Preface	xi
Copyright acknowledgments	xiii
1 Introduction	1
1.1 Defining the problem	1
1.1.1 Background	1
1.1.2 'On the economy of machinery and manufacture'	2
1.1.3 The 19th century view	3
1.1.4 The late 20th century view	6
1.1.5 Looking towards the 21st century	10
1.2 Accepting the challenge	12
1.2.1 What is design?	12
1.2.2 Educational and cultural background	14
1.2.3 Procedure	15
2 Total resource concept	17
2.1 The need for a total resource concept	17
2.2 Energy resources	20
2.3 Raw material resources	23
2.4 Human resources	29
2.5 Creativity	32
2.5.1 Definitions	32
2.5.2 Bridging the gap	33
2.5.3 Michael Faraday	34
2.5.4 Analysis	35
2.5.5 Synthesis	36
2.5.6 Methodical creativity	37
3 Design	41
3.1 Definition and scope	41
3.2 Some basic aspects of methodology	45
3.2.1 Preferred numbers	45
3.2.2 Flow diagrams for structured formulation of the design process	47

	3.2.3 Schematic tabulation approach to choice	51
	3.2.4 Illustrations from rotating electrical machine design	55
3.3	Standards	
	3.3.1 Introduction	61
	3.3.2 The nature of Standards	61
	3.3.3 Reliability and safety	64
	3.3.4 International aspects	67
	3.3.5 Developing Standards	69
3.4	Quality Assurance	70
	3.4.1 Definition of subject matter	72
	3.4.2 ISO 9000: 1987 Series of Standards	72
	3.4.3 Comments on the technical content of ISO 9001: 1987	74
	3.4.4 Quality assurance level	80
	3.4.5 Design assurance	81
3.5	Real cost	86
	3.5.1 Economic factors	89
	3.5.2 Principal cost factors: user	89
	3.5.2.1 General	92
	3.5.2.2 Environmental	92
	3.5.2.3 Outage	96
	3.5.3 Principal cost factors: manufacturer	100
	3.5.4 End of life considerations	102
3.6	Product policy	104
	3.6.1 The market place	107
	3.6.2 Product strategy and tactics	107
	3.6.3 Commercial objectives	111
	3.6.4 Product features	115
	3.6.5 Product choice	119
3.7	Development	119
	3.7.1 Analysis	123
	3.7.2 From analysis to synthesis	123
	3.7.3 Synthesis	130
	3.7.4 Reprise	130
	3.7.5 An outline of the development of rotating electrical machine insulation	133
	3.7.6 Solving the terminal box problem	134
	3.7.7 The development of high performance AC generators	138
	3.7.8 Conclusions	140
3.8	Management	144
	3.8.1 General aspects	144
	3.8.2 Directing the design effort	144
	3.8.3 Project management	147
	3.8.4 Project integration	150
	3.8.5 Overview	155
		157

3.9	The development and application of submerged gas circulator motors for Advanced-Gas-Cooled Reactor Power Stations	157
3.9.1	Introduction	157
3.9.2	The Windscale AGR prototype	158
3.9.2.1	General	158
3.9.2.2	Design basis	159
3.9.2.3	Development programme	161
3.9.3	Implementation of concept	161
3.9.4	From Hinkley B/Hunterston B to Heysham II/Torness	166
3.9.4.1	Main features	166
3.9.4.2	Rotor design	167
3.9.4.3	Stator design	169
3.9.4.4	Components and penetrations	170
3.9.4.5	Bearings	171
3.9.4.6	Quality assurance	174
3.9.4.7	Vibration	174
3.9.4.8	Variable speed operation	175
3.9.4.9	Inlet guide vane control	176
3.9.4.10	Monitoring	176
3.9.4.11	Summary	177
3.10	Conclusions	177
4	Legal implications	178
4.1	Safety	178
4.1.1	Definition	178
4.1.2	Procedure	179
4.1.3	Certification	182
4.1.4	Approval	186
4.2	Product liability	186
4.3	Intellectual Property Rights	188
4.3.1	Introduction	188
4.3.2	The European Patent Convention and British Patent Law	189
4.3.3	The British Copyright and Design Rights Law	192
4.3.4	Legislation	195
5	Environmental implications	197
5.1	Economic climate	197
5.2	Government economic policy	198
5.2.1	General	198
5.2.2	Manufacturing	200
5.2.3	Technology	202
5.2.4	Material and energy resources	205
5.2.4.1	General	205
5.2.4.2	Pumping system	206
5.2.4.3	Energy policy	208

x	Contents	
	5.2.5 Human resources	212
	5.2.5.1 General	212
	5.2.5.2 Education	214
	5.2.5.3 Design education and training	215
6	Design in wealth creation — an overview	221
7	References	224
	7.1 General background	224
	7.2 Official British Reports	225
	7.3 Creativity	226
	7.4 General design topics	227
	7.5 Standards (national and international)	228
	7.6 Specific design aspects	229
	7.6.1 Miscellaneous	229
	7.6.2 Materials	230
	7.6.3 Rotating electrical machines	230
	7.6.4 Reliability and Safety	230
	7.6.5 Nuclear energy	231
	7.7 Patents	231
	7.8 Management	232
	Index	233
