a terrestrial community	62
4.2	Energy inputs to bread production – United Kingdom	69
4.3	Per cent distribution of population by happiness, United States, 1946–1970	81
5.1	Surface area and net primary production	106
5.2	Human appropriation of net primary production	106
7.1	Project cost and benefit streams	165
8.1	Food provision energy accounts	199
8.2	Estimates of energy return on investment	202

9.1 Carbon dioxide tax rates and revenues	234
9.2 Price elasticity, emissions reduction and tax revenue	235
9.3 Commodity price increases due to carbon dioxide taxation at \$20 per tonne	236
9.4 Australian consumer price index increases by decile for tax of \$20 per tonne of CO ₂	242
9.5 Household welfare changes by decile for alternative tax/transfer packages - United Kingdom	247
9.6 Australian weekly expenditures by quintile: 1988/89	255
9.7 Australian weekly income per person by quintile: 1988/89	257
9.8 Operation of the Australian tax/welfare system: 1988/89	258
9.9 Illustrative calculations for a basic income system	262
10.1 Greenhouse gas comparisons	280
10.2 Sources and sinks for greenhouse gases	281
10.3 Sensitivity of carbon dioxide emissions forecasts, IEA model	286
10.4 Emissions income and population: selected nations, 1988	292
10.5 Nordhaus estimates of 'identified' climate damage costs for the United States	296
10.6 A pay-off matrix for a greenhouse emissions abatement target	299
10.7 The incentive structure with reciprocal externalities	302
10.8 Costs associated with alternative instruments for emissions reduction	309

Figures

2.1	Energy intensities	25
2.2	Energy use levels	26
3.1	Economic activity in the natural environment	32
3.2	Population stability	50
3.3	System resilience	52
3.4	Environmental problem attributes	57
4.1	Energy and mineral movement in ecosystems	61
4.2	A trophic pyramid	62
4.3	The history of human numbers	64
4.4	Annual hours of work	71
4.5	Environmentally adjusted economic performance	84
5.1	Per capita environmental impact and national income	100
5.2	GDP and emissions in OECD countries	101
5.3	Income growth scenario	102
5.4	Impact per unit of national income	103
5.5	Total impact scenario one	103
5.6	Total impact scenario two	104
6.1	Market determination of price and quantity	120
6.2	United Kingdom energy use	122
6.3	Energy price and use per unit of income	123
6.4	The effect of price on energy use	123
6.5	Savings, investment and the interest rate	136
7.1	Costs and benefits of pollution damage and abatement	148
7.2	Discounting weights	169
7.3	Density dependent growth and sustainable harvests	180
8.1	Food production: energy inputs and outputs	200
8.2	Ore grade, energy input and cost	207
10.1	The greenhouse effect	278
