**CONTENTS**

---

PREFACE	xv
INTRODUCTION	xvii

**CHAPTER • 1 Financial Derivatives**  
*A Brief Introduction*

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Definitions</b>	<b>2</b>
<b>3</b>	<b>Types of Derivatives</b>	<b>2</b>
3.1	Cash-and-Carry Markets	3
3.2	Price-Discovery Markets	4
3.3	Expiration Date	4
<b>4</b>	<b>Forwards and Futures</b>	<b>5</b>
4.1	Futures	6
<b>5</b>	<b>Options</b>	<b>6</b>
5.1	Some Notation	7
<b>6</b>	<b>Swaps</b>	<b>9</b>
6.1	A Simple Interest Rate Swap	10
<b>7</b>	<b>Conclusions</b>	<b>11</b>
<b>8</b>	<b>References</b>	<b>11</b>

**CHAPTER • 2 A Primer on the Arbitrage Theorem**

<b>1 Introduction</b>	<b>12</b>
<b>2 Notation</b>	<b>13</b>
2.1 Asset Prices	14
2.2 States of the World	14
2.3 Returns and Payoffs	15
2.4 Portfolio	16
<b>3 A Basic Example of Asset Pricing</b>	<b>16</b>
3.1 A First Glance at the Arbitrage Theorem	18
3.2 Relevance of the Arbitrage Theorem	19
3.3 The Use of Synthetic Probabilities	20
3.4 Martingales and Submartingales	23
3.5 Equalization of Rates of Return	23
<b>4 A Numerical Example</b>	<b>24</b>
4.1 Case 1: Arbitrage Possibilities	25
4.2 Case 2: Arbitrage-Free Prices	26
4.3 An Indeterminacy	26
<b>5 An Application: Lattice Models</b>	<b>27</b>
<b>6 Some Generalizations</b>	<b>29</b>
6.1 Time Index	29
6.2 States of the World	30
6.3 Discounting	30
<b>7 Conclusions: A Methodology for Pricing Assets</b>	<b>30</b>
<b>8 References</b>	<b>31</b>
<b>9 Appendix: Generalization of the Arbitrage Theorem</b>	<b>31</b>

**CHAPTER • 3 Calculus in Deterministic and Stochastic Environments**

<b>1 Introduction</b>	<b>35</b>
1.1 Information Flows	36
1.2 Modeling Random Behavior	36
<b>2 Some Tools of Standard Calculus</b>	<b>37</b>

<b>3 Functions</b>	<b>37</b>
3.1 Random Functions	38
3.2 Examples of Functions	39
<b>4 Convergence and Limit</b>	<b>42</b>
4.1 The Derivative	42
4.2 The Chain Rule	47
4.3 The Integral	49
4.4 Integration by Parts	55
<b>5 Partial Derivatives</b>	<b>56</b>
5.1 Example	57
5.2 Total Differentials	57
5.3 Taylor Series Expansion	58
5.4 Ordinary Differential Equations	62
<b>6 Conclusions</b>	<b>64</b>
<b>7 References</b>	<b>64</b>

## CHAPTER • 4 Pricing Derivatives *Models and Notation*

<b>1 Introduction</b>	<b>65</b>
<b>2 Pricing Functions</b>	<b>66</b>
2.1 Forwards	66
2.2 Options	68
<b>3 Application: Another Pricing Method</b>	<b>72</b>
3.1 Example	73
<b>4 The Problem</b>	<b>74</b>
4.1 A First Look at Ito's Lemma	74
4.2 Conclusions	76
<b>5 References</b>	<b>77</b>

## CHAPTER • 5 Tools in Probability Theory

<b>1 Introduction</b>	<b>78</b>
<b>2 Probability</b>	<b>78</b>
2.1 Example	79
2.2 Random Variable	80

<b>3 Moments</b>	<b>81</b>
3.1 First Two Moments	81
3.2 Higher-Order Moments	82
<b>4 Conditional Expectations</b>	<b>84</b>
4.1 Conditional Probability	84
4.2 Properties of Conditional Expectations	86
<b>5 Some Important Models</b>	<b>87</b>
5.1 Binomial Distribution in Financial Markets	87
5.2 Limiting Properties	88
5.3 Moments	89
5.4 The Normal Distribution	90
5.5 The Poisson Distribution	94
<b>6 Convergence of Random Variables</b>	<b>95</b>
6.1 Types of Convergence and Their Uses	95
6.2 Weak Convergence	97
<b>7 Conclusions</b>	<b>99</b>
<b>8 References</b>	<b>100</b>

## CHAPTER • 6 Martingales and Martingale Representations

<b>1 Introduction</b>	<b>101</b>
<b>2 Definitions</b>	<b>102</b>
2.1 Notation	102
2.2 Continuous-Time Martingales	103
<b>3 The Use of Martingales in Asset Pricing</b>	<b>104</b>
<b>4 Relevance of Martingales in Stochastic Modeling</b>	<b>106</b>
4.1 An Example	108
<b>5 Properties of Martingale Trajectories</b>	<b>110</b>
<b>6 Examples of Martingales</b>	<b>113</b>
6.1 Example 1: Brownian Motion	113
6.2 Example 2: A Squared Process	114
6.3 Example 3: An Exponential Process	115
6.4 Example 4: Right Continuous Martingales	116

