Notes on contributors	5
Introduction	7
<i>Donald Peterson</i>	
1 The growth of knowledge 2 Dimensions 3 Issues 4 The chapters	
Alternative representations of instructional material	28
<i>Hermína J.M. Tabachneck-Schijf and Herbert A. Simon</i>	
1 Representations 2 Pictorial representations	
Problem solving and learning with diagrammatic representations in physics	47
<i>Peter C-H. Cheng</i>	
1 Introduction 2 Conservation laws and collisions problems 3 ReMIS-CL Observations 4 Mathematical representation 5 Qualitative and structural reasoning 6 LEDs and problem solving 7 LEDs, learning and related work	
Multiple knowledge representations: maps and aeronautical navigation	67
<i>Blay Whitby</i>	
1 Introduction 2 Maps as knowledge representations 3 Knowledge representation in aeronautical navigation 4 Conclusions	
Representation and geometrical methods of problem-solving	79
<i>Laurence Goldstein</i>	
The projection of semantic onto syntactic structures	86
<i>Timothy C. Potts</i>	
1 Semantic versus syntactic structures 2 Categorial graphs 3 Syntactic structures 4 Projections 5 Hypostases	
Representations for changing one's mind	101
<i>Ajit Narayanan and Mikael Bodén</i>	
1 The issue of representations 2 Difficulties with nonmonotonic reasoning 3 Overview of the representational architecture 4 Hyperplane analysis 5 The experiment 6 Conclusion	

Towards a general theory of representations	118
<i>Aaron Sloman</i>	
1 Introduction 2 The importance of 'abstract', or 'virtual', machines 3 Avoid simplistic dichotomies 4 What is a form of representation? 5 The syntax (or grammatical form) of a control state 6 Pragmatics of a control state 7 Semantics of a control state 8 Inferences (reasoning) in control states 9 The magic square example 10 Simpler processing requires more sophisticated concepts 11 Efficiency of a representation is relative to a virtual machine 12 Ontological, epistemological and heuristic requirements 13 Conclusion	
Internal representations and external notations: a developmental perspective	141
<i>Annette Karmiloff-Smith</i>	
1 Introduction 2 Internal representations 3 External notations 4 The developing brain 5 The human print-out facility	
Re-presenting representation	152
<i>Chris Thornton</i>	
1 Introduction 2 Constructive induction 3 Making what is implicit explicit 4 Step signatures 5 Discussion	
Redescription, information and access	163
<i>Terry Dartnall</i>	
1 Introduction 2 Representational redescription 3 Problems 4 Information and access 5 Implementation 6 Thoughts, theories and abilities	
Representation and interpretation in quantum physics	180
<i>Basil J. Hiley and Paavo Pylkkänen</i>	
1 Introduction 2 A philosophical prelude 3 Alternative representations in classical physics 4 Alternative representations of the quantum domain 5 Conclusion	
Alternative representations and the Complementarity Model of Mind-Brain	198
<i>Paul C.L. Tang</i>	
Parts I-V
