

Chapter 1. Introduction to OSI	1
1.1 The Essence of Interconnection	1
1.1.1 Profile of an Interconnected Environment	4
1.1.2 End-to-End Connectivity	4
1.1.3 Application Interoperability	5
1.1.4 Example: Anatomy of a Communications Protocol	6
1.2 The Need for Standardization	8
1.2.1 What Should Be Standardized?	8
1.2.2 The Role of ISO/IEC and the CCITT	8
1.3 The OSI Reference Model	11
1.3.1 Architectural Overview	12
1.3.2 Why Seven Layers?	12
1.3.3 Layer Concepts	19
1.3.4 Layer Services: The “What” Aspects	21
1.3.5 Layer Protocols: The “How” Aspects	23
1.3.6 Dynamics of Layered Communications	27
1.3.7 Naming and Addressing	31
1.3.8 Communication Roles	34
1.4 Content of OSI Standards	35
1.4.1 Service Definition Content	35
1.4.2 Protocol Specification Content	36
1.4.3 Use of Formal Description Techniques (FDTs)	37
1.5 Summary and Observations	41
Chapter 2. Overview of the OSI Upper Layers	43
2.1 Anatomy of Distributed Applications	43
2.2 Information Aspects of Distributed Applications	43
2.3 Dynamic Aspects of Distributed Applications	43
2.4 Role of the Upper Layers	43

2.5	Role of the Transport Mechanism	46
2.6	Observations	49
Chapter 3. The Session Layer		51
3.1	Standards Overview	51
3.2	Model and Concepts	52
3.2.1	Model	52
3.2.2	Dialogue Modes	53
3.2.3	Synchronization, Dialogue Units, and Resynchronization	54
3.2.4	Activities	56
3.2.5	Tokens	57
3.3	Service and Protocol Overview	58
3.3.1	Service Overview	58
3.3.2	Protocol Overview	60
3.4	Phases of Operation	63
3.4.1	Session Connection Establishment Phase	63
3.4.2	Data Transfer Phase	69
3.4.3	Session Connection Release Phase	89
3.5	Connectionless-Mode Session Layer	91
3.6	Practices in Using the Session Layer	92
3.7	Enhancements and Extensions	93
3.8	Observations	93
3.9	Summary	94
Chapter 4. The Presentation Layer		95
4.1	Standards Overview	96
4.2	Model and Concepts	96
4.2.1	Model	96
4.2.2	Abstract and Concrete Syntaxes	98
4.2.3	The Role of ASN.1	99
4.2.4	Presentation Contexts	101
4.2.5	Context Management	103
4.3	Service and Protocol Overview	104
4.3.1	Service Overview	104
4.3.2	Protocol Overview	108
4.4	Phases of Operation	109
4.4.1	Presentation Connection Establishment Phase	110
4.4.2	Data Transfer Phase	115
4.4.3	Presentation Connection Release Phase	120
4.5	Connectionless-Mode Presentation Layer	121
4.6	Practices in Using the Presentation Layer	122
4.7	Extensions and Enhancements	123
4.8	Observations	123
4.9	Summary	124
Chapter 5. Introduction to Abstract Syntax Notation One (ASN.1)		125
5.1	Standards Overview	125
5.2	The Notation	126
5.2.1	Anatomy of a Data-Description Language	126
5.2.2	Overview of the Notation	127

