| <i>List of figures</i> | vi |
| <i>List of tables</i> | viii |
| <i>List of contributors</i> | ix |
| <i>Preface</i> | xi |
| 1 Introduction and outline | 1 |
| PART I THEORY OF NON-LINEAR MODELS | |
| 2 The strange attraction of chaos in economics <i>John Creedy and Vance L. Martin</i> | 7 |
| 3 Fractal geometry <i>Vance L. Martin</i> | 30 |
| 4 The logistic family of discrete dynamic models <i>Robert Dixon</i> | 44 |
| 5 Towards a theory of non-linear models <i>Jenny Lye and Vance L. Martin</i> | 70 |
| 6 Multiple equilibria in simple exchange models <i>John Creedy and Vance L. Martin</i> | 87 |
| 7 A model of the distribution of prices <i>John Creedy and Vance L. Martin</i> | 100 |
| PART II ESTIMATION AND TESTING OF NON-LINEAR MODELS | |
| 8 Statistical techniques for modelling non-linearities <i>Vance L. Martin and Kim Sawyer</i> | 113 |
| 9 Non-linear time series modelling and distributional flexibility <i>Jenny Lye and Vance L. Martin</i> | 135 |
| 10 Robust estimation with the generalized exponential family <i>Jenny Lye and Vance L. Martin</i> | 151 |
| PART III CHAOS AND FINANCIAL MARKETS | |
| 11 Forecasting in financial markets <i>David Elms</i> | 169 |
| 12 Non-linearities and chaos in exchange rates <i>Jenny Ellis</i> | 187 |
| 13 Non-linearities and the long-run real exchange rate distribution <i>John Creedy, Jenny Lye and Vance L. Martin</i> | 196 |
| <i>References</i> | 213 |
| <i>Index</i> | 225 |

Figures

| | | |
|------|---|-----|
| 2.1 | Fixed point properties of the logistic model | 10 |
| 2.2 | Period doubling in the logistic model | 11 |
| 2.3 | Odd order cycles and chaos in the logistic model | 12 |
| 2.4 | Bifurcation properties of the logistic model | 14 |
| 2.5 | Sensitive dependence on initial conditions | 15 |
| 2.6 | The Henon attractor | 19 |
| 2.7 | The Kaldor business cycle model | 21 |
| 2.8 | The Lorenz attractor in the time domain | 23 |
| 2.9 | The Lorenz attractor in the space domain | 24 |
| 2.10 | Period doubling in the Rossler attractor | 26 |
| 2.11 | The Rossler attractor | 27 |
| | | |
| 3.1 | Dimensional properties of deterministic and stochastic processes | 34 |
| 3.2 | Attractors of the unit circle | 36 |
| 3.3 | The Julia set: $c=0$ | 37 |
| 3.4 | Alternative Julia sets | 38 |
| 3.5 | The Mandelbrot set | 40 |
| 3.6 | A Julia set with a three-period cycle | 42 |
| | | |
| 4.1 | An example of monotonic convergence | 49 |
| 4.2 | Various dynamic paths | 50 |
| 4.3 | Time paths for the stock-adjustment model | 52 |
| 4.4 | A four-period cycle | 54 |
| 4.5 | Boundary values of b and K necessary for chaos | 59 |
| | | |
| 5.1 | A model of intra-industry trade | 79 |
| 5.2 | Models of the expected exchange rate | 85 |
| 5.3 | The generalized beta distribution | 85 |
| | | |
| 6.1 | Linear demand curves | 89 |
| 6.2 | Offer curves | 91 |
| 6.3 | Equilibrium properties: relationships between τ_0 and w | 94 |
| 6.4 | Equilibrium properties: relationships between τ_0 and τ_1 | 96 |
| 6.5 | Demonstration of hysteresis | 97 |
| | | |
| 7.1 | Transitional price distributions | 104 |
| 7.2 | Stationary price distributions: the generalized gamma distribution | 107 |

| | | |
|------|---|-----|
| 8.1 | Comparison of alternative time series | 114 |
| 8.2 | Phase portrait properties of the logistic model | 117 |
| 8.3 | The Lyapunov exponents of the logistic equation | 125 |
| 9.1 | The generalized student t distribution | 139 |
| 9.2 | Temporal distributions of the rate of growth of the exchange rate | 148 |
| 9.3 | Conditional moments of the GENTS model | 149 |
| 10.1 | Comparison of GT and GET residuals | 161 |
| 10.2 | Crude birth rates | 162 |
| 11.1 | The Lorenz attractor | 170 |
| 11.2 | Local structure of the Ikeda attractor | 172 |
| 11.3 | Alternative predictor surfaces | |
| | (a) and (b) | 175 |
| | (c) and (d) | 178 |
| 11.4 | Comparison of local and global models: the Ikeda attractor | 181 |
| 11.5 | Selection of embedding dimensions of data sets | 183 |
| 11.6 | Comparison of prediction methods of data sets | 184 |
| 11.7 | Forecast error properties of data sets | 185 |
| 12.1 | The exchange rate equation $e_t = f(e_{t-1})$ | 191 |
| 12.2 | Simulated time series: iterations 4850–4950 | 193 |
| 12.3 | A small change in the starting value | 194 |
| 12.4 | Perturbation of the parameter α | 194 |
| 13.1 | Equilibrium real exchange rate distributions | 202 |
| 13.2 | Comparison of model predictions | 203 |
| 13.3 | Properties of θ_1 | 211 |
| 13.4 | Properties of θ_2 | 211 |
| 13.5 | Properties of δ | 212 |

Tables

| | | |
|------|---|-----|
| 3.1 | Construction of the Cantor set | 32 |
| 4.1 | A comparison of the mathematical properties of the five models | 51 |
| 4.2 | Estimates of the rate of acceptance | 63 |
| 4.3 | Heteroscedastic-consistent estimates of various parameters of diffusion on profitability variables | 64 |
| 4.4 | Estimates of the parameters in the CT scanner diffusion Equation (4.32) | 67 |
| 4.5 | Estimates of the parameters in the CT scanner diffusion Equation (4.32) allowing for an AR(1) process | 67 |
| 8.1 | Calculation of the Lyapunov exponent for the logistic equation $\mu = 4$ | 124 |
| 8.2 | Lyapunov exponents of attractors | 125 |
| 9.1 | Selected parameter estimates of the GENTS model | 146 |
| 10.1 | Parameter estimates of the Martin Marietta data | 160 |
| 10.2 | Parameter estimates for crude birth rates | 163 |
| 13.1 | Augmented Dickey–Fuller unit root test | 208 |
| 13.2 | Estimates of the real exchange rate model, 1948(1) to 1989(12) | 209 |
| 13.3 | Diagnostics of the real exchange rate model, 1984(1) to 1989(12) | 210 |
