

Table of contents

I. Introduction	1
II. The conceptual framework	2
III. Methodology	6
1. Measuring the pass-through	6
2. Estimation with bank categories	9
3. Outliers and incomplete time series	10
IV. Data	10
1. Bank lending rates	11
2. Selection of market interest rates	12
3. Mergers and takeovers	13
4. Aggregate time series	13
4. Bank classification	17
V. Econometric results	17
VI. Summary and conclusion	22
Bibliography	24
Annex A: Characteristics of interest rate reporting banks	27
Annex B: Fixed-effects (within-) estimation	29

Index of tables and figures

Tables

1.	Distribution of reported bank lending rates	12
2.	Distribution of balance sheet indicators across banks	16
3.	Classification of interest rate reporting banks	16
4.	Estimation results. One-month pass-through elasticities, loading coefficients and long-run relationships: Testing for equality across banks	19
A.1	Interest rate reporting banks in Germany by sector	27
A.2	Balance sheet composition, all banks versus interest rate reporting banks	27
A.3	Distribution of bank rate time series by bank category	28
A.4	Representation of interest rate reporting banks belonging to a banking federation	28

Figures

1.	Overnight interest rate and mark-up of current account credit rates	14
2.	Yield on German bearer debt securities outstanding and mark-up of long-term corporate lending rates	14
3.	Yield on German bearer debt securities outstanding and mark-up of five-year mortgage rates	15
4.	Lending rate response to a simulated change in the market rate	21
