Part 1 — Setting the Scene

Chapter 1	HOW TO USE THIS BOOK	1
Chapter 2	DISTINGUISHING FEATURES OF MM	
2.1	Overview of MM's relationship to other macro models	5
	(a) Size	5
	(b) Eclecticism	5
	(c) Relationship to macro and micro paradigms	6
	(d) Long-run properties	9
	(e) Specification testing	9
2.2	Main economic features	9
	(a) Dornbusch Model attributes	10
	(b) Long-run optimizing behaviour in production	11
	(c) Feedback effects from assets	13
Chapter 3	PRINCIPAL MECHANISMS IN MM	
3.1	Introduction	15
3.2	The Mundell-Fleming model	15
	(a) The MF model's equations	15
	(b) Monetary and fiscal policy under flexible exchange rates in the MF model	19
3.3	Dornbusch's 1976 model	21
	(a) Basic assumptions	22
	(b) Underlying structural model	23
	(c) Partially reduced form	26
	(d) More on the underlying structural model— portfolio balance	30
	(e) Equilibrium exchange rate	32
	(f) Model consistent expectations	36
	(g) The effects of a monetary expansion under rational expectations	38
3.4	Insights from 1980s developments in open-economy macroeconomics	46
3.5	Synopsis of illustrative simulations with MM	47
	(a) Monetary expansion	48
	(b) The NAIRU and the neoclassical long run	51
	(c) Fiscal policy and public debt feedback	53
	(d) Private consumption and foreign debt feedback	54
	(e) Non-Ricardian equivalence	56

CHAPTER 3 (continued)

3.6 A highly stylized miniature model of balanced growth (HSM)	58
(a) Main assumptions underlying HSM	58
(b) Production function and resource endowment	63
(c) Capital accumulation and the rate of return; domestic inflation and exchange rate determination	63
(d) Growth in capital stock, workforce, output and real wages	65
(e) Intertemporal budget constraint	67
(f) Balance of trade	70
(g) Qualitative behaviour of HSM under parameter shifts	71
(h) Growth rates of prices and of nominal and real magnitudes in HSM and in MM	75
3.7 Conclusions from this chapter	77

Part 2 — Structural Form of MM

Chapter 4 OVERVIEW OF PART TWO

4.1 Introduction	79
4.2 Notation	81
4.3 Nomenclature for equations	81
4.4 Estimation methods, specification searches and hypothesis testing	82
(a) General considerations	82
(b) Data sources	83
(c) Computing	83
(d) Estimation methods	84
(e) Obtaining a preferred equation	84
(f) Diagnostic testing	84
4.5 Equation count and standard closure for simulations	86
4.6 Brief account of solution method	88

Chapter 5 WAGE BEHAVIOUR

5.1 Introduction	93
5.2 Technological change - basic ideas	93
(a) Numerical example	95
(b) Factor-augmenting technical change	96
(c) Efficiency units	96
5.3 The role of Harrod-neutral technical progress in MM	97
5.4 Notation - Variables in wage equation S03	104
5.5 Inflationary expectations augmented Phillips Curve — Steady state	104 106
5.6 Estimated coefficients	107

Chapter 6 LABOUR FORCE PARTICIPATION

6.1 Introduction	109
6.2 Notation	109
6.3 Finding the underlying trend in the potential size of the workforce	109
6.4 Labour supply equation S02	110
6.5 Estimated coefficients	112
6.6 Steady state	112
6.7 Encouraged/discouraged worker effect	113

Chapter 7	PRIVATE CONSUMPTION BEHAVIOUR	
7.1	Introduction and notation	117
7.2	Equilibrium consumption – equations S04A	117
7.3	Dynamic disequilibrium consumption equation S04	120
7.4	Steady state	121
7.5	Parameter Estimates	122
Chapter 8	BEHAVIOUR OF THE RENTAL PRICE OF HOUSING	
8.1	Introduction and notation	123
8.2	Allocation of consumption into housing rental services and other	125
8.3	Dwelling rental price dynamics — within sample — equation S01	128
8.4	Steady state	130
8.5	Dwelling rental price dynamics – forecast period	130
8.6	Estimated coefficients	132
8.7	Behavioural identity I03 – consumption price index and identity I01, definition of real consumption	132
Chapter 9	PRODUCTION OF HOUSING RENTAL SERVICES AND INVESTMENT IN DWELLINGS	
9.1	Introduction	135
9.2	Notation — Levels variables	136
9.3	Notation — Depreciation, interest, growth and inflation rates	137
9.4	Notation — Coefficients	138
9.5	Production of housing rental services — identity I04	138
9.6	The natural real growth rate — identities I71 and I72	139
9.7	Dwelling investment — equation S05	141
	— Present value calculation	141
	— Expectations of investors in housing stock	142
	— Steady state	145
9.8	Estimated coefficients	146
	— Estimated risk premium	147
9.9	Some weaknesses of the approach	147
Chapter 10	THE ENTERPRISE PRODUCTION BLOCK OF THE BUSINESS SECTOR	
10.1	Introduction	149
10.2	An overview of the production structure of the enterprise economy	150
10.3	Preliminaries on the CES/CET production technology	150
	— Input-output separability	150
10.4	Lengths of run in MM and in the enterprise production block	155
(a)	Introduction	155
(b)	Concepts of length of run	156
	— Short (or Keynesian) run of MM as a whole	157
	— Medium (or classical) run of MM as a whole	157
	— Long (or neoclassical) run of MM as a whole	157
(c)	The medium run of the enterprise production block	158
(d)	Parameter estimation of the medium-run neoclassical sub-model	165
(e)	The long run of the enterprise production block	168
(f)	Role of the medium- and long-run closures of the enterprise production block in generating the long run of MM as a whole	171

