
Contents

1. Clustering from the perspective of combinatorial data analysis.
P. Arabie and L.J. Hubert 1
2. Developments in principal component analysis.
B.D. Flury 14
3. Canonical discriminant analysis: comparison of resampling
methods and convex-hull approximation.
C. Weihs 34
4. Nonlinear methods for the analysis of homogeneity
and heterogeneity.
W.J. Heiser and J.J. Meulman 51
5. Principal component models for patterned covariance matrices,
with applications to canonical correlation analysis of several
sets of variables.
B.D. Flury and B.E. Neuenschwander 90
6. Orthogonal and projection Procrustes analysis.
J.C. Gower 113
7. Graphical modelling.
D. Edwards 135
8. Convergent computation by iterative majorization:
theory and applications in multidimensional data analysis.
W.J. Heiser 157

9.	Biplot display of multivariate categorical data, with comments on multiple correspondence analysis. K.R. Gabriel	190
10.	MANOVA biplots for two-way contingency tables. K.R. Gabriel	227
11.	Some tools for the multivariate analysis of functional data. J.O. Ramsay	269
12.	A general theory of biplots. J.C. Gower	283
