I	Evolutionary Perspective	1
1	Decentralized Ecodynamics: a Manifesto	3
1.1	The Issues	3
1.2	Decentralization	6
1.2.1	Centralized and Decentralized Mechanisms	6
1.2.2	Connection Mechanisms	7
1.2.3	Decentralization Mechanisms	9
1.2.4	Adam Smith's Invisible Hand	11
1.2.5	Walras' Choice	12
1.2.6	Nontâtonnement Models	15
1.2.7	Visible Consumers and Viable Processes	16
1.3	Deriving Decentralizing Supply and Demand Laws	21
1.4	The Inertia Principle and Heavy Evolutions	23
1.5	Planning Procedures	26
2	Other Miscellaneous Illustrations	31
2.1	One Agent, One Commodity, One Price	33
2.1.1	Equilibria and Bifurcations	33
2.1.2	The Regulation Map	35
2.1.3	Viability Niches	37
2.1.4	Bounding Inflation	39
2.1.5	The Metasystem	41
2.1.6	The Inertia Principle	42
2.2	Example: Affine and Bilinear Systems	46
2.2.1	Affine Systems	46
2.2.2	Bilinear Systems	48

2.2.3	The Verhulst Logistic Model	50
2.3	An Elementary Keynesian Model	53
2.4	Technology and Climate Risk	62
2.5	Management of Renewable Resources	65
2.6	Storage and Viability of a Fishery	67
2.7	Demodynamics	71
2.7.1	A Demo-Economic Model	71
2.7.2	Malthusian and Boserupian Scenarios	73
2.8	State-Dependent Bounds and Cycles	75
2.9	Examples of Dynamical Games	77
2.9.1	The Prey-Predator Dynamical Game	78
2.9.2	Barth's Nomads of South Persia	84
II Ecodynamics		89
3 Dynamical Resource Allocation		91
3.1	Allocations of Scarce Resources	95
3.1.1	The Commodity Space	95
3.1.2	The Set of Resources	96
3.1.3	Introducing the Consumers	97
3.1.4	The Set of Allocations	98
3.1.5	"Differentiating" Scarcity Constraints	98
3.1.6	Preference Preorders	102
3.2	Viable Evolutions of Allocations	104
3.2.1	Prices as Messages for Decentralization	105
3.2.2	Change Functions of Visible Consumers	106
3.2.3	The Viability Problem	109
3.2.4	The Regulation Map	109
3.2.5	Dynamical Allocation of Resources	111
3.2.6	Examples	113
3.2.7	Hierarchical Decentralization of a Dynamical Economy	114
3.2.8	Monotone Allocation of Resources	116
3.2.9	Existence of an Equilibrium	117

3.3	Budgetary Constraints	118
3.3.1	Notes on Normal Cones	118
3.3.2	Budget Characterization of the Regulation Map	121
3.3.3	The Instantaneous Walras Law	122
3.4	Time-Dependent Resource Allocation	124
3.5	Mutational Dynamical Economies	128
3.6	History-Dependent Resource Allocation	131
4	Dynamical Economies	135
4.1	Toward Dynamical Economies	141
4.1.1	Dynamical Economy	142
4.1.2	Viability Domains	143
4.1.3	The Viability Theorem for Dynamical Economies	145
4.1.4	Using Viability Multipliers	145
4.1.5	Equilibria of a Dynamical Economy	146
4.1.6	Sensitivity and Local Uniqueness of the Equilibrium	147
4.2	Qualitative Economics	149
4.3	Slow Viable Solutions	155
4.3.1	Slow Viable Solutions of Dynamical Economies	156
4.3.2	Regulation by Slow Prices	157
4.3.3	Regulation by Connection Matrices	159
4.4	Selection Theorems	162
4.4.1	Selection Procedures	163
4.4.2	Minimal Selections	163
4.4.3	Optimal Selections	164
4.4.4	Michael's Selection Theorem	166
4.4.5	Steiner's Selection Theorem	166
4.5	Planning in Dynamical Economies	167
4.5.1	Continuous Planning Mechanisms	167
4.5.2	Planning Mechanisms	168
4.6	Slow Evolution of Technological Matrices	170