Chapter 11	BUSINESS FIXED INVESTMENT	
11.1	Introduction and notation	175
11.2	Expected present value of the net revenue stream	178
11.3	Tobin's (average) q ratio	180
11.4	Stochastic dynamic investment equation S13	181
	— Steady state	183
11.5	Estimated coefficients	184
Chapter 12	BUSINESS SECTOR EMPLOYMENT	
12.1	Introduction and notation	185
12.2	Business sector employment equation S10	185
12.3	Steady state	187
12.4	Estimates	188
Chapter 13	IMPORT SUPPLY AND DEMAND	
13.1	Introduction and notation	189
13.2	Import supply under the small country assumption	189
13.3	Import demand — introduction and notation	190
13.4	Equilibrium import demand equation	191
13.5	Dynamic demand equation for imports S09	191
	— Steady state	192
13.6	Estimates	193
13.7	Trade-weighted exchange rate index	194
Chapter 14	AGGREGATE EXPORT SUPPLY	
14.1	Introduction, notation and specification	197
	— Steady state	198
14.2	Estimates	198
Chapter 15	DISAGGREGATION OF EXPORT SUPPLY	
15.1	Introduction; notation and specification for export compositional equation S06; its steady state	199
15.2	Estimates	200
15.3	Supply of 'other' exports	201
15.4	Supply of 'commodity' exports	201
15.5	Price index for aggregate exports	202
Chapter 16	OVERSEAS DEMAND FOR 'COMMODITY' EXPORTS	
16.1	Introduction and notation	203
16.2	Form of the demand equation	204
16.3	Steady state	204
16.4	Estimates	205
Chapter 17	INVENTORY INVESTMENT IN 'COMMODITY' EXPORTS	
17.1	Introduction and generic notation; form of the inventory equations	207
17.2	Inventory investment in 'commodity' exports	208
	(a) Notation for stochastic inventory equation S07 and accumulation identity I07	208
	(b) Export 'commodity' inventory investment equation S07	209
	(c) Estimates	211
	(d) Steady state	212
Chapter 18	DEMAND FOR NON-'COMMODITY' EXPORTS	
18.1	Introduction and notation	213
18.2	Form of the demand and flexibility equations	214
18.3	Estimates	214
18.4	Steady state	214

Chapter 19	DOMESTIC GOOD INVENTORY INVESTMENT	
19.1	Introduction and notation	215
19.2	Desired stock of non-farm inventories	215
19.3	Partial adjustment equation	216
19.4	Estimated coefficients	217
19.5	Steady state	218
Chapter 20	PRICE DYNAMICS FOR THE DOMESTIC GOOD	
20.1	Introduction, notation and specification — Steady state	219 220
20.2	Estimated coefficients	220
Chapter 21	SALES OF THE DOMESTIC GOOD; MISCELLANEOUS IDENTITIES FOR INVESTMENT AND CAPITAL	
21.1	Introduction and notation for identities I08, I09, I13 and I44	223
21.2	Demand for, and sales of, the domestic good, and miscellaneous identities	224
(a)	Demand determination of output of the domestic good in the very short run	224
(b)	Public-private split of business fixed investment	226
Chapter 22	THE GOVERNMENT SECTOR	
22.1	Introduction	227
22.2	General government sector spending	228
22.3	The public sector deficit — identities I35—I38 and I45—I49	228
22.4	Public sector portfolio allocation	234
22.5	Target public debt to GDP ratio and the tax reaction function	236
(a)	The tax reaction function I48	239
(b)	Steady state	240
(c)	Calibration	240
Chapter 23	FINANCIAL MARKETS	
23.1	Introduction	241
23.2	Formation of interest rates - identities I31-I33, I15-I17, I26	242
(a)	Notation for interest rate formation and uncovered interest parity	242 242
(b)	Expectations theory of the term structure of interest rates	246
(c)	Inflation and inflationary expectations	247
(d)	Real 10-year bond rate	247
(e)	Long-run actual rate of return on business fixed capital	248
(f)	Definitions of foreign short- and long-term interest rates	248
23.3	Uncovered interest parity - identity I27	251
23.4	Two key exchange rates	253
23.5	Money demand - equation S16	253
(a)	Specification and notation	254
(b)	Estimates	255
23.6	Balance of payments identity I51	255
Chapter 24	NATIONAL-ACCOUNTING, STOCK-FLOW AND MISCELLANEOUS IDENTITIES	
24.1	Introduction	259
24.2	National-accounting identities	260
24.3	Stock-flow Identities	263
24.4	Lead-lag Identities	263
24.5	Three definitional identities	263
APPENDICES TO PART 2		
2.1	List of variables in MM	265
2.2	List of coefficients and parameters in MM	279
2.3	Classification of MM equations	287
2.4	Consolidated equation list	291
2.5	Concordance between original MM notation for variables and notation used in Part 2	301

