

Contents

1.	Introduction	1
2.	Information Structures in Process Control Engineering	5
2.1.	Principles	5
2.2.	Architectural Principles for Information Structuring	9
2.3.	Applications in Process Control Engineering	24
3.	Knowledge about the Process	41
3.1.	Principles	41
3.2.	Analysis Methods for Process Quantities	45
3.3.	Process Models	50
3.4.	Modeling	58
3.5.	Management and Utilization of Information	60
4.	From Process Knowledge to Process Control	73
4.1.	Principles	73
4.2.	Feedback Control	74
4.3.	Optimal Control	87
4.4.	Binary Control	89
4.5.	Operational Control of Process Plants ..	93
5.	The Process Control System and its Elements: Process Sensor Systems	113
5.1.	Principles	113
5.2.	Process Sensor System Technology	124
5.3.	Sensor Systems for Special Applications ..	140
5.4.	The Market for Sensors and Sensor Systems	169
5.5.	Field Installation and Cable Routing ...	171
6.	The Process Control System and its Elements: Process Actuator Systems ...	185
6.1.	Principles	185
6.2.	Actuator Systems for Material and Energy Streams	189

6.3.	Electrical Drives in the Chemical Industry	202
6.4.	Electric Power Supply Systems	209
7.	The Process Control System and its Elements: Distributed Control Systems	217
7.1.	Principles	217
7.2.	System and Component Structure	226
7.3.	Process Control Operating System	241
7.4.	General System Services	248
7.5.	Design and Commissioning	256
8.	The Process Control System and its Elements: Information Logistics	263
8.1.	Principles	263
8.2.	Functional Structures and Information Flow in Production Companies	263
8.3.	Computer Communications Between and Within Control Levels	264
8.4.	Computer Communications in Industrial Production; Standards	266
8.5.	MAP/TOP: Protocol Standards for Information Integration in Production Companies	267
8.6.	Field Bus Systems	269
8.7.	Quality Assurance: Conformance and Interoperability Tests	277
8.8.	Methods and Tools for Protocol Specification	278
8.9.	Steps Toward Computer-Integrated Production	279
9.	Computer-Aided Methods	283
9.1.	Principles	283
9.2.	System Analysis	283
9.3.	CAE System for Process Control Engineering	284
9.4.	Structure of a CAE System	285
9.5.	Aids for Hardware Design	286

9.6. Aids for Software Design	288
9.7. Outlook	291
10. Design and Construction of Process Control Systems	293
10.1. Principles	293
10.2. Organizational Requirements	295
10.3. Decision Phase	304
10.4. Specifications	305
10.5. Execution Phase	315
10.6. Quality Assurance	324
10.7. Process Control Rooms	328
11. Operation	335
11.1. Principles	335
11.2. Human-Process Communications	338
11.3. Process Analysis and Process Optimization	358
11.4. Maintenance Strategies	370

12. Standards, Committees, and Associations	375
12.1. Principles	375
12.2. Standardization Bodies and Other Organizations Involved in Standardization	376
12.3. Technical and Scientific Bodies	382
12.4. Shows and Fairs	388
13. Integration of Knowledge-Based Systems in Process Control Engineering	391
13.1. Principles	391
13.2. Knowledge-Based Approach	393
13.3. Knowledge Engineering	403
14. Appendix	413
14.1. Glossary	413
14.2. Abbreviations	428
15. References	431
16. Index	451