5	Designing Dynamical Economies	175
5.1	Frustrations	179
5.1.1	Frustrated Consumers	179
5.1.2	Minimal Frustration	181
5.2	Designing Economies through Viability Multipliers . . .	183
5.2.1	Constraints Defined as Inverse Images	183
5.2.2	Anatomizing Constraints	186
5.2.3	Case of Linear Constraints	188
5.2.4	Case of Multilinear Constraints	189
5.3	Dynamical Socio-Economies	193
5.3.1	Regulation by Shortages	194
5.3.2	Social Mobility	196
5.4	Introducing the Producers	202
5.5	Splitting Production Processes	208
5.5.1	One-Stage Production Processes	208
5.5.2	Multi-Stage Production Processes	210
6	Viability Kernels and Capture Basins	215
6.1	Toward Differential Inclusions	219
6.1.1	Differential Inclusions	219
6.1.2	The Viability Theorem	222
6.1.3	Monotone Solutions along a Preorder	223
6.1.4	Averaging a Large Number of Actions	224
6.1.5	The Invariance Theorem	226
6.1.6	Viability and Equilibria	226
6.1.7	Minimal Viability Domains	228
6.2	Viability Kernels and Capture Basins	229
6.2.1	Reachable, Viability and Capture Tubes	229
6.2.2	Topological Properties	233
6.2.3	The Viability Kernel Algorithm	235
6.2.4	Set of Equilibria	237
6.2.5	Lyapunov Stability	237
6.2.6	Limit Sets	238
6.2.7	Attractor	238

6.2.8	Fluctuations around a Target	239
6.3	Exit and Hitting Times	240
6.3.1	Exit Time Function and Viability Kernels	240
6.3.2	Dynamical Portrait of the Boundary	243
6.4	Chaos à la Saari	245
7	Bounded Inflation and Heavy Evolution	249
7.1	Bounded Inflation	256
7.1.1	Subregulation and Metaregulation Maps	256
7.1.2	Example: Equality Constraints	259
7.1.3	Example: Inequality Constraints	260
7.1.4	Other Methods for Bounding Inflation	262
7.2	Designing Adjustment Laws	263
7.3	Heavy Viable Evolutions	264
7.3.1	Punctuated Equilibria and their Viability Niches	264
7.3.2	Heavy Solutions and the Inertia Principle	266
7.3.3	Heavy Solutions under Equality Constraints	267
7.4	Heavy Price and Connective Regulation	269
7.4.1	Heavy Price Regulation	269
7.4.2	Heavy Evolution of Connection Matrices	271
7.5	Hierarchical Games	273
7.5.1	Cascades	275
7.5.2	Dynamical Cascades	276
7.5.3	Hierarchical Heavy Viable Solutions	278
7.5.4	Hierarchical Viability Niches	279
7.5.5	Designing Cascades	280
8	Dynamical Inequalities	283
8.1	Epigraphs	288
8.1.1	Extended Functions and their Epigraphs	288
8.1.2	Contingent Epiderivatives	290
8.2	The Quantitative Viability Theorem	290
8.3	Lyapunov Functions	293
8.3.1	Construction of Lyapunov Functions	294
8.3.2	The Montagnes Russes Algorithm for Global	