5.2.3	Type Definition	128
5.2.4	Value Definition	129
5.2.5	Module Definition	129
5.2.6	ASN.1 Built-In Types	131
5.2.7	Other Features of ASN.1	145
5.2.8	Protocol Design Example	150
5.3	The Basic Encoding Rules (BER)	150
5.3.1	Generic Structure of Data Elements	152
5.3.2	Encoding of the Identifier, Length, and Contents	152
5.3.3	Encoding Example	153
5.4	Extensions and Enhancements	155
5.5	Observations	156
 Chapter 6. The Application Layer		157
Building Blocks for Distributed Applications		
6.1	Standards Overview	157
6.2	Application Layer Model, Concepts, and Operation	160
6.2.1	Inside a Distributed Application Environment: APs and AEs	160
6.2.2	Inside an Application Entity: ASEs, ASOs, and CFs	161
6.2.3	Naming, Addressing, and Use of Directories	165
6.2.4	Registration of Information Objects	166
6.2.5	Example: Composition and Operation of a Simple Application Entity	167
6.2.6	Observations	169
6.3	Common Application Service Elements	170
6.3.1	Association Control Service Element (ACSE)	170
6.3.2	Remote Operations Service Element (ROSE)	183
6.3.3	Reliable Transfer Service Element (RTSE)	195
6.3.4	Commitment, Concurrency and Recovery (CCR)	201
6.3.5	Summary	212
6.4	OSI Applications: An Overview	212
6.4.1	The Recipe for OSI Applications	213
6.4.2	Object Orientation: Modeling of Distributed Applications	213
 Chapter 7. The Application Layer		221
Message Handling Systems (MHS)		
7.1	Standards Overview	221
7.2	Model and Features	224
7.3	Message Transfer System (MTS)	227
7.3.1	Information Model: Messages, Probes, and Reports	228
7.3.2	MTS Abstract Service	229
7.3.3	Distributed Operation of the MTS	233
7.4	The Interpersonal Messaging System (IPMS)	235
7.4.1	Information Model: Interpersonal Messages and Notifications	235
7.4.2	IPMS Abstract Service	236
7.5	Auxiliary Objects: Message Stores, Access Units, and the Directory	238
7.5.1	Access Units (AUs)	238
7.5.2	Message Store (MS)	239
7.5.3	The Directory	240
7.6	MHS Security	241
7.6.1	Security Threats, Services, and Mechanisms	241
7.7	MHS Protocols and Application Contexts	241
7.7.1	The 1984 MHS Protocols	242
7.7.2	The 1988/1992 Protocols	243

7.8	Practices in Using MHS	247
7.9	Extensions and Enhancements	248
7.10	Observations	248
Chapter 8. The Application Layer		249
The Directory		
8.1	Standards Overview	250
8.2	Overall Model and Concepts	251
8.3	Directory Information Model	252
8.3.1	The Directory Information Base (DIB)	253
8.3.2	The Directory Information Tree (DIT) and Naming	253
8.3.3	Object Classes, Attributes, and Attribute Syntaxes	255
8.4	Directory Abstract Service	256
8.4.1	DUA-DSA Interactions	259
8.4.2	DSA-DSA Interactions	261
8.5	The Authentication Framework	262
8.5.1	Basis for Strong Authentication	262
8.5.2	Protection of Information Using Encryption	262
8.5.3	Authentication Using Digital Signatures	264
8.5.4	Certificates	264
8.5.5	Use by OSI Applications	265
8.6	Directory Protocols and Application Contexts	265
8.6.1	Directory Access Protocol (DAP)	266
8.6.2	Directory System Protocol (DSP)	266
8.6.3	Directory Information Shadowing Protocol (DISP)	266
8.6.4	Directory Operational Binding Management Protocol (DOP)	267
8.7	Practices in Using the Directory	268
8.8	Extensions and Enhancements	268
8.9	Observations	268
Chapter 9. The Application Layer		271
Systems and Network Management		
9.1	The Need for Uniform Management Standards	271
9.2	Standards Overview	275
9.3	The OSI Management Framework	276
9.3.1	Concepts and Model	276
9.3.2	OSI Management Categories	276
9.3.3	Specific Management Functional Areas (SMFAs)	278
9.3.4	Focus of Management Standards	279
9.4	Systems Management Overview	279
9.5	The Information Model: Managed Object Definition	281
9.5.1	An Object-Oriented View	281
9.5.2	Inheritance and Allomorhism	282
9.5.3	Containment and Naming	283
9.5.4	Guidelines for the Definition of Managed Objects (GDMO)	285
9.5.5	Standardized Managed Object Classes	289
9.5.6	Importance of the Information Model	290
9.6	The Communications Model: CMISE and CMIP	291
9.6.1	The Common Management Information Service Element (CMISE)	292
9.6.2	The Common Management Information Protocol (CMIP)	296