<b>7 Martingale Representations</b>	<b>116</b>
7.1 An Example	117
7.2 Doob–Meyer Decomposition	120
<b>8 The First Stochastic Integral</b>	<b>123</b>
8.1 Application to Finance: Trading Gains	124
<b>9 Conclusions</b>	<b>125</b>
<b>10 References</b>	<b>126</b>

## CHAPTER • 7 Differentiation in Stochastic Environments

<b>1 Introduction</b>	<b>127</b>
<b>2 Motivation</b>	<b>128</b>
<b>3 A Framework for Discussing Differentiation</b>	<b>132</b>
<b>4 The “Size” of Incremental Errors</b>	<b>135</b>
<b>5 One Implication</b>	<b>139</b>
<b>6 Putting the Results Together</b>	<b>140</b>
6.1 Stochastic Differentials	142
<b>7 Conclusions</b>	<b>142</b>
<b>8 References</b>	<b>143</b>

## CHAPTER • 8 The Wiener Process and Rare Events in Financial Markets

<b>1 Introduction</b>	<b>144</b>
1.1 Relevance of the Discussion	145
<b>2 Two Generic Models</b>	<b>146</b>
2.1 The Wiener Process	147
2.2 The Poisson Process	149
2.3 Examples	151
2.4 Back to Rare Events	153
<b>3 SDE in Discrete Intervals, Again</b>	<b>154</b>
<b>4 Characterizing Rare and Normal Events</b>	<b>155</b>
4.1 Normal Events	158
4.2 Rare Events	160
<b>5 A Model for Rare Events</b>	<b>161</b>

<b>6 Moments That Matter</b>	<b>164</b>
<b>7 Conclusions</b>	<b>166</b>
<b>8 References</b>	<b>167</b>

## CHAPTER • 9 Integration in Stochastic Environments

### *The Ito Integral*

<b>1 Introduction</b>	<b>168</b>
1.1 The Ito Integral and SDEs	170
1.2 The Practical Relevance of the Ito Integral	171

### **2 The Ito Integral** **172**

2.1 The Riemann–Stieltjes Integral	173
2.2 Stochastic Integration and Riemann Sums	175
2.3 Definition: The Ito Integral	177
2.4 An Expository Example	179

### **3 Properties of the Ito Integral** **185**

3.1 The Ito Integral Is a Martingale	185
3.2 Pathwise Integrals	189

### **4 Other Properties of the Ito Integral** **190**

4.1 Existence	190
4.2 Correlation Properties	191
4.3 Addition	191

### **5 Integrals with Respect to Jump Processes** **192**

<b>6 Conclusions</b>	<b>192</b>
<b>7 References</b>	<b>193</b>

## CHAPTER • 10 Ito's Lemma

### **1 Introduction** **194**

### **2 Types of Derivatives** **194**

2.1 Example	196
-------------	-----

### **3 Ito's Lemma** **196**

3.1 The Notion of “Size” in Stochastic Calculus	199
3.2 First-Order Terms	201
3.3 Second-Order Terms	202

3.4 Terms Involving Cross Products	203
3.5 Terms in the Remainder	204
<b>4 The Ito Formula</b>	<b>204</b>
<b>5 Uses of Ito's Lemma</b>	<b>205</b>
5.1 Ito's Formula as a Chain Rule	205
5.2 Ito's Formula as an Integration Tool	206
<b>6 Integral Form of Ito's Lemma</b>	<b>208</b>
<b>7 Ito's Formula in More Complex Settings</b>	<b>209</b>
7.1 Multivariate Case	209
7.2 Ito's Formula and Jumps	212
<b>8 Conclusions</b>	<b>214</b>
<b>9 References</b>	<b>215</b>

## CHAPTER • 11 The Dynamics of Derivative Prices *Stochastic Differential Equations*

<b>1 Introduction</b>	<b>216</b>
1.1 Conditions on $a_t$ and $\sigma_t$	217
<b>2 A Geometric Description of Paths Implied by SDEs</b>	<b>218</b>
<b>3 Solution of SDEs</b>	<b>219</b>
3.1 What Does a Solution Mean?	219
3.2 Types of Solutions	220
3.3 Which Solution Is To Be Preferred?	222
3.4 A Discussion of Strong Solutions	222
3.5 Verification of Solutions to SDEs	225
3.6 An Important Example	226
<b>4 Major Models of SDEs</b>	<b>229</b>
4.1 Linear Constant Coefficient SDEs	230
4.2 Geometric SDEs	231
4.3 Square Root Process	233
4.4 Mean Reverting Process	234
4.5 Ornstein–Uhlenbeck Process	235
<b>5 Stochastic Volatility</b>	<b>235</b>
<b>6 Conclusions</b>	<b>236</b>
<b>7 References</b>	<b>236</b>

