

## Table of Contents

Preface	v
<b>PART I</b>	
<b>INTRODUCTION TO STATE SPACE MODELING</b>	
1. The SSATS algorithm and subspace methods <i>Masanao Aoki</i>	3
2. A guide to state space modeling of multiple time series <i>Arthur M. Havenner</i>	15
<b>PART II</b>	
<b>APPLICATIONS OF STATE SPACE ALGORITHM</b>	
1. Evaluating state space forecasts of soybean complex prices <i>Derek Berwald and Arthur M. Havenner</i>	75
2. A state space model of monthly US wheat prices <i>Channing Arndt and Kenneth Foster</i>	91
3. Managing the heard: price forecasts for california cattle production <i>Lorraine Egan and Arthur Havenner</i>	107
4. Labor market and cyclical fluctuations <i>Riccardo Fiorito</i>	121
5. Modeling cointegrated processes by a vector-valued state space algorithm <i>Ralf Ostermark</i>	141
6. A method for identification of combined deterministic stochastic systems <i>David Di Ruscio</i>	181
7. Competing exchange rate models <i>Jeffrey H. Dorfman</i>	237
8. Application of state-space models to ocean climate variability in the northeast pacific ocean <i>Roy Mendelssohn and Franklin B. Schwing</i>	255
<b>PART III</b>	
<b>APPLICATIONS OF NEURAL NETWORKS</b>	
1. On the equivalence between ARMA models and simple recurrent neural networks <i>Henrik Saxén</i>	281
2. Forecasting stock market indicies with recurrent neural networks <i>Maxwell J. Rhee</i>	291
