Preface to the Third Edition	viii
Acknowledgements	ix
ONE Introduction	
The development of ideas	1
The development of human population and stages of cultural development	7
Hunting and gathering	10
Humans as cultivators, keepers and metal workers	14
Modern industrial and urban civilizations	22
TWO The Human Impact on Vegetation	
Introduction	25
The use of fire	26
Fires: natural and anthropogenic	28
The temperatures attained in fires	31
Some consequences of fire suppression	32
Some effects of fire on vegetation	33
The role of grazing	34
Deforestation	37
Secondary rain forest	42
The human role in the creation and maintenance of savanna	44
The spread of desert vegetation on desert margins	48
The maquis of the Mediterranean lands	53
The prairie problem	54
Post-Glacial vegetational change in Britain and Europe	56
Introduction, invasion and explosion	59
Air pollution and its effects on plants	65
Forest decline	68
Miscellaneous causes of plant decline	71
The change in genetic and species diversity	72

THREE Human Influence on Animals	
Introduction	76
Domestication of animals	76
Dispersal and invasions of animals	77
Miscellaneous causes of animal contractions and decline	81
Human influence on the expansion of animal populations	99
Animal extinctions	107
FOUR The Human Impact on the Soil	
Introduction	119
Salinity: natural sources	120
Human agency and increased salinity	121
The spread of salinity	125
Consequences of salinity	127
Reclamation of salt-affected lands	128
Lateritization	129
Accelerated podzolization and acidification	130
Soil structure alteration	132
Soil drainage and its impact	134
Soil fertilization	137
Fires and soil	138
Soil erosion: general considerations	138
Soil erosion associated with deforestation and agriculture	140
Soil erosion produced by fire	147
Soil erosion associated with construction and urbanization	148
Attempts at soil conservation	149
FIVE The Human Impact on the Waters	
Deliberate modification of rivers	154
Urbanization and its effects on river flow	169
Deforestation and its effect on river flow	172
The human impact on lake levels	176
Changes in ground-water conditions	179
Water pollution	182
Chemical pollution by agriculture and other activities	185
Deforestation and its effects on water quality	196
Thermal pollution	198
Pollution with suspended sediments	200
SIX Human Agency in Geomorphology	
Introduction	202
Landforms produced by excavation	204

## Contents

---

Landforms produced by construction and dumping	210
Accelerated sedimentation	213
Ground subsidence	218
Arroyo trenching	227
Accelerated weathering	229
Accelerated mass movements	231
Deliberate modification of channels	235
Non-deliberate river-channel changes	237
Reactivation and stabilization of sand dunes	242
Accelerated coastal erosion	246
The human impact on seismicity and volcanoes	256

### SEVEN The Human Impact on Climate and the Atmosphere

World climates	262
The CO <sub>2</sub> problem	264
Other gases	267
Aerosols	269
Thermal pollution	272
Vegetation and albedo	272
Forests, irrigation and rain	275
The possible effects of water diversion schemes	276
Lakes	276
Urban climates	277
Smoke haze and photochemical smog	282
Rainmaking and other methods of deliberate climatic modification	289
Air pollution: some further effects	292

### EIGHT The Future

The climatic future	305
The spatial patterning of change	309
Further consequences of a global warming	311
Projected sea-level rise	317

### NINE Conclusion

The power of non-industrial and pre-industrial civilization	322
The proliferation of impacts	323
Changes are reversible	325
The susceptibility to change	329
Human influence or nature?	332
Into the unknown	333

Guide to Reading	335
