

CONTENTS

Chapter 1. Biodiversity and the Search for New Drugs	1
Introduction	1
Prospecting Locations and Species Extinction	3
Estimating the Value of Biodiversity for Pharmaceutical R&D	4
The Natural Product Research Process in the Pharmaceutical Industry	9
Prospecting Strategies	12
Selecting a Prospecting Strategy	16
Biochemical Prospecting and Other Methods of Drug Discovery	17
Chapter 2. A Model of the Biochemical Prospecting Process	21
Introduction	21
The Basic Model	22
Defining the R&D Process	28
Some Complications to the Basic Model	29
Applying the Model	31
Potential Applications and Extensions of the Model	62
Chapter 3. Host Country Options for Conservation and Sustainable Development	65
Introduction	65
Evaluating a Proposed Biochemical Prospecting Opportunity	66
Strategies for Sustainable Development of Biological Resources	96
Chapter 4. Contractual Arrangements for Allocating Risks and Rewards	113
Introduction	113
Exclusive Prospecting Rights	113
Allocating Financial Risks and Returns	117
Variation in Returns from Royalty and Profit-Sharing Agreements	119

Profit Sharing	123
Other Arrangements for Allocating Financial Risks and Returns	129
Supply Guarantees and Renegotiation Clauses	132
A Market for Royalty Rights and Profit Shares	133
Technology Transfer, Training, and Technical Assistance	135
Intellectual Property Rights	137
Summary and Conclusions	137
Chapter 5. International Policy Implications	139
Political Economy of Biological Resources	139
The Biodiversity Convention	142
Potential Impediments to an Efficient Biochemical Prospecting Market	144
International Policy Options	150
Summary and Conclusions	160
Appendix A. Simulated Distribution of Returns from Biochemical Prospecting Opportunity	163
Appendix B. Two-Period, Two-Site, Dynamic Programming Land-Use Planning	169
Notes	177
References	183
Index	193
