Introduction: Long-Term Potentiation as a Model for Memory Mechanisms: The Story So Far <i>Christian Hölscher</i>	1
Section One. Long-Term Potentiation <i>In Vitro</i> and <i>In Vivo</i>: How Can We Fine-Tune the Current Models for Memory Formation?	
1 Persisting with Long-Term Potentiation as a Memory Mechanism: Clues from Variations in Long-Term Potentiation Maintenance <i>Wickliffe C. Abraham</i>	37
2 Long-Term Potentiation in the Amygdala: Implications for Memory <i>Michael T. Rogan, Marc G. Weisskopf, Yan-You Huang, Eric R. Kandel, and Joseph E. LeDoux</i>	58
3 Multiple Roles for Synaptic Plasticity in Pavlovian Fear Conditioning <i>Stephen Maren</i>	77
4 Plasticity of the Hippocampal Cellular Representation of Space <i>Kathryn J. Jeffery</i>	100
Section Two. There is More to the Picture Than Long-Term Potentiation: Theta or Gamma Oscillations in the Brain and the Facilitation of Synaptic Plasticity	
5 Synaptic Potentiation by Natural Patterns of Activity in the Hippocampus: Implications for Memory Formation <i>Fenella Pike, Sturla Molden, Ole Paulsen, and Edvard I. Moser</i>	125
6 Plasticity in Local Neuronal Circuits: <i>In Vivo</i> Evidence from Rat Hippocampus and Amygdala <i>Mouna Maroun, Dan Yaniv, and Gal Richter-Levin</i>	137

7	Theta-Facilitated Induction of Long-Term Potentiation: A Better Model for Memory Formation? <i>Christian Hölscher</i>	146
8	Role of Gamma Oscillations for Information Processing and Memory Formation in the Neocortex <i>Matthias H. J. Munk</i>	167
Section Three. Making Models from Empirical Data of Synaptic Plasticity		
9	Toward a Physiologic Explanation of Behavioral Data on Human Memory: The Role of Theta-Gamma Oscillations and NMDAR-Dependent LTP <i>John Lisman, Ole Jensen, and Michael Kahana</i>	195
10	Neuronal Networks, Synaptic Plasticity, and Memory Systems in Primates <i>Edmund T. Rolls</i>	224
11	Revisiting the LTP Orthodoxy: Plasticity versus Pathology <i>Jill C. McEachern and Christopher A. Shaw</i>	263
12	Long-Term Potentiation and Associative Learning: Can the Mechanism Subserve the Process? <i>Louis D. Matzel and Tracey J. Shors</i>	294
Section Four. Setting the Stage for Memory Formation: Stress, Arousal, and Attention		
13	Strategies for Studying the Role of LTP in Spatial Learning: What Do We Know? Where Should We Go? <i>Donald P. Cain</i>	327
14	What Studies in Old Rats Tell Us about the Role of LTP in Learning and Memory <i>Gregory M. Rose and David M. Diamond</i>	346
15	Implications of the Neuropsychology of Anxiety for the Functional Role of LTP in the Hippocampus <i>Neil McNaughton</i>	362
16	Differential Effects of Stress on Hippocampal and Amygdaloid LTP: Insight Into the Neurobiology of Traumatic Memories <i>David M. Diamond, Collin R. Park, Michael J. Puls, and Gregory M. Rose</i>	379
Section Five. Transgenic Mice as Tools to Unravel the Mechanisms of Memory Formation		
17	<i>In Vivo</i> Recording of Single Hippocampal Place Cells in Behaving Transgenic Mice <i>Yoon H. Cho and Howard B. Eichenbaum</i>	407
18	Understanding Synaptic Plasticity and Learning through Genetically Modified Animals <i>Paul F. Chapman</i>	427

Contents	vii
19 What Gene Activation Can Tell Us about Synaptic Plasticity and the Mechanisms Underlying the Encoding of the Memory Trace <i>Sabrina Davis and Serge Laroche</i>	450
Conclusions and Future Targets <i>Christian Hölscher and Gal Richter-Levin</i>	476
Index	491