Part 3 — Simulations with MM

Chapter 25 INTRODUCTION TO THE SIMULATIONS

25.1	Preamble	303
25.2	Use of miniature models in Part 3	303
25.3	Guide to Chapters 26 and 27	305

Chapter 26 MONETARY SHOCKS

26.1	Introduction and notation	307
26.2	Features shared with the Dornbusch model	309
26.3	Overshooting and undershooting exchange rates revisited	311
	(a) Inevitability of overshooting in DBM	311
	(b) Possible sources of different exchange rate behaviour in DBM and MM	312
	(c) Rigorous definition of undershooting and overshooting exchange rates	314
	(d) Reporting simulation results for the exchange rate as deviations	314
	(e) MM's undershooting exchange rate	315
26.4	An extended Dornbusch model with inertia	317
	(a) Inertia in the IS curve	317
	(b) Solution sequence for the extended DBM	318
	(c) Form of the lag distribution for aggregate demand in the extended DBM	319
	(d) Factors responsible for inertia in aggregate demand in MM	321
	(e) Solutions of the extended DBM	321
26.5	Detailed analysis of MM responses to a monetary shock	326
	(a) Effects on the interest rate via the demand for money curve	326
	(b) Strategy for explaining the path of the exchange rate after the initial devaluation	328
	(c) Simplified price system for MM	328
	(d) Calibrating the simplified price system	332
	(e) Explaining short-term interest rate movements	333
	(f) Responses of dwelling investment and consumption	334
	(g) Responses of business fixed investment	338
26.6	D4M — a descriptive miniature Murphy Model for the analysis of a monetary shock	339
	(a) GNE, the price of the domestic good, and the interest and exchange rates	339
	(b) Calibrating D4M to MM	341
	(c) Completing the miniature model: the trade account and GDP	345
	(d) Extending the coverage of D4M: investment, imports and employment	346
26.7	Summary	348

Chapter 27 A FISCAL SHOCK

27.1	The nature of the shock and general introduction	351
27.2	Strategy for constructing a shock-specific miniature	353

27.3	Identifying important initial consequences of the fiscal shock	355
	(a) The initial jump in GNE	355
	— The jump in consumption	356
	— Contribution to GNE of increased general government employment via labour market and wealth effects in MM's consumption function	357
	— Direct contributions to GNE of government spending	358
	(b) Price behaviour in quarters 1 and 2 following the shock	358
	— Regaining our bearings, I	363
27.4	Terminal conditions, I : Insights from HSM	364
27.5	Terminal conditions, II: S3MM—A stylized steady-state <u>Murphy Model</u>	366
	(a) Introduction to S3MM	366
	(b) Sustainability of foreign debt	372
	(c) Effects of fiscal expansion in S3MM	375
	— Macro comparisons with MM	377
	— Increased public consumption	379
	— Increased public employment	383
	— Regaining our bearings, II	384
27.6	F3M—A fiscal <u>miniature Murphy Model</u>	385
	(a) Steady-state values for nominal GNE, the price of the domestic good, and the nominal exchange rate	386
	(b) Calibration of F3M	387
27.7	MM's dynamic response	387
	(a) Wealth, foreign debt, labour income and consumption	388
	— Portfolio changes	390
	(b) The real exchange rate and the trade account	391
	(c) Investment and GDP	392
	(d) Employment	394
27.8	Summary	396
APPENDICES TO PART 3		
3.1	Parameter file for MM used in Part 3	397
3.2	Excel spreadsheet used to solve the Extended Dornbusch Model	399
3.3	Values of variables for calculating ratios in MM's steady state	401