9.7	The Functional Model: Management Functions	299
9.7.1	Object Management Function	302
9.7.2	State Management Function	302
9.7.3	Relationship Management Function	304
9.7.4	Alarm Reporting Function	306
9.7.5	Event Reporting Management Function	308
9.7.6	Log Control Function	310
9.7.7	Security Alarm Reporting Function	312
9.8	Practices	314
9.9	Extensions and Enhancements	317
9.10	Observations	317
 Chapter 10. The Application Layer		 319
File Transfer, Access and Management (FTAM)		
10.1	Standards Overview	319
10.2	Overall Model	320
10.3	The Virtual File Store (VFS)	321
10.3.1	File Structure	321
10.3.2	Access Contexts and Constraint Sets	322
10.3.3	Actions on the Filestore	324
10.3.4	Document Types	328
10.4	Service and Protocol Characteristics	329
10.5	FTAM Operation	336
10.5.1	FTAM Regime	336
10.5.2	File Selection Regime	337
10.5.3	File Open Regime	340
10.5.4	Bulk Data Transfer Regime	340
10.5.5	Checkpointing, Recovery, and Restart	342
10.6	Practices	343
10.7	Extensions and Enhancements	344
10.8	Observations	345
 Chapter 11. The Application Layer		 347
Other OSI Applications		
11.1	Virtual Terminals	347
11.1.1	Model and Concepts	347
11.1.2	Service and Protocol Overview	349
11.2	Job Transfer and Manipulation (JTM)	351
11.2.1	Model and Concepts	351
11.2.2	Service and Protocol Overview	352
11.3	Electronic Data Interchange (EDI)	353
11.4	Distributed Transaction Processing (DTP)	355
11.5	A Note on OSI Security	358
 Chapter 12. Realization		 361
12.1	Towards Interoperable Implementations	361
12.1.1	Are "Open" Standards Too Open?	361
12.1.2	The Bottom Line: Interoperable Implementations	362
12.2	Functional Profiles	363
12.2.1	What Are Functional Profiles?	363

12.2.2	NIST Implementation Agreements	365
12.2.3	US Government OSI Profile (US GOSIP)	366
12.2.4	UK Government OSI Profile (UK GOSIP)	367
12.2.5	Canadian Open Systems Application Criteria (COSAC)	368
12.2.6	Manufacturing Automation Protocol (MAP)/Technical Office Protocol (TOP)	368
12.2.7	European Workshop on Open Systems (EWOS)	369
12.2.8	International Standardized Profiles (ISP)	370
12.3	OSI Implementation	372
12.3.1	The Essence: Generic Multilayer Software Architecture	373
12.3.2	The Reality: Upper Layer Implementation Considerations	376
12.3.3	OSI Conformance Testing	381
12.3.4	Interoperability Testing	384
12.4	Coexistence and Migration	385
12.4.1	Coexistence: The Reality of Today's Environment	385
12.4.2	Planning for Migration	387
12.4.3	Observations	388
 Chapter 13. What's Next?		 391
13.1	Standards Trends	391
13.1.1	The Evolving Application Layer Structure	392
13.1.2	Distributed Transaction Processing (DTP)	392
13.1.3	Object Orientation	392
13.1.4	Importance of Network Management	392
13.1.5	Open Distributed Processing (ODP)	393
13.2	Technology Trends	394
13.2.1	Emphasis on Packaging and Integration	394
13.2.2	Use of Object-Oriented Computing	394
13.2.3	Application Portability	395
13.3	Remarks: Beyond Mere Protocols	395
 Appendix A. Major Upper Layer Standards		 397
 Appendix B. Suggested Reading List		 407
 Appendix C. Acronyms		 411
