

Table of Contents

1. A stylized fact and the literature	1
2. Real exchange rate determination for small countries	4
2.1 The hypothesis of Balassa and Samuelson	5
2.1 A simple model of real exchange rate determination	6
3. Panel estimation of exchange rate determination in transition countries	14
3.1 The data	15
3.2 Methods and results	16
3.2.1 Panels with annual data	16
3.2.2 Panels with quarterly data	19
3.2.3 The influence of the process of transition	22
4. Conclusions	25
Appendix 1. Some derivatives	27
Appendix 2. Data sources and calculations	27
References	29

List of Tables and Figures

Tables

Table 1. Fixed effects model, 10 countries, annual data, 1993 to 1999	17
Table 2. Fixed effects model, 8 countries (panel without Bulgaria and Romania), annual data, 1993 to 1999	17
Table 3. Fixed effects model, 8 countries (panel without Bulgaria and Romania), annual data, 1994 to 1999	19
Table 4. Fixed effects model, SUR, 8 or 7 countries respectively, quarterly data, 1994:1 to 2000:4	20
Table 5. Pooled mean group estimation, 8 or 7 countries respectively, quarterly data, 1994:1 to 2000:4	22
Table 6. Fixed effects model, annual data including privatization proxy, 1993 to 1999	24

Figures

Figure 1. CPI-based real effective exchange rates of central and east European transition countries	2
Figure 2. Relationship between real effective exchange rates of transition countries and world market real rates of interest	19
