

CONTENTS

Preface	xiii
List of Symbols	xvii
1 The Essence of Metabolic Engineering	
1.1 Importance of Metabolic Engineering	9
1.2 General Overview of the Book	15
References	20
2 Review of Cellular Metabolism	
2.1 An Overview of Cellular Metabolism	22
2.2 Transport Processes	25
2.2.1 Passive Transport	28
2.2.2 Facilitated Diffusion	31
2.2.3 Active Transport	34
2.3 Fueling Reactions	38
2.3.1 Glycolysis	38
2.3.2 Fermentative Pathways	45
2.3.3 TCA Cycle and Oxidative Phosphorylation	48
2.3.4 Anaplerotic Pathways	53
2.3.5 Catabolism of Fats, Organic Acids, and Amino Acids	55
2.4 Biosynthetic Reactions	57
2.4.1 Biosynthesis of Amino Acids	58
2.4.2 Biosynthesis of Nucleic Acids, Fatty Acids, and Other Building Blocks	62
2.5 Polymerization	66

2.6 Growth Energetics	71
References	76
3 Comprehensive Models for Cellular Reactions	
3.1 Stoichiometry of Cellular Reactions	82
3.2 Reaction Rates	90
3.3 Dynamic Mass Balances	93
3.4 Yield Coefficients and Linear Rate Equations	102
References	114
4 Material Balances and Data Consistency	
4.1 The Black Box Model	117
4.2 Elemental Balances	119
4.3 Heat Balance	126
4.4 Analysis of Overdetermined Systems—Identification of Gross Measurement Errors	130
References	146
5 Regulation of Metabolic Pathways	
5.1 Regulation of Enzymatic Activity	150
5.1.1 Overview of Enzyme Kinetics	152
5.1.2 Simple Reversible Inhibition Systems	153
5.1.3 Irreversible Inhibition	163
5.1.4 Allosteric Enzymes: Cooperativity	168
5.2 Regulation of Enzyme Concentration	173
5.2.1 Control of Transcription Initiation	173
5.2.2 Control of Translation	178
5.3 Global Control: Regulation at the Whole Cell Level	180
5.4 Regulation of Metabolic Networks	188
5.4.1 Branch Point Classification	193
5.4.2 Coupled Reactions and the Role of Global Currency Metabolites	196
References	200
6 Examples of Pathway Manipulations: Metabolic Engineering in Practice	
6.1 Enhancement of Product Yield and Productivity	205
6.1.1 Ethanol	205

6.1.2 Amino Acids	212
6.1.3 Solvents	220
6.2 Extension of Substrate Range	224
6.2.1 Metabolic Engineering of Pentose Metabolism for Ethanol Production	224
6.2.2 Cellulose-Hemicellulose Depolymerization	229
6.2.3 Lactose and Whey Utilization	230
6.2.4 Sucrose Utilization	233
6.2.5 Starch Degrading Microorganisms	233
6.3 Extension of Product Spectrum and Novel Products	235
6.3.1 Antibiotics	235
6.3.2 Polyketides	237
6.3.3 Vitamins	241
6.3.4 Biopolymers	243
6.3.5 Biological Pigments	250
6.3.6 Hydrogen	253
6.3.7 Pentoses: Xylitol	256
6.4 Improvement of Cellular Properties	256
6.4.1 Alteration of Nitrogen Metabolism	257
6.4.2 Enhanced Oxygen Utilization	257
6.4.3 Prevention of Overflow Metabolism	259
6.4.4 Alteration of Substrate Uptake	262
6.4.5 Maintenance of Genetic Stability	263
6.5 Xenobiotic Degradation	266
6.5.1 Polychlorinated Biphenyls (PCBs)	266
6.5.2 Benzene, Toluene, <i>p</i> -Xylene Mixtures (BTX)	267
References	273
7 Metabolic Pathway Synthesis	
7.1 Metabolic Pathway Synthesis Algorithm	288
7.2 Overview of the Algorithm	295
7.3 A Case Study: Lysine Biosynthesis	300
7.3.1 The Role of Oxaloacetate	303
7.3.2 Other Alternatives	304
7.3.3 Restrictions on the Maximum Yield	306
7.4 Discussion of the Algorithm	307
References	308
8 Metabolic Flux Analysis	
8.1 Theory	313
8.2 Overdetermined Systems	333
8.3 Underdetermined Systems—Linear Programming	341