## CHAPTER • 12 Pricing Derivative Products *Partial Differential Equations*

<b>1</b>	<b>Introduction</b>	<b>237</b>
<b>2</b>	<b>Forming Risk-Free Portfolios</b>	<b>238</b>
<b>3</b>	<b>Partial Differential Equations</b>	<b>241</b>
3.1	Why Is the PDE an “Equation”?	242
3.2	What Is the Boundary Condition?	242
<b>4</b>	<b>Classification of PDEs</b>	<b>243</b>
4.1	Example 1: Linear, First-Order PDE	244
4.2	Example 2: Linear, Second-Order PDE	247
<b>5</b>	<b>A Reminder: Bivariate, Second-Degree Equations</b>	<b>249</b>
5.1	Circle	249
5.2	Ellipse	250
5.3	Parabola	251
5.4	Hyperbola	251
<b>6</b>	<b>Types of PDEs</b>	<b>251</b>
6.1	Example: Parabolic PDE	252
<b>7</b>	<b>Conclusions</b>	<b>253</b>
<b>8</b>	<b>References</b>	<b>253</b>

## CHAPTER • 13 The Black–Scholes PDE *An Application*

<b>1</b>	<b>Introduction</b>	<b>254</b>
<b>2</b>	<b>The Black–Scholes PDE</b>	<b>254</b>
2.1	A Geometric Look at the Black–Scholes Formula	256
<b>3</b>	<b>PDEs in Asset Pricing</b>	<b>258</b>
3.1	A Second Factor	258
<b>4</b>	<b>Exotic Options</b>	<b>263</b>
4.1	Lookback Options	264
4.2	Ladder Options	264
4.3	Trigger or Knock-in Options	264
4.4	Knock-out Options	264
4.5	Other Exotics	265
4.6	The Relevant PDEs	265

**5 Solving PDEs in Practice** 266

5.1 Closed-Form Solutions 266

5.2 Numerical Solutions 268

**6 Conclusions** 272**7 References** 272**CHAPTER • 14 Pricing Derivative Products  
*Equivalent Martingale Measures*****1 Translations of Probabilities** 273

1.1 Probability as “Measure” 273

**2 Changing Means** 277

2.1 Method 1: Operating on Possible Values 278

2.2 Method 2: Operating on Probabilities 282

**3 The Girsanov Theorem** 283

3.1 A Normally Distributed Random Variable 284

3.2 A Normally Distributed Vector 286

3.3 The Radon–Nikodym Derivative 288

3.4 Equivalent Measures 289

**4 Statement of the Girsanov Theorem** 290**5 A Discussion of the Girsanov Theorem** 292

5.1 Application to SDEs 293

**6 Conclusions** 295**7 References** 296**CHAPTER • 15 Equivalent Martingale Measures  
*Applications*****1 Introduction** 297**2 A Martingale Measure** 298

2.1 The Moment-Generating Function 298

2.2 Conditional Expectation of Geometric Processes

300

**3 Converting Asset Prices into Martingales** 3013.1 Determining  $\tilde{P}$  302

3.2 The Implied SDEs 304

**4 Application: The Black–Scholes Formula** 305

4.1 Calculation 308

<b>5 Comparing Martingale and PDE Approaches</b>	<b>310</b>
5.1 Equivalence of the Two Approaches	311
5.2 Critical Steps of the Derivation	315
5.3 Integral Form of the Ito Formula	316
<b>6 Conclusions</b>	<b>317</b>
<b>7 References</b>	<b>318</b>

## CHAPTER • 16 Tools for Complicated Derivative Structures

<b>1 Introduction</b>	<b>319</b>
<b>2 New Tools</b>	<b>320</b>
2.1 Interest Rate Derivatives	321
<b>3 Term Structure of Interest Rates</b>	<b>322</b>
3.1 Relating $r_s$ and $R_t^u$	325
<b>4 Characterization of Expectations Using PDEs</b>	<b>326</b>
4.1 Risk-Neutral Bond Pricing	327
<b>5 Random Discount Factors and PDEs</b>	<b>328</b>
5.1 Ito Diffusions	329
5.2 The Markov Property	329
5.3 Generator of an Ito Diffusion	330
5.4 A Representation for A	330
5.5 Kolmogorov's Backward Equation	332
5.6 The Feyman-Kac Formula	334
<b>6 American Securities</b>	<b>336</b>
6.1 Stopping Times	336
6.2 Use of Stopping Times	337
<b>7 Extending the Results to Stopping Times</b>	<b>338</b>
7.1 Martingales	338
7.2 Dynkin's Formula	339
<b>8 Conclusions</b>	<b>339</b>
<b>9 References</b>	<b>339</b>
<b>BIBLIOGRAPHY</b>	<b>341</b>
<b>INDEX</b>	<b>345</b>