	Optimization	295
8.4	Construction of Hitting, Exit and Crisis Functions . . .	297
8.5	Optimal Evolution under Infinite Horizon	301
8.5.1	Monotone Solutions	302
8.5.2	The Value Function	308
8.6	Infinite Horizon Optimization Problems under Bounded Inflation	311
8.7	The Viability Kernel Algorithm	314
9	Dynamical Games	317
9.1	Comprehensive Dynamical Economies	320
9.1.1	Comprehensive Dynamic Economies as Differential Inclusions	322
9.1.2	Viability Niches	324
9.2	Games Against Nature	325
9.2.1	Discriminating and Leadership Properties	327
9.2.2	Conditional Viability Kernel	328
9.2.3	Discriminating Kernel	331
9.2.4	Guaranteed Viability Kernel	334
9.3	Intertemporal Dynamical Games	339
III	The Mathematical Tool Box	343
10	Pseudo-Inverses and Tensor Products	345
10.1	Pseudo-Inverses of Linear Operators	346
10.1.1	Projections onto Inverse Images of Convex Sets .	348
10.1.2	Orthogonal Left-Inverses	350
10.1.3	Pseudo-inverses	352
10.2	Tensor Products of Linear Operators	353
10.3	Pseudo-Inverses of Tensor Products	355
10.3.1	Scalar Products on $\mathcal{L}(X, Y)$	355
10.3.2	Pseudo-Inverse of $A \otimes B$	356
10.3.3	Orthogonal Projection on Subsets of Matrices . .	358

11 Set-Valued Analysis	361
11.1 Upper Limits of Sets	362
11.2 Contingent Cones	363
11.2.1 Definition	363
11.2.2 Lower Semicontinuous Maps	364
11.2.3 Sleek Subsets	365
11.2.4 Lower Semicontinuity Criteria	368
11.2.5 Contingent Cones to Closed Sleek Subsets	370
11.2.6 Case of Inequality Constraints	371
11.3 Contingent Derivatives of Maps	372
11.3.1 Graphical Convergence of Maps	372
11.3.2 Contingent Derivatives	373
11.3.3 Codifferentials	375
11.3.4 A Chain Rule for Contingent Derivatives	376
11.4 Contingent Epiderivatives of Functions	377
11.4.1 Epilimits	377
11.4.2 Contingent Epiderivatives	378
12 The Viability and Invariance Theorems	381
12.1 The Viability Theorem	382
12.1.1 Necessary Condition	383
12.1.2 Sufficient Conditions	384
12.1.3 The Convergence Theorem	386
12.1.4 The Stability Theorem	389
12.2 The Filippov Theorem	390
12.3 Time Dependent Differential Inclusions	392
12.3.1 Viable Tubes	393
12.3.2 Invariant Tubes	395
12.3.3 Characterization of Reachable Tubes	397
12.4 Differential Inclusions with Memory	398
12.4.1 History and Future Spaces	398
12.4.2 Concatenations	399
12.4.3 Contingent Histories	399
12.4.4 Viability Constraints with Delays	401
12.4.5 Volterra Viability Constraints	402
12.5 Mutational Equations	402

13 Optima	407
13.1 Subdifferential and the Fermat Rule	409
13.2 Conjugate Functions	412
13.3 Duality Theory in Convex Optimization	414
13.3.1 The Fenchel Theorem	415
13.3.2 Calculus of Conjugate Functions	416
13.3.3 Subdifferential Calculus	417
13.3.4 Calculus of Tangent Cones to Convex Sets	419
13.3.5 The Duality Theorem	419
13.4 Three Dynamical Processes for Optimal Allocations	423
13.4.1 Utility Functions	423
13.4.2 Demand and Change Maps	427
13.4.3 Supply and Pricing Maps	428
13.4.4 Optimal Allocations	429
13.4.5 A Tâtonnement Process	432
13.4.6 A Nontâtonnement Process	433
13.4.7 A Viable Process	433
14 Equilibria	437
14.1 The Ky Fan Inequality	438
14.2 The Walrasian Model	440
14.2.1 The Numéraire	441
14.2.2 The Arrow-Debreu Theorem	442
14.2.3 Walras Equilibria of Excess Demand Maps	444
14.3 Equilibrium Theorem on Convex Domains	448
14.4 Fixed Point Theorems	451
14.5 The Inverse Function Theorem	452
15 Stochastic Viability	457
15.1 Stochastic Tangent Sets	459
15.2 Stochastic Viability	460
15.3 Stochastic Lyapunov Functions	471
15.3.1 Stochastic Contingent Epiderivatives	471
15.3.2 The Characterization Theorem	472
15.3.3 Functionally Absorbing Sets	473
15.3.4 Attracting Sets	474
