

CONTENTS

Series Editor's Introduction v

1. Working With Deterministic Mathematical Models 1
The Argument in Favor of the Deterministic Approach 5

PART ONE

- 2. What Is Chaos?** 8
Necessary Conditions for Chaos 8
Characteristics of Chaos 10
- 3. Measuring Chaos** 22
Lyapunov Characteristic Exponents 22
Fourier Analysis 26
Phase Space Reconstruction of an Attractor Using Data 37
The Spatial Correlation Test 40
- 4. Estimating Chaos Models** 41
The Problem of Step Size 45
Comparing the Model's Predicted Values to the Data 45
The Future of Chaotic Studies in the Social Sciences 48
An Alternative Approach for Maps 49

PART TWO

- 5. What Is a Catastrophe?** 51
Placing the Cusp in the Range of the Data 59
- 6. Strategies for Specifying Catastrophe Models** 63
- 7. Estimating Catastrophe Models** 69
