An Introduction to Micromagnetics in the Dynamic Regime

Jacques Miltat, Gonçalo Albuquerque, and André Thiaville	1
1. Macrospin Dynamics	2
1.1. Foundations of Magnetization Precession	2
1.2. Link to Classical Mechanics and Electromagnetism	3
1.3. Introducing Damping	5
2. Viewing a Soft Thin Film as a Macrospin	6
2.1. Energy Functional	6
2.2. Asymptotic Solution Transverse Susceptibility in a Experiment ...	7
2.3. The Dynamical Astroïd and “No-Ringing” Critical Curves	9
2.4. Magnetization Dynamics Within a Lagrangian Formalism	12
3. Magnetization States at Submicron Sizes	13
3.1. Main Contributions to the Energy Density Functional in the Continuum Approximation	13
3.2. Energy Minimization	16
3.3. Applications to Rectangular Platelets with a 2:1 Aspect Ratio ..	17
4. Magnetization Dynamics in the Continuum Approximation	19
4.1. The Landau–Lifshitz–Gilbert Equation of Magnetization Motion	19
4.2. A Transverse Susceptibility Experiment in the Continuum Approximation	20
4.3. Energy Dissipation Versus Damping	23
4.4. Reversal of the “S” State: An Example	24
5. Conclusion	25
6. Suggestions for Further Reading	28
7. Appendix	29

Nonlinear Spinwaves in One- and Two-Dimensional Magnetic Waveguides

Andrei N. Slavin, Sergei O. Demokritov, and Burkard Hillebrands	35
1. Introduction	35
2. Basics of Nonlinear Spinwave Phenomena in Magnetic Films	38

3. Two-Dimensional Films and Quasi-One-Dimensional Waveguides 44

4. The Space- and Time-Resolved Brillouin Light-Scattering Spectrometer 46

5. Experimental Results 48

 5.1. Effect of the Antenna Aperture 48

 5.2. Spatial Self-Focusing: Spatial Solitons 50

 5.3. Spatiotemporal Self-Focusing: Spinwave Bullets 51

 5.4. Collisions of Spinwave Solitons and Bullets 54

6. Numerical Modeling of Nonlinear Spinwave Propagation 59

7. Conclusions 62

References 62

Spinwaves in Laterally Confined Magnetic Structures

Sergey O. Demokritov and Burkard Hillebrands 65

1. Introduction 65

2. Preparation of Patterned Magnetic Structures 66

3. Spin-Wave Spectrum of Magnetic Wires and Dots 68

4. The Brillouin Light Scattering Technique 71

5. Arrays of Wires 74

6. Arrays of Dots 82

7. Conclusions 89

References 89

Stroboscopic Microscopy of Magnetic Dynamics

Mark R. Freeman and Wayne K. Hiebert 93

1. Historical Overview 93

2. Experimental Details 95

 2.1. Pulsed Optical Source 96

 2.2. Transient Magnetic Excitation 97

 2.3. Microscope and Polarization Imaging 99

 2.4. System Operation 101

 2.5. New Opportunities in Optical Imaging 105

3. Discussion of Representative Results 107

 3.1. Relaxation, Resonance, and Small Angle Excitation 107

 3.2. Dynamic Reversal and Large-Angle Excitation 113

 3.3. Magnetic Device Characterization and Nonrepetitive Processes . . 117

4. Summary and Prospects 119

 4.1. Solid Immersion Lens and Confocal Microscopy 119

 4.2. Alternative Time-Resolved Magnetic Microscopies 120

Dynamics of Magnetization Reversal: From Continuous to Patterned Ferromagnetic Films

Jacques Ferré	127
1. Introduction	127
2. Experimental Techniques	130
3. Overview of Field-Induced Magnetization Dynamics	131
3.1. Experimental Facts	131
3.2. Magnetic Aftereffect	132
3.3. Dynamics the Hysteresis Loop	135
4. Reversal Processes	136
4.1. The Nucleation Process	136
4.2. Domain Wall Motion	136
5. Numerical Simulations	141
5.1. General Considerations	142
5.2. Micromagnetic Simulations	143
5.3. Monte Carlo Simulations in a Nonhomogeneous Film	144
5.4. Simulations in a 2-D Random-Field Ising Model	145
5.5. Limitations of Simulations	145
5.6. Motion of an Interface in a Disordered Medium	146
6. Magnetisation Reversal Dynamics in a Quasi-Perfect Ultrathin Film	147
6.1. Domain Nucleation	148
6.2. Domain Wall Propagation	150
7. Magnetisation Reversal Dynamics in Nanostructures	152
7.1. General Remarks	152
7.2. Magnetisation Reversal in Small Elements	153
7.3. Magnetisation Reversal in Noncoupled Dot Arrays	154
7.4. Magnetisation Reversal in Coupled Dot Arrays	156
8. Conclusion	158