8.4 Sensitivity Analysis	347
References	350
9 Methods for the Experimental Determination of Metabolic Fluxes by Isotope Labeling	
9.1 Direct Flux Determination from Fractional Label Enrichment	356
9.1.1 Flux Determination from Transient Intensity Measurements	356
9.1.2 Metabolic and Isotopic Steady State Experiments	357
9.2 Applications Involving Complete Enumeration of Metabolite Isotopomers	367
9.2.1 Distribution of TCA Cycle Metabolite Isotopomers from Labeled Pyruvate	371
9.2.2 Distributions of TCA Cycle Metabolite Isotopomers from Labeled Acetate	377
9.2.3 Interpretation of Experimental Data	382
9.3 Carbon Metabolite Balances	397
9.3.1 Direct Metabolite Carbon Balances	397
9.3.2 Use of Atom Mapping Matrices	405
References	409
10 Applications of Metabolic Flux Analysis	
10.1 Amino Acid Production by Glutamic Acid Bacteria	413
10.1.1 Biochemistry and Regulation of Glutamic Acid Bacteria	414
10.1.2 Calculation of Theoretical Yields	419
10.1.3 Metabolic Flux Analysis of Lysine Biosynthetic Network in <i>C. glutamicum</i>	426
10.1.4 Metabolic Flux Analysis of Specific Deletion Mutants of <i>C. glutamicum</i>	439
10.2 Metabolic Fluxes in Mammalian Cell Cultures	445
10.2.1 Determination of Intracellular Fluxes	446
10.2.2 Validation of Flux Estimates by ^{13}C Labeling Studies	452
10.2.3 Application of Flux Analysis to the Design of Cell Culture Media	457
References	458
11 Metabolic Control Analysis	
11.1 Fundamentals of Metabolic Control Analysis	464
11.1.1 Control Coefficients and the Summation Theorems	465
11.1.2 Elasticity Coefficients and the Connectivity Theorems	470
11.1.3 Generalization of MCA Theorems	473

11.2	Determination of Flux Control Coefficients	475
11.2.1	Direct Methods for FCC Determination	478
11.2.2	Indirect Methods for FCC Determination	484
11.2.3	Use of Transient Metabolite Measurements	488
11.2.4	Kinetic Models	491
11.3	MCA of Linear Pathways	492
11.4	MCA of Branched Pathways	499
11.5	Theory of Large Deviations	513
11.5.1	Unbranched Networks	514
11.5.2	Branched Networks	522
11.5.3	Response to Changes in Nutrient Concentrations and External Effectors	527
11.5.4	Discussion	529
	References	530
12	Analysis of Structure of Metabolic Networks	
12.1	Control of Flux Distribution at a Single Branch Point	539
12.2	Grouping of Reactions	545
12.2.1	Group Flux Control Coefficients	546
12.2.2	Identification of Independent Pathways	547
12.3	Case Study: Aromatic Amino Acid Biosynthetic Pathway	554
12.3.1	Model of Aromatic Amino Acid Biosynthesis in <i>S. cerevisiae</i>	554
12.3.2	Identification of Independent Pathways	557
12.3.3	Identification of Link Metabolites and Group Flux Determination	563
	References	580
13	Flux Analysis of Metabolic Networks	
13.1	Relationships among Group and Individual Control Coefficients (Bottom-Up Approach)	582
13.2	Determination of Group Control Coefficients from Flux Measurements (Top-Down Approach)	585
13.2.1	Determination of gFCCs from Three Perturbations	586
13.2.2	Determination of gFCCs from a Characterized Perturbation	590
13.2.3	Determination of gCCCs	591
13.2.4	Observability of Perturbations	592
13.3	Case Study	592
13.3.1	Analytical Determination of Group Control Coefficients (Bottom-Up Approach)	593
13.3.2	Simulation of Experimental Determination of gFCCs (Top-Down Approach)	601

13.4	Extension of Control Analysis to Intermetabolite Reaction Groups	603
13.4.1	The Perturbation Constant	603
13.4.2	Analysis of Overlapping Reaction Groups in Multiple Branch Points	605
13.4.3	Case Study	607
13.5	Optimization of Flux Amplification	609
13.5.1	Derivation of Optimization Algorithm	610
13.5.2	Case Study	613
13.6	Consistency Tests and Experimental Validation	616
13.6.1	Development of Consistency Tests Using Multiple Perturbations	618
13.6.2	Application to the Prephenate Branch Point	623
13.6.3	Effects of Measurement Error	625
	References	626
14	Thermodynamics of Cellular Processes	
14.1	Thermodynamic Principles: A Review	630
14.2	Thermodynamic Feasibility	639
14.2.1	The Algorithm	641
14.2.2	Determination of $\Delta G^{0'}$ from Group Contributions	649
14.3	Nonequilibrium Thermodynamics	663
14.4	Application of Thermokinetics to MCA	686
	References	692
	Glossary	695
	Index	707
