| Preface | v |
| Authors' acknowledgements | vii |
| 1. Introduction | 1 |
| Aims and purposes of the manual | 1 |
| Organization of the manual | 3 |
| Clarifying concepts and definitions | 3 |
| Segregation | 4 |
| Concentration | 5 |
| Problems of measurement | 6 |
| The quality of data | 7 |
| Consistency in data collection and recording | 7 |
| Definitions of the labour force | 7 |
| Definitions that distinguish forms of employment | 8 |
| Consistency in occupational classification schemes | 8 |
| Coding data to more than one occupational classification scheme | 9 |
| Backward and forward aggregating | 9 |
| Using a constant subset of occupations | 10 |
| Level of data aggregation | 11 |
| Industrial classification | 12 |
| Data quality: Final remarks | 12 |
| A vertical dimension | 13 |
| Identifying a suitable measurement procedure | 14 |
| 2. Simple descriptive procedures | 17 |
| Introduction | 17 |
| The sex composition of an occupation | 18 |
| The example data | 18 |
| Step 1. Sex composition of occupations | 18 |
| Step 2. Distribution of occupations according to percentage female | 23 |
| Step 3. Analysis of the extremes | 24 |
| Step 4. Analysis of the middle of the distribution | 26 |
| Step 5. Further analysis of the middle of the distribution | 27 |

| | |
|---|-----------|
| Step 6. Male and female dominance in occupations compared to the sex composition of the employed labour force | 27 |
| Step 7. Adding additional information about the labour force | 29 |
| Step 8. Using additional information about occupations | 32 |
| Step 9. Concentration patterns across time periods | 32 |
| A note of caution | 33 |
| Conclusion | 34 |
| | |
| 3. Marginal Matching: A procedure for analysing trends in occupational segregation | 35 |
| Introduction | 35 |
| Occupational segregation and Marginal Matching : General information | 36 |
| Extending the use of the Marginal Matching procedure | 39 |
| Summary | 40 |
| Instructions for finding the level of occupational segregation | 41 |
| Program sets for SPSS | 41 |
| A program set for Lotus 1-2-3 | 42 |
| Worksheets and definitions of symbols | 42 |
| Analysing trends over time | 43 |
| SPSS program set 1: Instructions for data where the occupation is the unit of analysis | 44 |
| Lotus 1-2-3 program set: Instructions for data where the occupation is the unit of analysis | 60 |
| SPSS program set 2: Instructions for data where the individual is the unit of analysis | 72 |
| | |
| 4. Evaluating measures of gender segregation | 87 |
| Gender segregation measures | 87 |
| The mathematical forms of the segregation indices | 89 |
| The Index of Dissimilarity (ID) | 90 |
| The Sex Ratio Index (SR) | 91 |
| The WE Index (WE) | 91 |
| The Gini Coefficient (G) | 92 |
| Segregation measures as statistics of association | 93 |
| Marginal Matching (MM) – Mathematical form and relation to Basic Segregation Table | 95 |
| Deciding on a measure of occupational gender segregation | 96 |
| The conceptualization of occupational segregation, and its relation to the scale of measured values | 97 |
| The insensitivity of measured segregation values to factors other than segregation | 101 |
| The advantage of Marginal Matching | 106 |
| Conclusion | 107 |
| Instructions for finding other indices of segregation | 107 |

| | |
|---|-----|
| SPSS program set 1: Instructions for data where the occupation is the unit of analysis | 108 |
| Lotus 1-2-3 program set: Instructions for data where the occupation is the unit of analysis | 111 |
| SPSS program set 2: Instructions for data where the individual is the unit of analysis | 113 |

| | |
|-------------------|-----|
| References | 117 |

| Further reading | 120 |
|------------------------|-----|

Boxes

| | |
|---|----|
| 1. Grouping of titles in ISCO-88 | 11 |
| 2. SPSS worksheet for occupational data | 58 |
| 3. Definitions of symbols used in the SPSS program instructions | 59 |
| 4. Lotus 1-2-3 worksheet for occupational data | 70 |
| 5. Definitions of symbols used in the Lotus 1-2-3 instructions | 71 |
| 6. SPSS worksheet for individual data | 84 |
| 7. Definitions of symbols used in the SPSS program instructions | 85 |

Figures

| | |
|---|----|
| 1. Distribution of men and women across occupational groups ordered by percentage female | 21 |
| 2. Distribution of female workers across occupational orders | 23 |
| 3. Distribution of workers in occupations classified by percentage female | 24 |
| 4. Occupations grouped by gender dominance: Analysis of the middle of the distribution | 26 |
| 5. Difference between the percentage female in each occupational order and the percentage female in the employed labour force | 28 |
| 6. Distribution of female workers in occupational groups ordered by percentage of part-timers | 31 |
| 7. Distribution of workers in occupations grouped by percentage female, 1971 and 1981 | 33 |

Tables

| | |
|--|-----|
| 1. Data from the 1981 Census of Great Britain: Occupational orders by sex | 20 |
| 2. Occupational orders at the extremes of the distribution | 25 |
| 3. Distribution of men and women between occupations with mixed and strongly dominated gender patterns | 27 |
| 4. 2 x 2 table for Marginal Matching procedure | 37 |
| 5. The Basic Segregation Table: Women and men in "female" and "male" occupations | 94 |
| 6. The modified Basic Segregation Table with Matched Marginals | 95 |
| 7. Summary of whether segregation measures meet the seven criteria | 107 |
