**6 Predicting and Generating Time Series by Neural Networks:  
An Investigation Using Statistical Physics**  
Wolfgang Kinzel ..... 97

6.1 Introduction ..... 97

6.2 Learning from Random Sequences ..... 98

6.3 Generating Sequences ..... 100

6.4 Predicting Time Series ..... 103

6.5 Predicting with 100% Error ..... 105

6.6 Learning from Each Other ..... 107

6.7 Competing in the Minority Game ..... 108

6.8 Predicting Human Beings ..... 109

6.9 Summary ..... 110

References ..... 111

**7 Statistical Physics of Cellular Automata Models  
for Traffic Flow**  
Michael Schreckenberg, Robert Barlović, Wolfgang Knospe,  
Hubert Klüpfel ..... 113

7.1 Introduction ..... 113

7.2 Basic Measurements of Traffic Flow Simulations with CA Models ..... 114

7.3 Fundamentals of the NaSch Model ..... 115

7.4 The VDR Model ..... 117

7.5 Model with Anticipation ..... 121

7.6 Discussion and Conclusion ..... 123

7.7 Appendix: Simulating Pedestrian Dynamics and Evacuation Processes ..... 124

References ..... 126

**8 Self-Organized Criticality in Forest-Fire Models**  
Klaus Schenk, Barbara Drossel, Franz Schwabl ..... 127

8.1 Introduction ..... 127

8.2 The Spiral State and the SOC State ..... 128

8.2.1 Properties of the SOC State ..... 128

8.3 FFM with the Tree Density as Parameter ..... 131

8.3.1 Removal of Tree Clusters ..... 131

8.3.2 One-by-One Removal of Trees ..... 132

8.4 Conclusion ..... 132

8.5 Appendixes ..... 133

8.5.1 Exact Results in One Dimension ..... 133

8.5.2 Mean Field Theory ..... 136

8.5.3 Immunity ..... 138

References ..... 139

| Peter Grassberger and Walter Nadler .....  | 169 |
| 11.1 Introduction .....  | 169 |
| 11.2 An Example: A Lamb in front of a Pride of Lions .....                                       | 170 |
| 11.3 Other Examples .....  | 173 |
| 11.3.1 Multiple Spanning Percolation Clusters .....  | 173 |
| 11.3.2 Polymers .....  | 176 |
| 11.3.3 Lattice Animals (Randomly Branched Polymers) .....  | 180 |
| 11.4 Implementation Details .....  | 181 |
| 11.4.1 Depth First Versus Breadth First .....  | 182 |
| 11.4.2 Choosing $W_{\pm}$ .....  | 183 |
| 11.4.3 Choosing the Bias .....   | 183 |
| 11.4.4 Error Estimates and Reliability Tests .....   | 185 |
| 11.5 Diffusion Quantum Monte Carlo .....   | 187 |
| 11.6 Conclusion .....  | 188 |
| References .....   | 189 |

**12 Aperiodicity and Disorder – Do They Play a Role?**  
 Uwe Grimm . . . . . 191

12.1 Introduction . . . . . 191

12.2 The Ising Model . . . . . 193

    12.2.1 The Square-Lattice Ising Model . . . . . 193

    12.2.2 Phase Transitions and Critical Exponents . . . . . 194

    12.2.3 The Ising-Model Phase Transition . . . . . 196

    12.2.4 The Ising Quantum Chain . . . . . 197

    12.2.5 Effects of Disorder: Some General Remarks . . . . . 197

12.3 Heuristic Scaling Arguments . . . . . 198

12.4 Random Ising Models . . . . . 200

12.5 Aperiodic Ising Models . . . . . 201

    12.5.1 Aperiodic Tilings on the Computer . . . . . 201

    12.5.2 Ising Models on Planar Aperiodic Graphs . . . . . 204

    12.5.3 Aperiodic Ising Quantum Chains . . . . . 207

12.6 Summary and Conclusions . . . . . 208

References . . . . . 209
