A Masked Spectral Bound for Maximum-Entropy Sampling

<i>K.M. Anstreicher, J. Lee</i>	1
1 Introduction	1
2 The Masked Spectral Bound	2
3 The Minimization Method	3
4 Computational Results	5
5 Alternative Use of Oppenheim's Inequality	9
6 Conclusion	10
References	10

Some Bayesian Optimum Designs for Response Transformation in Nonlinear Models with Nonconstant Variance

<i>A.C. Atkinson</i>	13
1 Introduction	13
2 Transformations and First-Order Decay	14
3 Optimum Design for a Multivariate Response	15
4 Parameter Sensitivities and Transforming Both Sides	16
5 Two Consecutive First-Order Reactions	17
6 Efficiencies and Bayesian Optimum Designs	17
7 Discussion	20
References	21

Extensions of the Ehrenfest Urn Designs for Comparing Two Treatments

<i>A. Baldi Antognini</i>	23
1 Introduction	23
2 The Ehrenfest Urn Design	25
3 Symmetric Ehrenfest Design for Achieving Balance	26
4 Asymmetric Ehrenfest Design for a Generic Target	26
5 Ehrenfest-Brillouin Design	27
6 Some Convergence Properties	29
References	30

Nonparametric Testing for Main Effects on Inequivalent Designs

<i>D. Basso, L. Salmaso, H. Evangelaras, C. Koukouvinos</i>	33
1 Introduction	33
2 The IMP Test	35
3 A Comparative Simulation Study	37
4 Conclusions	39
References	40

Maximin Optimal Designs for a Compartmental Model

<i>S. Biedermann, H. Dette, A. Pepelyshev</i>	41
1 Introduction	41
2 Locally D -optimal Designs	43
3 Standardized Maximin D -optimal Designs	45
References	48

Optimal Adaptive Designs in Phase III Clinical Trials for Continuous Responses with Covariates

<i>A. Biswas, S. Mandal</i>	51
1 Introduction	51
2 Optimal Designs for Continuous Distributions	52
2.1 Response Distributions with one Unknown Parameter	52
2.2 Distributions Having more than one Parameter	53
3 Presence of Covariates	54
4 Conclusions	56
References	58

Optimal Designs for Regression Models with Forced Measurements at Baseline

<i>V. V. Fedorov, S. Leonov</i>	61
1 Introduction	61
2 Model	62
3 Optimal Designs for Model (1)	63
3.1 Equivalence of D -optimal Designs when only γ are Unknown .	63
3.2 Unknown γ and Population Variance Λ	66
4 Case when Baseline and Placebo Responses Coincide	67
4.1 Only Response Parameters γ Unknown	68
4.2 Unknown Parameters γ and Λ	68
References	68

Small Size Designs in Nonlinear Models Computed by Stochastic Optimization

<i>J.-P. Gauchi, A. Pázman</i>	71
1 Introduction	71
2 Optimality Criteria Expressed as an Integral	72
3 Density of the Estimator	73

4 The Penalty for the Boundary of Θ 74
 5 Accelerated Method of Stochastic Optimization 75
 6 Examples and Numerical Results 77
 References 78

Asymptotic Properties of Biased Coin Designs for Treatment Allocation

A. Giovagnoli 81
 1 Introduction 81
 2 Markovian Experiments 82
 3 Different Types of Biased Coin Designs 84
 3.1 BCD's for Comparing Two Treatments 84
 3.2 Biased Coin Design for Targeting a Quantile 85
 4 Asymptotic Properties of the Adjustable Biased Coin Designs 86
 5 Asymptotic Properties of Up-and-Down Designs 87
 References 88

Lower Bounds on Efficiency Ratios Based on Φ_p -Optimal Designs

R. Harman 89
 1 Introduction 89
 2 Bounds on the E_k -optimal Values Based on the Eigenvalues of Φ_p -optimal Information Matrices 91
 3 Bounds on the E -efficiency and the Minimal Efficiency Ratio of Φ_p -optimal Designs 91
 4 Example: the Minimal Efficiency Ratio of the D -optimal Design for the Model of Spring Balance Weighing 93
 5 Appendix - Proofs 94
 References 96

On a Functional Approach to Locally Optimal Designs

V.B. Melas 97
 1 Introduction 97
 2 Outline of the Problem 98
 3 Basic Analytical Results 99
 4 The Three-Parameter Logistic Distribution 101
 References 104

Optimal Design Criteria Based on Tolerance Regions

C.H. Müller, C.P. Kitsos 107
 1 Introduction 107
 2 β -expectation Bayesian Tolerance Regions 109
 3 Optimal Designs 112
 References 114

Simultaneous Choice of Design and Estimator in Nonlinear Regression with Parameterized Variance

A. Pázman, L. Pronzato 117

1 Introduction 117

2 Randomized Designs and Uniform Strong Law of Large Numbers .. 118

3 Penalized Weighted LS and Two-Stage LS Estimation 119

 3.1 Penalized Weighted LS Estimation 120

 3.2 Two-stage LS Estimation 121

4 Choosing the Design and the Estimator 122

References 124

Minimum Entropy Estimation in Semi-Parametric Models: a Candidate for Adaptive Estimation?

L. Pronzato, É. Thierry, É. Wolsztynski 125

1 Introduction 125

2 Minimizing Entropy 126

3 Adaptive Estimation in the Location Model 128

4 Adaptive Estimation in Nonlinear Regression 130

Optimal Designs for Contingent Response Models

H.S. Rabie, N. Flournoy 133

1 Introduction 133

2 The Contingent Response Model 134

3 The Design Problem 135

4 Locally D -optimal Designs 136

 4.1 Unequal Slopes $\beta_1 \neq \beta_2$; $\Theta = (\alpha_1, \beta_1, \alpha_2, \beta_2)$; $\theta = (\alpha_2, \beta_2, \mu, r)$ 136

 4.2 Equal Slopes $\beta_1 = \beta_2 = \beta$; $\Theta = (\alpha_1, \beta, \alpha_2)$; $\theta = (\alpha_2, \beta, \mu)$... 138

5 Locally c -optimal Designs 138

 5.1 Unequal Slopes $\beta_1 \neq \beta_2$; $\Theta = (\alpha_1, \beta_1, \alpha_2, \beta_2)$; $\theta = (\alpha_2, \beta_2, \mu, r)$ 139

 5.2 Equal Slopes $\beta_1 = \beta_2 = \beta$; $\Theta = (\alpha_2, \beta, \alpha_1)$; $\theta = (\alpha_2, \beta, \mu)$ 139

6 Conclusion 140

References 141

Bayesian D -Optimal Designs for Generalized Linear Models with a Varying Dispersion Parameter

E. Rodrigues Pinto, A. Ponce de Leon 143

1 Introduction 143

2 The Quasi-Likelihood 144

3 The Extended Quasi-Likelihood 145

4 The Model 146

5 The Equivalence Theorem 147

6 Cake Mix Example 148

7 Final Considerations 150
