

# Contents

<b>1. Theories and Models: a Philosophical Overview</b> . . . . .	1
1.1 Introduction . . . . .	1
1.2 The Syntactic vs. the Semantic View . . . . .	2
1.3 Conceptions of Models . . . . .	11
1.4 Models and Semantics: a Hybrid View . . . . .	16
1.5 Semantic View and Theory Testing (Confirmation) . . . . .	22
1.6 Semantic View and Theory Reduction . . . . .	26
1.7 Semantic View and Structural Explanation . . . . .	34
<b>2. Thermostatistics</b> . . . . .	39
2.1 Introduction . . . . .	39
2.2 Thermometry . . . . .	41
2.3 The Motive Power of Heat vs. Conservation Laws . . . . .	47
2.4 Energy vs. Entropy . . . . .	63
2.4.1 The Syntax of Thermodynamics . . . . .	65
2.4.2 The Semantics of Thermodynamics . . . . .	66
<b>3. Kinetic Theory of Gases</b> . . . . .	81
3.1 A Random Walk Model for Diffusion . . . . .	81
3.2 The Maxwell Distribution . . . . .	87
3.3 The Boltzmann Equation . . . . .	92
3.4 The Dog-Flea Model . . . . .	106
<b>4. Classical Probability</b> . . . . .	113
4.1 Different Models for Probability . . . . .	113
4.2 From Gamblers to Statisticians . . . . .	115
4.3 From Combinatorics to Analysis . . . . .	127
4.4 From Here to Where? . . . . .	144
<b>5. Modern Probability: Syntax and Models</b> . . . . .	153
5.1 Quiet and Quaint No More . . . . .	153
5.2 From Hilbert's 6th Problem to Kolmogorov's Syntax . . . . .	156
5.3 Shannon's Entropy . . . . .	175
5.4 The Transcendence of Randomness . . . . .	188

<b>6. Modern Probability: Competing Semantics</b> .....	199
6.1 Von Mises' Semantics .....	199
6.2 Algorithmic Complexity and Randomness .....	205
6.3 De Finetti's Semantics .....	215
<b>7. Setting-up the Ergodic Problem</b> .....	237
7.1 Boltzmann's Heuristics .....	237
7.2 Formal Responses: Birkhoff/von Neumann .....	250
<b>8. Models and Ergodic Hierarchy</b> .....	261
8.1 Mixing Properties .....	262
8.2 K-Systems .....	268
8.3 Dynamical Entropy .....	278
8.4 Anosov Property .....	284
<b>9. Ergodicity vs. Integrability</b> .....	295
9.1 Is Ergodicity Generic? .....	295
9.2 Integrable Systems .....	301
9.3 A Tale of Two Models: Approximation or Error? .....	304
9.4 The KAM Tori .....	310
9.5 Conclusions and Remaining Issues .....	317
<b>10. The Gibbs Canonical Ensembles</b> .....	331
10.1 Classical Settings .....	331
10.2 Quantum Extensions .....	346
10.2.1 Traditional Formalism .....	346
10.2.2 The KMS Condition .....	349
10.3 Early Successes .....	357
<b>11. Phase Transitions: van der Waals to Lenz</b> .....	373
11.1 Introduction .....	373
11.2 Thermodynamical Models .....	375
11.3 Mean-Field Models .....	380
11.3.1 The van der Waals Model of Fluids .....	380
11.3.2 The van der Waals Equation from Statistical Mechanics .....	386
11.3.3 The Weiss Model for Ferromagnets .....	389
<b>12. Ising and Related Models</b> .....	393
12.1 The 1-d Ising Model. No-Go Theorems .....	393
12.2 The 2-d Ising Model .....	403
12.3 Variations on the Theme of the Ising Model .....	419
12.3.1 Variations on the Interpretation of the Variables .....	419
12.3.2 Variations Involving the Range of the Variables .....	421
12.3.3 Variations Modifying the Domain or Range of the Interactions .....	425

<b>13. Scaling and Renormalization</b> .....	431
13.1 Scaling Hypotheses and Scaling Laws .....	431
13.2 The Renormalization Program .....	435
<b>14. Quantum Models for Phase Transitions</b> .....	451
14.1 Superconductivity and the BCS Model .....	451
14.1.1 Preliminaries to the BCS Model .....	451
14.1.2 The Essentials of the BCS Model .....	457
14.1.3 Superconductivity after BCS .....	461
14.2 Superfluidity and Bose–Einstein Condensation .....	462
14.2.1 The Early Days .....	462
14.2.2 Modern Developments .....	467
<b>15. Approach to Equilibrium in Quantum Mechanics</b> .....	477
15.1 Introduction .....	477
15.2 Master Equations .....	479
15.3 Approach to Equilibrium: Quantum Models .....	495
<b>16. The Philosophical Horizon</b> .....	519
16.1 General Issues .....	519
16.2 Model-Building: Idealization and Approximation .....	521
16.3 Model-Building: Simulation .....	526
16.4 Recapitulation .....	532
<b>A. Appendix: Models in Mathematical Logic</b> .....	539
A.1 Syntax .....	539
A.2 Semantics .....	544
<b>B. Appendix: The Calculus of Differentials</b> .....	553
B.1 Green’s Theorem .....	553
B.2 Stokes’ and Gauss’ Theorems .....	559
B.3 Higher Differentials .....	565
<b>C. Appendix: Recursive Functions</b> .....	575
<b>D. Appendix: Topological Essences</b> .....	585
D.1 Basic Definitions .....	585
D.2 Examples from Functional Analysis .....	590
D.3 Separability and Compactness .....	600
D.4 The Baire Essentials .....	605
<b>E. Appendix: Models vs. Models</b> .....	607
E.1 Models in Wigner’s Writings and in the Third Wigner Symposium .....	607
E.2 A Search for Precedents .....	608

XIV Contents

E.3 The Case .....	611
E.4 Closing Statements .....	613
<b>References</b> .....	<b>617</b>
<b>Citation Index</b> .....	<b>677</b>
<b>Subject Index</b> .....	<b>693</b>
